Mr. J. Paton, borough surveyor of Plymouth, was, on Monday last, formally appointed "acting borough surveyor" of Greater Plymouth—the borough having been enlarged by the inclusion of the whole areas of Devonport and Stonehouse—"until further orders." The other chief officers were dealt with similarly.

Mr. T. L. Brown, of the burgh surveyor's offices, Arbroath, has been appointed burgh surveyor of that town in succession to Mr. P. C. Smith, now burgh engineer of Dunfermline. Mr. Brown, who is only twenty-nine years of age, is a native of Hawick, where his father, Mr. Charles Brown, filled the position of burgh and water engineer.

Mr. J. Richard Heath has been appointed borough surveyor of Swansea. Mr. Heath is thirty-six years of age, is a member of the Institution of Municipal and County Engineers, and holds the diploma of that institution, and is also a member of the Royal Sanitary Institute. He was articled to Mr. F. Bettany, borough engineer and surveyor of Burslem, and on the expiration of his articles he was appointed an assistant in that office, and served in that capacity for a period of two years. At the end of that time he was appointed deputy borough surveyor of Burslem, which position he held for a period of over ten years. On the amalgamation of the six Pottery towns taking place over four years ago, Mr. Heath was appointed deputy borough surveyor to the newly constituted county borough of Stoke-on-Trent, and has held this appointment up to the present. The county borough of Stoke-on-Trent was formed by the amalgamation of the county borough of Hanley, the boroughs of Burslem, Stoke-on-Trent and Longton, and the urban districts of Tunstall and Fenton. Mr. Heath has been actively engaged in bringing into working order the arrangements of the six separate towns, including the entire reorganisation of the borough surveyor's staff, and has thus had a unique and valuable experience in dealing with many and difficult problems which have necessarily arisen in connection with this work.

FOR OTHER ADVERTISEMENTS

See End of Paper.

CITY SURVEYOR in the South of England has vacancy for Articled Pupil.—Waterworks and sewage disposal works.—Box 1,485, office of THE SURVEYOR, 24 Bride-lane, Fleet-street, London, E.C. (2,087)

EAST SUSSEX COUNTY COUNCIL.

Wanted temporarily, a Surveyor and Draughtsman in the County Surveyor's Department.

The person appointed must have a good knowledge of Surveying, Levelling, &c., and preference will be given to one who has had experience in the use of the Theodolite.

Applications, stating age, qualifications, &c., and accompanied by not more than three recent testimonials, to be sent to the undersigned on or before Tuesday, November 24, 1914.

Salary £78 per annum.

F. J. WOOD, Associate Member of the Institution of Municipal and County Surveyors.

County Hall,
Lewes.
November 11, 1914. (2,086)

BARKING TOWN URBAN DISTRICT COUNCIL.

TO ROAD CONTRACTORS.

RIPPLE-ROAD WIDENING No. 1 (EASTBURY ESTATE).

The above Council invite Tenders for the execution of the undermentioned works:—

(*a*) For the construction of about 580 lin. yds. of 9-in. diameter glazed stoneware pipe sewer, and about 640 lin. yds. of 9-in. and 12-in. diameter glazed stoneware pipe surface-water drain, together with manholes, &c.

(*b*) For the widening of the carriageway and construction of new footway, kerbing, channelling, and appurtenant works, for a distance of about 700 lin. yds.

Plans may be seen and copies of Conditions of Contract, Specification, Bills of Quantities, and Forms of Tender, may be obtained upon application to Mr. R. A. Lay, ASSOC.M.INST.C.E., Acting Surveyor to the Council, Public Offices, Barking, on and after the 18th inst.

The Contractor whose Tender is accepted will be required to enter into a Contract under seal with sufficient sureties for the due performance thereof, to pay the trade union rates of wages in force in the district, to observe the recognised hours of labour, and to employ as far as possible workmen resident in the district of Barking Town.

Tenders, endorsed "Ripple-road Widening, No. 1," may be delivered to the Council at 7 p.m. on Tuesday, 24th November next, or be sent by post, or delivered, to the undersigned by the date and time mentioned.

The Council reserve the right to accept a separate Tender for each of the above sections, and do not bind themselves to accept the lowest or any Tender.

(By order)
E. A. PRATT,
Acting Clerk to the Council.

Public Offices,
Barking.
November 11, 1914. (2,085)

EAST SUFFOLK COUNTY COUNCIL.

MAIN ROADS.

TENDER FOR TAR OR SURFACE TARRING.

The above Council invite Tenders for the supply of Refined Tar, Dehydrated Coal Tar, or Tar supplied direct from Gasworks delivered to the various Railway Stations, Wharves, Docks, &c., within the County in such quantities and at such times as directed during the year ending 31st March, 1916.

Specification and Form of Tender can be obtained on application to the undersigned, and applicants are requested to state for which grade of Tar they wish to tender.

The Council does not bind itself to accept the lowest or any Tender, and reserves the right to accept Tenders for any portion of the requirements.

Tenders, endorsed "Tar," must be delivered at the County Hall, Ipswich, on or before 10 a.m. on the 23rd day of November, 1914.

(Signed) W. JERVIS,
County Road Surveyor.

County Hall,
Ipswich.
November 12, 1914. (2,088)

USES OF THE HYDRAULIC MINING CARTRIDGE.*

B. James Tonge, M.I.M.E., F.G.S.

The difficulty of removing rock and other material in places where the shock attendant upon blasting operations would be damaging and dangerous to surrounding strata or structures is one which has not hitherto been thoroughly overcome.

The enormous initial power generated by the sudden decomposition of explosive substances has enabled great quantities of natural or artificial beds to be displaced, and a great portion of the work of the civil and mechanical engineer is involved either directly or indirectly in operations of this kind. The objection to the use of explosives, however, in many circumstances is that the effect of blasting can seldom be harnessed or controlled so as to prevent the disintegration of the material beyond the area which it is desired to dislodge. . . . Pulverisation by explosives involves enormous waste of power, as it usually represents great excess of explosive charge; in other words, the use of explosives must always entail the risk of accident through an insufficient charge or the production of misapplied energy.

The hydraulic mining cartridge differs from all other mechanical substitutes for blasting. It is not worked on the principle of the wedge, and consequently the power expended in forcing a wedge into the hole is saved. Instead of employing a wedge, the disrupting effect is obtained by means of a number of small rams or presses working at right angles from a strong cylinder of steel. In order to make these rams more effective in their operation, by obtaining a greater travel from their original position, they are made of a duplex or telescopic form, one part sliding and fitting upon the other. In some cartridges these pistons operate from each side of the cylinder alternately, thus greatly increasing the travel. To retain the rams in position a sliding plate is used fitting in grooves in the barrel. This is so formed and secured that it is perfectly rigid and firm when the machine is in operation, but is readily removable if it is desired to detach or replace any of the rams. By a suitable arrangement of passages a communication is made between each of the rams, whereby simultaneous action is obtained. Machines are made of various diameters—viz., 2½ in., 3¼ in., and 4 in.—and of various lengths, say with 8, 6, or 5 rams, the smaller diameters having the larger number of rams. Pressures of 3, 4, or 5 tons per square inch are used, so that machines are made to withstand great stresses.

The Pump.—The cartridge is operated by means of a pump, to which it is directly connected by a pipe. The pump is of special design. At the commencement of the supply of water it is desirable that the latter should be supplied in such quantities as to fill up quickly all the spaces within the rams and passages, while at the same time allowing the operator, when the rams begin to move and the pressure to increase, to supply a less quantity of water, but at a greater pressure, to complete the final operations of the rams.

In practice it is found possible so to arrange the hydraulic cartridge holes as to enable much greater areas of material to be moved than could be done with a large quantity of explosive, while in some cases the displacement has been greatly extended by the use of small-sized boreholes towards which the slowly developing line of least resistance can assert itself. In other words the power exerted by the rams can be controlled, after a little experience, so that the full pressure can be usefully applied.

Use in Reservoirs, Docks, Harbours, and Canals.

The operations in these places have all certain features in common which allow of their being classed together, and they may be divided into three classes.

(a) In Open Trenches.—The difficulty of removing rock from confined spaces where it is necessary that no shock or vibration should be transmitted to surrounding strata is a very vital one. The introduction of the hydraulic cartridge into this class of work will, it is hoped, help to solve this question. During the past few years it has been thoroughly tested under most varied conditions and in all classes of deposits.

The work in trenches usually proceeds as follows: A number of holes are drilled, say, 2 ft. 3 in. back from the edge of the rock, about 5 ft. apart, and 3 ft. to 5 ft. deep, according to circumstances. The holes are, when possible, bored by a power drill operating from a tripod. By these means suitable holes, of diameters up to about 5 in., can be quickly drilled. The centre hole is pumped first and provides a loose end for those on each side. These are pumped in turn until the fast side is reached, where it may be found advisable to drill a small 1 in. diameter hole, say 9 in. from the fast side, to enable the cartridge to break the rock as close to the fast side as possible. Sometimes this method is varied by pumping off two centre holes simultaneously and placing the last holes 2 ft. from the fast side, leaving out the small diameter holes. In this case the holes could be 2 ft. 6 in. from the front edge, and two machines would be required.

Taking a trench 15 ft. in width and holes 3 ft. in depth, the first method would necessitate three cartridges and two 1-in. holes to get 100 cub. ft. of rock; while the second method would require only four cartridge holes to remove 112 cub. ft. During the operation of the machine it is possible to see the rock slowly fracturing at each turn of the handle. Work of this character has been done by the cartridge in connection with the Derwent Valley waterworks, and the Cwm Taff reservoir, Liverpool Corporation, and tests are now being made for the Aberdilery water scheme.

(b) Under Water.—The appliance has been used in many cases under water, chiefly to remove rock, either from the sides of canals or from the sides of harbours and docks, where it was obviously impossible to use explosives, the machine being operated from the bank or from pontoons.

In the Alexandra Docks at Newport, and in the new dock at Swansea, the appliance has been used to break up ledges of rock occurring in the vicinity of walls which would have been damaged by the use of explosives. The holes were put in and the cartridges inserted under water by divers, and pressure was applied from the pump placed on a raft on the water.

(c) Dock or Harbour Walls.—Hydraulic machines have been used for some years at the Dover Harbour works for the purpose of detaching the large concrete blocks used in the harbour walls. These blocks are of great size and weight. By inserting the drill hole along the bottom of the block and placing the cartridge about half-way under it, the whole mass is slightly lifted and tilted without breaking, and being thus released from its bed is easily lifted on to a wagon by a crane. Machines are being used for a similar purpose in other docks.

Excavation of Foundations.

The question of the removal of concrete foundation beds by a method which would not involve explosive blasts and would avoid the slightest damage to machinery or buildings has been carefully studied recently by the writer, and had never been thoroughly solved until extended trials in all parts of the British Isles had been made.

The effect of powerful hydraulic pressure upon concrete is interesting. In the case of sandstone and shales there is comparatively slight crushing of the rock before the full pressure of the rams has the effect of causing the mass to bend; considerable pumping and consequent travel of the rams is then necessary before the rock finally begins to crack and break away. With concrete, however, there is usually a perceptible interval during which the rams are crushing or compressing the material, and no movement is noticeable; after this is accomplished a few more thrusts of the rams cause the whole mass to break up without any indications of bending. It may still be necessary to continue to apply pressure and to increase the size of the breaks in the mass, but the greatest shattering effect will have been accomplished at the first disclosure of the cracks, the pressure required to break the mass afterwards gradually diminishing.

In such material explosives invariably have the effect of "hacking a way through" by the shortest direction to the unsupported edge, pulverising the mass, but failing to take advantage of pressure gently applied, by means of breaks, which spread and widen, and to utilise the weight of the concrete itself to increase the scope of the operation. Numerous experiments in this class of work show that 60 to

* From a paper read at the last meeting of the Society of Engineers.

diameter holes 3 ft. away and in line, to which the [illegible] could be broken all across by two cartridges and two small diameter holes, amounting to 124 cub. ft. of material.

[illegible] material per thrust, the vertical small diameter holes [illegible] moved per thrust is 67 cub. ft. The effect of lifting up is to break a larger quantity of material and in much larger pieces than is the case with vertical holes. With the latter the concrete is found to be very well broken up, and ready for handling without the further use of tools. Horizontal holes, on the other hand, are more suitable for beds where foundation bolts are embedded in the concrete.

[illegible] for this machine as the removal of concrete beds. The following recent case is a typical example. At a municipal electricity works the cartridge was used to remove the main engine-room foundation bed. Within a radius of 10 yds. from the scene of operations, many of them within the same building, were very valuable Lancashire and water tube boilers, electrical and steam engines, and the main switch board and cables. Needless to say, the work had to be carried out with as little vibration or shock as possible. Explosives were out of the question, and the ordinary method of hammer and wedge would have proved an extremely long, tedious, and expensive process. The bed consisted of a solid mass 14 ft. 6 in. wide, 26 ft. long, and 10 ft. deep, composed of hard cement concrete for the most part, and reinforced with numerous foundation bolts.

It was considered unnecessary to instal power drills on the work, and the holes in consequence were drilled by hand. The majority of these were horizontal, and were put in by means of an ordinary twist drill and ratchet machine by two men. These men could drill fairly easily 3 ft. per hour. One hydraulic cartridge only was employed. The general procedure was to keep the drillers at work putting in holes all round the side of the concrete, the machine following when two or more holes were ready. The holes were on an average 6 ft. 6 in. apart, and from 2 ft. 6 in. to 3 ft. below the surface in the case of horizontal holes. The vertical holes were drilled only in special places to trim down the vertical edge, and in these cases the measurements were about the same. The employment of shot holes to form a breaking point was considered unnecessary.

The *débris* thus broken was removed by a gang of six men, who were kept busily employed with pick and shovel, and wedges were necessary only to break up the larger pieces to a suitable size for handling. It was found that the amount of material broken up in the course of three or four shots was quite sufficient, in consequence of the limited and cramped working area, to keep the men busily employed for the rest of the day. Had it been possible to place more men on the bed there is no reason why a much better output should not have been attained, but in this case it would have been necessary to break open the wall in several places, which was not considered advisable. The whole bed, weighing approximately 200 tons of concrete, was removed in twenty working days. About sixty shots were necessary to complete the work, making an average of nearly 3½ tons per thrust.

The cost of the work was as follows: Labour per day, including operator, drillers, navvies, and foremen, £2 15s.; amount of material removed—average 10 tons per day, 4s. 9d. per ton.

The above cases will be sufficient to show that with a mechanical substitute for blasting capable of exerting a total pressure of 150 or 200 tons upon rock, coal, concrete, masonry, &c., and in such manner as to cause no shock to the material in which it is operated, there should be possibilities of usefulness to engineers not previously contemplated.

SOME RECENT PUBLICATIONS.*

Graphic and Structural Design. By H. D. Hess, M.E. Price 12s. 6d. net. London. Chapman & Hall, Limited.

The author of this very practical and decidedly useful work is Professor of Machine Design at Sibley College, Cornell University, was formerly designer and computer for the mechanical department of the Pencoyd Ironworks and the American Bridge Company, and is a member of the American Society of Mechanical Engineers. The book is intended for the author's [illegible] engineering degree, the problems chosen [illegible] "the border line between [illegible] and the better engineering," and the determination of stresses made, not only graphically, but also by other usual methods. The author states that he is indebted to many manufacturers, and to *Engineering News* especially among periodicals. He hopes that his book may serve, not only as a text-book, but also as "a satisfactory reference book for designers whose work is not too highly specialised."

The general character of the book may be indicated by stating that it is what the reader might expect from the above premises, the author being intelligent and painstaking. Being American in its scope, it deals less with field engineering and more with works engineering than would be the case if a book with the same title were written for British engineers. We find, accordingly, that a considerable amount of space is devoted to mill buildings, chimneys, works equipment and storage bins. The first nineteen pages are occupied with a good summary of the properties of important materials (not including wrought iron). The next three chapters deal respectively with "graphics," treated briefly and generally, "stresses in structures," with studies of force polygons, and "the algebraical determination of stresses," chiefly with respect to trusses. A short but useful chapter on "influence diagrams" follows, and the author then proceeds to consider the design generally of tension and compression pieces, beams and columns. This brings us to p. 100. The next ninety pages are occupied with specific applications of the methods of design, the subjects being girders for conveyors, trusses, bents and towers; a steel mill building; a railway plate girder; crane frames; and girders for travelling cranes. The next thirty-four pages are occupied by a good summary of the main elements of reinforced-concrete design, followed by a short chapter on "foundations."

The next chapter—on chimneys—includes three practical examples—brick, steel, and reinforced concrete. A chapter of sixteen pages on retaining walls is followed by one of twenty-five pages on "bins," in which the determination of stresses, graphically and by formulæ adapted to various conditions, is carefully explained. The next two chapters—on "shop floors" and "walls and roofs"—include a considerable amount of detailed designing, the designs for window frames being an unexpected but perhaps useful feature. Specifications for structural steelwork are then given, with considerable detail, and are followed by other useful specifications. The book concludes with a series of 195 practical problems, the answers to which are given separately. There is an index of ten pages. We do not find "wrought iron" in the index, and it seems, therefore, that it is not considered a material of sufficient importance to be included in a work of this character. It should further be understood that the author has considered only a small range of materials, these being, no doubt, those of most importance from the American point of view. The diagrams, of which there are 430, including members of groups of diagrams, are well drawn, and well suited to their purpose. For British readers the book may be recommended as dealing with a range of subjects of much practical importance, and furnishing a considerable number of practical examples of design by fairly simple methods.

Coast Sand Dunes (By Gerald O. Case, St. Bride's Press, Limited, 24 Bride-lane, E.C., price 5s.).—The rapid increase of sand wastes around our coasts is indeed a serious one, and Mr. Case has done a valuable work in the writing of this book.—*Southport Guardian.*

INSTITUTION OF MUNICIPAL AND COUNTY ENGINEERS.

President—Mr. J. S. PICKERING, M.INST.C.E., Borough Engineer, Cheltenham.

WEST MIDLAND DISTRICT.

A meeting will be held at Birmingham on Thursday, November 26th.

AGENDA.

5.30 p.m.—Meet at the Council House, Birmingham.

To elect Executive Committee for the ensuing year.

Discussion on paper by Mr. E. J. Goodacre, ASSOC.M.INST.C.E., assistant borough surveyor, Shrewsbury, entitled "Timber and its Relation to the Building By-laws."

F. C. COOK, ASSOC.M.INST.C.E.,
Hon. District Secretary.

Municipal Offices,
Nuneaton.

INSTITUTION OF MUNICIPAL ENGINEERS.

President—Mr. HORACE BOOT, M.I.E.E., M.I.MECH.E., Tunbridge Wells and Westminster.

President-Elect—Mr. W. H. MATTHEWS JONES, City Engineer and Surveyor, Chester.

ANNUAL MEETING IN LONDON.

The sixth annual general meeting will be held in London on Saturday, November 28th.

PROGRAMME.

11.45 a.m.—Meet in the Council Chamber, No. 4 Southampton-row, London, W.C.

12 noon.—Annual general meeting.
Minutes of last meeting.
Presentation of annual report of council.
Announcement of result of ballot for election of council for the year 1914-15.
Any other business.

1 p.m.—Adjourn for lunch.

2.30 p.m.—Re-assemble in Council Chamber.

2.45 p.m.—Presidential address.

Discussion on the following papers to be presented to the meeting:—

"A Plea for the Better Remuneration of Municipal Surveyors and Inspectors of Nuisances in Small Urban and Rural Districts," by G. Belson Chilvers, M.R.SAN.I. (member).

"Housing of the Working Classes," by Edward Whitwell (member).

"The Future Control and Maintenance of Rural Roads," by J. S. Wooddisse (member).

The papers will be taken as read, and advance copies may be obtained on application to the secretary, and will be forwarded as soon as the papers are in print.

B. WYAND,
39 Victoria-street, S.W. *Secretary*

APPOINTMENTS VACANT.

OFFICIAL AND SIMILAR ADVERTISEMENTS RECEIVED UP TO 4.30 P.M. ON THURSDAYS WILL BE INSERTED IN THE FOLLOWING DAY'S ISSUE, *but those responsible for their despatch are recommended to arrange that they shall reach* THE SURVEYOR *office by noon on* WEDNESDAYS *to ensure their inclusion in the weekly list of summaries. Such advertisements may, in cases of emergency only, be telephoned (City No. 1046) subject to later confirmation by letter.*

BOROUGH SURVEYOR AND INSPECTOR.—November 14th.—Corporation of Monmouth. £130 per annum.—Mr. Bickerton H. Deakin, town clerk.

SEWAGE WORKS MANAGER.—November 14th. Ashton-in-Makerfield Urban District Council. 50s. per week.—Mr. Albert Sykes, clerk, Council Offices.

ROAD FOREMAN.—November 16th.—Corporation of Birmingham. 40s.—45s. per week.—Mr. H. E. Stilgoe, city engineer and surveyor.

ROAD FOREMAN.—November 16th.—Corporation of Bootle. £3 per week.—Mr. J. S. Tumilty, town clerk.

CLERK OF WORKS.—November 16th.—Gellygaer Urban District Council. £2 5s. per week.—Mr. Frank T. James, clerk.

ENGINEERING ASSISTANT.—November 17th.—Hackney Borough Council. £130—£180 per annum.—Mr. N. Scorgie, borough engineer and surveyor, Town Hall, Hackney, N.E.

ROAD SURVEYOR.—November 20th.—Dore (Herefordshire) Rural District Council. £100 per annum.—Mr. R. Moore, clerk.

TEMPORARY ASSISTANT.—November 21st.—Kettering Urban District Council. £80 per annum.—Mr. John Bond, clerk.

TEMPORARY ENGINEERING ASSISTANT.—November 21st.—Corporation of Exeter. £4 4s. per week.—Mr. Thos. Moulding, city engineer and surveyor, Municipal Offices, Southernhay West, Exeter.

DISTRICT SURVEYOR OF ROADS.—November 21st.—Lancashire County Council. £200—£325 a year.—Mr. Harcourt E. Clare, clerk, County Offices, Preston.

CLERK OF WORKS.—November 24th.—West Suffolk County Council. £2 15s. per week.—Mr. W. Lionel Jenkins, county surveyor, Shire Hall, Bury St. Edmunds.

RESIDENT ENGINEER.—November 24th.—Easington Rural District Council.—Mr. W. G. W. Noble, acting clerk, Council Offices, Easington, Easington Colliery, Co. Durham.

SURVEYOR AND INSPECTOR.—November 24th.—Wimborne and Cranborne Rural District Council. £120 per annum.—Mr. M. Luff, clerk, Council Offices, Wimborne.

CLERK OF WORKS.—November 25th.—Petersfield Rural District Council. £2 10s. per week.—Mr. A. J. C. Mackarness, clerk.

HIGHWAY SURVEYOR.—November 25th.—Llanybyther Rural District Council. £45 per annum.—Mr. J. Ernest Lloyd, clerk, 28 High-street, Lampeter.

JUNIOR ENGINEERING ASSISTANT.—November 25th.—Corporation of Bolton. £65 per annum.—Mr. Samuel Parker, town clerk.

ROAD FOREMAN.—November 27th.—Cannock Urban District Council. 30s. per week, with house rent. Mr. R. Blanchard, engineer and surveyor, Council Offices.

ASSISTANT COUNTY SURVEYORS.—November 30th.—Cornwall County Council. £150—£200.—Mr. Christopher L. Cowlard, clerk, County Council Offices, Bodmin.

SURVEYOR.—December 5th.—Pontypool Rural District Council. £100 per annum. Mr. T. Watkins, clerk, Club Chambers, Pontypool.

CITY ENGINEER AND SURVEYOR.—January 31st, 1915.—Port-of-Spain Corporation. £725, inclusive of travelling allowance.—Mr. Joseph Arnold Lamy, town clerk, Town Hall, Port-of-Spain, Trinidad, B.W.I.

ASSISTANT SURVEYOR.—Corporation of Tenby.—Mr. B. Morley, borough surveyor.

ASSISTANT ENGINEER.—Lagos Municipal Board of Health, Nigeria. £300.—Crown Agents for the Colonies, Whitehall-gardens, London, S.W.

ASSISTANT ENGINEERS.—Public Works Department of the Government of the Gold Coast. £350—£400.—Crown Agents for the Colonies, Whitehall-gardens, London, S.W.

ROAD SURVEYOR.—Hipperholme Urban District Council. The Clerk, 4 Harrison-road, Halifax.

MUNICIPAL COMPETITIONS OPEN.

OFFICIAL AND SIMILAR ADVERTISEMENTS RECEIVED UP TO 4.30 P.M. SOUTHEND.—December 4th.—Schemes for a tuberculosis hospital, for the corporation. Premiums £100, £50, and £25.—Mr. E. J. Elford, borough engineer.

LIVERPOOL.—February 8th.—Designs for working-class dwellings, for the corporation. Premiums, £100, £50, and £25.—Mr. E. R. Pickmere, town clerk.

MUNICIPAL CONTRACTS OPEN.

OFFICIAL AND SIMILAR ADVERTISEMENTS RECEIVED UP TO 4.30 P.M. ON THURSDAYS WILL BE INSERTED IN THE FOLLOWING DAY'S ISSUE, *but those responsible for their despatch are recommended to arrange that they shall reach* THE SURVEYOR *office by noon on* WEDNESDAY *to ensure their inclusion in the weekly list of summaries. Such advertisements may, in cases of emergency only, be telephoned (City No. 1045) subject to later confirmation by letter.*

Buildings.

DURHAM.—November 14th.—For the erection of a dispensary, for the county council.—County Surveyor, Shire Hall, Durham.

KIRKCALDY.—November 14th.—For the erection of a sanatorium and other works, for the corporation.—Burgh Surveyor.

WELLS (Norfolk).—November 14th.—For the erection of twenty workmen's dwellings, for the urban district council.—Mr. H. Kennard, architect, 26 Great James-street, Bedford-row, London, W.C.

WAKEFIELD.—November 16th.—For the erection of [illegible] at the cattle market, for the corporation.—Mr. J. P. Wakeford, city surveyor.

DUNDALK.—November 16th.—For sinking a well and erecting a pump, for the rural district council.—Mr. P. Cahill, Francis-street, Dundalk.

GREETLAND.—November 16th.—For the erection of public lavatories and waiting-room, for the urban district council.—Messrs. R. Horsfall & Son, architects, 22A Commercial-street, Halifax.

WIGAN.—November 16th.—For the extension of the swimming bath, for the corporation.—Mr. A. T. Gooseman, borough engineer.

HORNSEY.—November 16th.—For the erection of an electric lighting station, for the corporation.—Mr. E. J. Lovegrove, borough engineer and surveyor.

EDINBURGH.—November 16th.—For the erection of garages, for the corporation.—Mr. J. A. Williamson, architect, Public Works Office, City Chambers, Edinburgh.

BRIGHTON.—November 17th.—For demolishing and rebuilding 83 Grand-parade, for the corporation.—Borough Surveyor, Town Hall.

GODSTONE.—November 17th.—For the erection of a cottage at the sewage works, and laying a sewer, for the rural district council.—Mr. T. C. Barralet, surveyor, Station-road, West Oxted.

BARNET.—November 17th.—For the erection of council offices and an underground convenience, for the urban district council.—Mr. W. B. Chancellor, engineer and surveyor.

HOVE.—November 18th.—For the construction of a public lavatory, for the corporation.—Borough Surveyor.

CHESTER-LE-STREET.—November 18th—December 16th.—For the erection of fifty houses, for the urban district council.—Messrs. Boyd & Groves, architects, Emerson Chambers, Newcastle-upon-Tyne.

GLOUCESTER.—November 19th.—For the erection of a tuberculosis block, for the corporation.—Mr. R. Read, city surveyor.

CAMBRIDGE.—November 20th.—For additions to the Guildhall, for the corporation.—Mr. J. Julian, borough surveyor.

STAMFORD.—November 20th.—For the erection of twenty-four cottages, for the corporation.—Mr. F. R. Ryman, borough engineer.

HAMPSHIRE.—November 20th.—For the erection of a new school, for the county council.—Mr. A. L. Roberts, architect, The Castle, Winchester.

BARNSLEY.—November 21st.—For the erection of a school, for the Education Committee.—Mr. E. W. Dyson, architect, Regent-street, Barnsley.

HUDDERSFIELD.—November 21st.—For the construction of an open-air school and approach roads, for the corporation.—Mr. K. F. Campbell, borough engineer and surveyor.

BRIXHAM.—November 21st.—For the erection of sixteen houses, for the urban district council.—The Surveyor.

BARROW.—November 23rd.—For the erection of a public library, for the corporation.—Borough Engineer and Surveyor.

HENDON.—November 23rd.—For the erection of a bungalow, for the urban district council.—Mr. S. S. Grimley, engineer and surveyor.

LONDON.—November 24th.—For the erection of an annexe to engine-house at Abbey Mills pumping station, for the county council.—Chief Engineer, Spring-gardens, S.W.

SELBY.—November 24th.—For the construction of a subway road and retaining walls, for the urban district council.—Mr. Bruce McG. Gray, Council Offices, Selby.

CHESTER.—November 24th.—For the erection of a school, for the Administrative Committee.—Messrs. J. M. Davies & Sons, 14 Newgate-street, Chester.

MALDON.—November 24th.—For the construction of the Tollesbury waterworks, for the rural district council.—Mr. W. Almond, engineer and surveyor, 6 Market-hill, Maldon, Essex.

WEST SUSSEX.—November 24th.—For the erection of a school, for the Joint Education Committee.—Mr. H. P. Roberts, county education architect, Thurloe House, High-street, Worthing.

FINCHLEY.—November 25th.—For the erection of an overground convenience, for the urban district council.—Mr. C. J. Jenkin, surveyor.

BRISTOL.—November 26th.—For the reconstruction of the cattle market, for the Market Trustees.—Mr. P. Addis, The Exchange, Corn-street, Bristol.

HARROW.—November 28th.—For the erection of a ward block at the isolation hospital, for the urban district council.—Mr. J. Bennetts, surveyor.

HOLMFIRTH.—November 30th.—For the construction of a reservoir and laying cast-iron mains, for the urban district council.—Messrs. J. Barrowclough & Sons, engineers, Cross-roads, Holmfirth.

MANCHESTER.—December 2nd.—For the erection of a school, for the Education Committee.—Accountant, Education Offices, Deansgate.

MANCHESTER.—December 2nd.—For the construction of a retaining wall, for the gas department.—Mr. F. A. Price, superintendent, Town Hall.

BEDFORD.—December 4th.—For laying 2 miles of 4-in. and 3-in. cast-iron mains, with sluice valves and hydrants, for the rural district council.—Mr. Arthur J. Martin, 7 Victoria-street, Westminster, S.W.

BOMBAY.—January 7th.—For the complete manufacture, erection and equipment of a refuse destructor for the incineration of 200 tons of refuse per day, for the municipality.—Mr. P. R. Cadell, municipal commissioner, Municipal Offices, Bombay, India.

Iron and Steel.

DARTFORD.—November 16th.—For supplying and laying cast-iron pipes for the electricity works, for the urban district council.—Mr. W. Kay, clerk.

EDMONTON.—November 16th.—For the supply of cast-iron socketed and flanged pipes, and disc and sluice valves, for the urban district council.—Mr. C. Brown, engineer.

TORQUAY.—November 17th.—For laying 3,700 yds. and 6,150 yds. respectively of 15-in. and 14-in. cast-iron pipes, for the corporation.—Mr. Samuel C. Chapman, water engineer.

OSWESTRY.—November 23rd.—For providing and laying 4-in. and 3-in. cast-iron mains, sluice valves, fire hydrants, and air valves, for the rural district council.—Messrs. Berrington, Son & Watney, Prudential Chambers, Wolverhampton, and 28 Victoria-street, Westminster, S.W.

ISLE OF WIGHT.—November 25th.—For supplying and fixing a conical buoy and other works at the sewer outfall, for the rural district council.—Mr. H. Eldridge Stratton, clerk, 30 Pyle-street, Newport, I.W.

BIRKENHEAD.—December 7th.—For the construction of pipe line consisting of 11¾ miles of cast-iron and steel pipes, tunnel and tanks, for the corporation.—Sir Alexander Binnie, Son & Deacon, St. Stephen's House, Victoria-embankment, London, S.W.

BIRKENHEAD.—December 7th.—For the supply of sluice valves, automatic valves, boxes, and gratings, for the corporation.—Sir Alexander Binnie, Son & Deacon, St. Stephen's House, Victoria-embankment, London, S.W.

Roads.

HASTINGS.—November 14th.—For the supply of 1,000 yds. of unbroken blue stone, for the rural district council.—Mr. D. Paine, surveyor, Stonelynk Farm, Fairlight, Hastings.

WAKEFIELD.—November 16th.—For forming private streets, for the corporation.—Mr. J. P. Wakeford, city surveyor.

EAST SUSSEX.—November 16th. For the supply of materials, haulage, and team labour, for the county council. Mr F. J. Wood, county surveyor, County Hall, Lewes.

LUTON.—November 16th.—For the supply of broken slag, for the year ending November 30, 1915, for the corporation.—Borough Engineer.

NORTHUMBERLAND.—November 16th.—For supplying, breaking, and carting stone, and also for the supply of tar, pitch, and creosote oil, for the county council.—County Surveyor, Moot-hall, Newcastle-on-Tyne.

FARNHAM.—November 17th.—For the supply of granite, for the urban district council.—The Surveyor.

ALTON.—November 17th.—For the supply of granite, for the ensuing district council.—Mr. G. Bertram Hartfree, Town Hall, Alton, Hants.

WEST HARTLEPOOL.—November 18th.—For the supply of concrete kerbstone flags, scoriæ, whinstone channel blocks, paving setts, hand, machine, and unbroken whinstone, pitch, tar, and lime, for the corporation.—Mr. N. F. Dennis, borough engineer and surveyor.

SOUTHAMPTON.—November 18th.—For the hire of steam rollers during the year ending March 31, 1916, for the county council.—County Surveyor, The Castle, Winchester.

SOUTHAMPTON.—November 18th.—For the supply and delivery of tools for use on main roads, for the county council.—County Surveyor, The Castle, Winchester.

SOUTHAMPTON.—November 18th.—For the supply of stone for the repair of the main roads, for the county council.—County Surveyor, The Castle, Winchester.

LEWISHAM.—November 18th.—For supplying and laying wood paving, for the borough council.—Borough Surveyor, Town Hall, Catford.

WEST HARTLEPOOL.—November 18th.—For the supply of Yorkshire and concrete kerbstone, flags, scoriæ and whinstone channel blocks, paving setts, and other materials, for the corporation.—Mr. N. F. Dennis, borough engineer and surveyor.

WEST SUFFOLK.—November 23rd.—For the supply of tar for the surface treatment of roads, for the county council.—Mr. W. Lionel Jenkins, county surveyor, Bury St. Edmunds.

BEACONSFIELD.—November 23rd.—For the supply of 1,000 tons of 2½-in. granite, for the urban district council.—Mr. H. Sargeant, surveyor.

SOUTHGATE.—November 23rd.—For private street works, for the urban district council.—Mr. C. G. Lawson, surveyor.

SHOREHAM.—November 23rd.—For the supply of 600 tons of granite, quartzite, or Elvan stone, for the urban district council.—Mr. A. W. Nye, surveyor.

SELBY.—November 24th.—For the construction of a subway road and retaining walls, for the urban district council.—Mr. R. B. McG. Gray, surveyor.

WHITSTABLE.—November 24th.—For the supply of 1,000 cub. yds. of picked flints, and 200 cub. yds. of hoggin, for the urban district council.—Mr. F. Laurens, surveyor.

MIDDLESBROUGH.—November 25th.—For the repaving of back streets, for the corporation.—Mr. S. E. Burgess, borough engineer.

WARWICKSHIRE.—November 25th.—For the supply of road material, broken and unbroken, for the county council.—Mr. John Willmot, county surveyor, 6 Waterloo-street, Birmingham.

ELLESMERE PORT.—November 28th.—For making up certain streets, for the urban district council.—Council Offices.

BARTON-UPON-IRWELL.—December 5th.—For private street works, for the rural district council.—Mr. A. H. Mountain, Union Offices, Patricroft, near Manchester.

KENT.—December 5th.—For the supply of Guernsey, Jersey, or Alderney granites, Clee Hill basalt, Leicestershire granites, Penlee, St. Keverne, or other Cornish granites, Northumberland whinstone, Penmaenmawr or other Welsh granites, quartzite, Norway granite, Quenast or Lessines, 35,000 tons of tarred-macadam, 15,000 yds. of surface-picked or grubbed flints, and 5,000 yds. of Kent rag, for the Bridges and Roads Committee.—Mr. W. B. Prosser, clerk, Sessions House, Maidstone.

Sanitary.

KENDAL.—November 16th.—For the construction of stoneware pipe sewer and a concrete outfall channel, for the corporation.—Mr. F. W. Oxberry, borough engineer.

ORSETT.—November 18th.—For the construction of sewers, and providing engines, compressors, ejectors, and other works, for the rural district council.—Messrs. H. Walker & Son, Albion Chambers, Kingstreet, Nottingham.

PAIGNTON.—November 23rd.—For laying a sewer, for the urban district council.—Mr. C. O. Baines, engineer and surveyor.

PETERSFIELD.—November 25th.—For the construction of about 5 miles of pipe sewer with manholes, and sewage purification works, for the rural district council.—Messrs. Chambers, Smith & Adams, 53 Victoria-street, Westminster, S.W.

BARTON-UPON-IRWELL.—November 28th.—For the construction of new tanks, storm overflow, humus tanks, circular percolating filter, and other works, for the rural district council.—Mr. A. H. Mountain, surveyor, Union Offices, Green-lane, Patricroft, near Manchester.

BANBURY.—November 30th.—For the construction of sewage disposal works, for the corporation.—Messrs. Willcox & Raikes, Union Chambers, 63 Temple-row, Birmingham.

PONTEFRACT.—December 1st.—For scavenging work in certain parishes, for the rural district council.—Assistant Overseers.

BURTON-UPON-TRENT.—December 2nd.—For the reconstruction of about 470 yds. of 2 ft. 6 in. diameter brick and concrete sewer, for the corporation.—Mr. George T. Lynam, borough engineer and surveyor.

ALEXANDRIA.—December 8th.—For the construction of a sewerage system, for the municipality.—"M. le Président de la Commission Municipale d'Alexandrie," Alexandria.

Stores.

BRISTOL.—November 16th.—For the supply of stores, for the Sanitary and Improvement Committee.—City Engineer.

WEST HARTLEPOOL.—November 18th.—For the supply of road materials, sewer pipes, pitch, tar and lime, for the corporation.—Nelson F. Dennis, borough engineer and surveyor.

NOTTINGHAM.—December 3rd—For the supply of cement, blue lias lime, red bricks, blue bricks, timber, earthenware pipes, iron castings, gullies, Yorkshire flags, kerb, granite setts, broken granite, ironstone slag, chippings, river gravel, coal, picks, shovels, scoops, ironmongery, scavenging, and other brushes, disinfectants, refined tar, pitch, and creosote oil, for the corporation.—Mr. Arthur Brown, city engineer, Guildhall.

TENDERS FOR MUNICIPAL WORKS OR SUPPLIES.

The Editor invites the co-operation of SURVEYOR *readers with a view to making the information given under this head as complete and accurate as possible.*

* Accepted. † Recommended for acceptance
‡ Provisionally accepted

ANNFIELD PLAIN.—For private street works, for the urban district council.—Mr. T. J. Trowsdale, surveyor:—

Elliot & Lormick, Annfield Plain	£129
J. Douglass, Newcastle-on-Tyne	127
J. T. Castle, Annfield Plain	122
Johnson & Strong, Stanley S.O., Co. Durham	114
Arthur & McHugh, Tanlotin S.O., Co. Durham	113
K. S. Ledger, Annfield Plain	113
T. Gatiss, Annfield Plain	112
Lee & Dunn, Annfield Plain	99

HINCKLEY.—For laying about 4 miles of water mains, erection of a workshop, and approach road, and the provision and fixing of wrought-iron fencing, for the rural district council.—Mr. E. H. Crump, engineer:—

Stimpson & Rolleston, Leicester	£1,713
H. Morley & Sons, Keighley	1,563
A. Ward, Derby	1,454
A. Jeffcote, Hinckley	1,410
A. Hyslop, Manchester	1,396
A. Palmer, Glenfield	1,391
W. Press & Son, London	1,325
E. Tukes, Tipton	1,321
G. Trentham, Birmingham	1,304
C. Jackson, Tipton	1,290
R. Brebner & Co., Edinburgh	1,251
A. Sykes, Nottingham	1,202
W. S. Scott & Co., Luton	1,100
H. Puller & Co., Glasgow	1,035
T. Rearsley & Son, Leigh	1,000
Hanney Brothers, Swansea	966
— Brown, Nuneaton	929
G. Greaves, Hinckley	921

LEYTON. For the construction of a carriage concrete kerb, channel and paved invert channels in the several roads and the paving of the footways in Leyton-road, Harlesden:—

	£ s. d.
W. Brindle, Ealing	1,994
A. J. Sharp, Leyton	1,914
A. & S. Byrne, Hackney	1,842
Bevan & Co., Leytonstone	1,698
D. J. Jackson, Ealing	1,684
W. & C. Dorey, Basingstoke	1,611
Mayhew & Co., Leyton	1,610
F. J. Orchard, Leytonstone	1,540

NORTH DARLEY. Contract for the supply of 1,000 tons of granite for the urban district council.—Mr. L. F. Lowe, surveyor.

Ellis & Everard, Harrison Rise, Leicester, £—

ROMFORD. For the supply of 600 tons of granite, for the urban district council.—Mr. H. J. Baker, surveyor.

	Per ton at Romford G.E.Rly. Station.
	s. d.
[illegible] Limited, Westminster	15 11
[illegible], Greenwich, S.E.	15 10
J. Mowlem & Co., Westminster	15 9
A. & F. Marriott, Ltd., Richmond-road, E.C.	15 6
Enderby and Stone, Stanton Granite Company, Leicester	14 11
Gurney & Co., Leicester, for Guernsey granite	14 10
Croft Granite Company, near Leicester	12 11
Jees Hartshill Granite Company, Atherstone ..	12 2
C. Abell, Limited, Atherstone	12 2

WANDSWORTH. For making up certain streets for the borough council.—Mr. P. Dodd, borough engineer.

Part of Merton-lane, S. Lane, £441	
Part of Broadwater-road, S. Lane, £495	

WELSHAM. For the extension of the asylum, Goodmayes, Essex, for the corporation.—Mr. J. G. Morley, borough engineer.

	£61,566
McLaughlan & Harvey, Brecknock-road, N.W.	60,000
S. E. Moss, Southend	59,000
Thomas & Edge, Woolwich	58,891
W. S. Shapton, Bow	58,257
Davey & Armstaze, Southend	57,829
Pattinson & Sons, Limited, Ruskington	56,170
A. N. Coles, Paddington	55,815
J. W. Jerram, Plaistow	55,394
W. J. Maddison, Canning Town	55,375
A. E. Symes, Stratford	53,961
F. J. Coxhead, Leytonstone	53,949
H. C. Horswill, Forest Gate*	

MEETINGS.

Secretaries and others will oblige by sending early notice of dates of forthcoming meetings.

NOVEMBER.

19.—Concrete Institute: Prof. Henry Adams delivers his Presidential Address. 7.30 p.m.

20.—Institution of Mechanical Engineers: Mr. G. Gerald Stoney, F.R.S., on "The Effect of Vacuum on Steam Turbines." 8 p.m.

26.—Institution of Municipal and County Engineers: West Midland District Meeting at Birmingham.

28.—Institution of Municipal Engineers: Annual General Meeting in London.

TENDERS WANTED.

BEDFORD RURAL DISTRICT COUNCIL.

GOLDINGTON WATER SUPPLY.

EXTENSIONS.

The Bedford Rural District Council invite Tenders for the Laying of about 2 miles of 4-in. and 3-in. Cast-iron Mains, with all necessary Sluice Valves, Hydrants, &c. The whole to be in accordance with Plans and Specifications prepared by Mr. Arthur J. Martin, M.Inst.C.E., of 7 Victoria-street, Westminster, S.W., the Engineer appointed by the Council for the carrying out of the works.

The Drawings and Specifications, with Conditions, may be seen, and copies of Specifications and Bills of Quantities may be obtained, at the Office of the Rural District Council, No. 115 High-street, Bedford, or that of the Engineer (as above), upon payment of a deposit of One Guinea, which will be returned to *bonâ-fide* Tenderers on the letting of the Contract.

Sealed Tenders, endorsed "Goldington Water Supply," must be delivered to me at 115 High-street, Bedford, on or before 4th December, 1914.

The Council do not bind themselves to accept the lowest or any Tender.

WILLIAM PAYNE.
Clerk to the said Council.

115 High-street.
Bedford.
November 10, 1914. (2,083)

CITY OF NOTTINGHAM.

The Works and Ways Committee are prepared to receive Tenders for the Supply of the undermentioned Stores and Materials, the Contracts to commence on the 1st January next and to terminate on the 31st December, 1915:—

(A.) Cement.
(B.) Blue Lias Lime.
(C.) Red Bricks.
(D.) Blue bricks.
(E.) Timber.
(F.) Earthenware pipes, &c.
(G.) Earthenware pipes, &c. (Patent Joints).
(H.) Iron Castings, Iron Gulleys, &c.
(I.) Yorkshire Flags, Kerb, &c.
(J.) Granite Setts, Kerb, and Broken Granite.
(K.) Ironstone Slag, Chippings, &c.
(L.) River Gravel.
(M.) Coal.
(N.) Picks, Shovels, Scoops, &c.
(O.) Ironmongery.
(P.) Scavenging and other Brushes.
(Q.) Disinfectants.
(R.) Refined Tar.
(S.) Pitch.
(T.) Creosote Oil.

Forms of Tender may be obtained on applying to Mr. Arthur Brown, M.Inst.C.E., City Engineer, Guildhall, Nottingham, on payment of a deposit of 5s. each, which will be returned on receipt of a *bonâ-fide* Tender, in accordance with the Specification, providing such Tender is not withdrawn and is delivered by the time stated below.

Patterns and Samples may be inspected at the Eastcroft Depot, London-road, Nottingham.

The Committee will not consider any Tender except on the authorised Form of Tender, which must be delivered to the undersigned, in the official envelope provided, on or before Thursday, 3rd December, 1914.

The lowest or any Tender will not necessarily be accepted, and Tenders will only be accepted from persons who conform to the conditions as regards paying the local standard rate of wages, &c., and to the working rules of the Nottingham District applicable to the various trades.

(By order)
W. J. BOARD,
Town Clerk.

Guildhall, Nottingham.
November 11, 1914. (2,081)

GRANITE.

The Alton Urban District Council invite Tenders for the Supply of Granite.

Forms of Tender may be obtained from the undersigned.

Sealed Tender to reach Mr. W. Bradley Trimmer, Clerk to the Council, not later than the 17th inst.

G. BERTRAM HARTFREE, F.S.I.

Town Hall,
Alton,
Hants. (2,084)

(Continued on p. xviii.)

FOR SALE.

THORNEYCROFT 8-ton Steam Wagon and trailer for sale; boiler tested to 350 lb.; thoroughly overhauled and in first-class working order.—Abdon Clee Stone Quarry Company, Limited, Ditton Priors, Bridgnorth. (2,080)

APPOINTMENTS OPEN.

OFFICIAL AND SIMILAR ADVERTISEMENTS RECEIVED UP TO 4.30 P.M. ON THURSDAYS WILL BE INSERTED IN THE FOLLOWING DAY'S ISSUE, *but those responsible for their despatch are recommended to arrange that they shall reach* THE SURVEYOR *office by noon on* WEDNESDAYS *to ensure their inclusion in the weekly list of summaries. Such advertisements may, in cases of emergency only, be telephoned (City No. 1046) subject to later confirmation by letter.*

PRACTICAL ROAD SURVEYOR or Foreman Manager to take charge of outside work in connection with the Hipperholme Urban District Council.—Apply by letter, stating qualifications, wages, &c., to the Clerk to the Council, 4 Harrison-road, Halifax, on or before 23rd November, 1914. (2,066)

The Surveyor

And Municipal and County Engineer.

Vol. XLVI. NOVEMBER 20, 1914. No. 1,192.

Minutes of Proceedings.

Extraordinary Traffic: The Time Limit.

The question of the time within which proceedings for extraordinary traffic expenses must be commenced is not always an easy one to answer. Under the Locomotives Act, 1898, sec. 12, sub-sec. (1) (*b*), such proceedings must be begun within twelve months of the time at which the damage has been done, or where the damage is the consequence of "any particular building contract, or work extending over a long period" within six months after the completion of the contract or work. The intention of the latter part of the sub-section is not to cut down the right given by the former part, but to give a right to recover expenses in respect of damage which would otherwise have been barred by the earlier clause. This seems so obvious a proposition that it hardly needs the *imprimatur* of judicial authority. But if any are inclined to doubt it they may be referred to the *dicta* of Lord Justices Romer and Stirling in *Kent County Council* v. *Folkestone Corporation* (1905, 1 K.B., 620) in corroboration of this view of the effect of the statute. A more difficult point, raised in the same case, was whether, where a public authority have conducted extraordinary traffic, the sub-section excludes the operation of the Public Authorities Protection Act, 1893, which limits the time for proceedings for any act done in execution of any public duty or authority to six months after the act complained of. The decision was in the negative, with this qualification, however, that where the damage is caused by the acts not of the public authority's own servants but of an independent contractor, the operation of the Protection Act is excluded, whether the action is brought against the contractor or against the authority. But the chief controversy as to the interpretation of the sub-section of the Act of 1898 has gathered round the phrase—"any particular building contract or work extending over a long period." No definite rule can be laid down as to what contracts or works are within the clause—it is a question of fact in each case. One or two cases which have been decided may, however, serve as guides in the application of this provision. From these it appears that the haulage of timber purchased under a series of contracts from the owners of any estate is not a "work" within the meaning of the sub-section (*Norfolk County Council* v. *Green*, 68 J.P., 223). Neither is a contract for the delivery of stone in such quantities as the purchasers should from time to time direct during a certain year (*Bromley Rural District Council* v. *Croydon Corporation*, 1908, 1 K.B., 353).

In a rather more complicated case a county council contracted with a firm of builders to make alterations and additions to a building so as to convert it into an asylum, and afterwards contracted with another firm to erect a temporary asylum pending the completion of the alterations. Extraordinary traffic having occurred in the carrying out of the contracts the highway authority brought an action more than six months after the completion of the original contract, but within six months from the completion of the subsidiary contract. It was held that the claim for damage caused in carrying out the first contract was barred; in other words, the two contracts were not to be considered as together constituting one entire contract or work within the meaning of the clause (*Epsom Urban District Council* v. *London County Council* (1900, 2 K.B., 751). In another case a local authority were carrying out a road widening scheme, and employed a haulier to cart stone. Damage was done to certain roads in the course of the carrying out of the haulage contract, the work under which was completed six months before the widening of the road was finished. Proceedings were not commenced until after the expiration of the six months, and it was held that the claim was barred, except as to damage done within twelve months before the issue of the writ—that is to say, the whole works of road widening were not to be considered as constituting one "work" for the purpose of the time limit (*Kent County Council* v. *Folkestone Corporation*, *ubi supra*). But in the latter case a local authority contracted for the construction of a reservoir and the laying of two lines of pipes in connection with it. Damage to the highway was caused solely by the laying of one line of pipes, and proceedings were commenced more than a year after the laying of that line, but before the completion of the reservoir. And it was held that the whole of the operations constituted one "work," and consequently that the action was in time (*Carlisle Rural District Council* v. *Carlisle Corporation*, 1909, 1 K.B., 471). Another source of some controversy has been found in the apparently simple phrase, "the completion of the contract," but we must reserve comment upon this for a future occasion.

Public Health of Staffordshire.

The annual report of Dr. [illegible], the county medical officer of health for Staffordshire, is always an interesting document, and the account of the work of his department for the year 1913, which is now before us, forms no exception to the rule. We single out three matters for comment, not by way of criticism, but as examples of the sound work which is being accomplished for the improvement of the public health of the county. First, there is the [illegible] to secure the abolition of [illegible] closets. Several of the local authorities have done much good in this direction, but it appears that there is ample justification for special effort on the part of the county council to bring about this reform by utilising to the fullest extent the additional powers given them by the Housing and Town Planning Act. Local authorities can no longer justify inactivity on their part by professing that the law does not enable them adequately to enforce the substitution of water carriage for conservancy methods of excrement removal, for, by adopting certain clauses of the Public Health Acts Amendment Act, 1907, they can acquire the needful powers of compulsion. There can be no question that the continuance of conservancy methods tends to degrade the people and to discourage many from taking that interest in their homes without which all-round cleanliness can never be secured. This in itself would justify a radical change, but, when year by year the danger to health attending the system is more and more conclusively demonstrated, it is really incredible that so many local authorities should remain callous and require such constant spurring on to induce them to make what little progress there is being made. Without exception, the medical officers of health of the county have for a quarter of a century been pressing for reform in this matter, and year by year it is most depressing to gather from some of their reports that progress is so slow.

The next matter to which we desire to refer is the activity which is being displayed by many of the authorities of the county in the direction of improving housing conditions. The work of systematic inspection is, however, severely handicapped in certain districts owing to the inadequacy of the sanitary staff. For example, the medical officer of health for Biddulph reports that the development of that district has been so great that one man cannot cope with the work, especially when he has to act as surveyor as well as inspector of nuisances; and he goes on to recommend a separation of the two offices. We have consistently expressed the view that it is false economy to cut down the personnel of a public health department, and we need hardly say that we fully endorse the character of the change suggested for Biddulph. Lastly, there is the question of the reform of the by-laws in districts in which those in force are out of date. Dr. Reid points out that it is most desirable that by-laws in accordance with modern ideas should be in force in every district. Generally, the report is a record of steady work carried out on sound lines.

* * *

Housing at Greenock.

The report of the commissioners appointed by the Scottish Local Government Board to inquire into alleged unsatisfactory housing conditions in Greenock is of more than local interest, inasmuch as it affords some indication as to the official view of the functions of a local authority as purveyor of housing accommodation in the absence of private enterprise. The inquiry had its origin in a complaint by certain householders to the effect that there was a deficiency of housing accommodation, that many existing houses were insanitary, and that the corporation had not adequately carried out their duties under either part of the Housing, Town Planning, &c., Act, 1909. The commissioners were of opinion that the existence of a great number of insanitary properties was proved conclusively, and for this the report blames the owners, who do not sufficiently realise their responsibility in owning and letting uninhabitable dwellings. In dealing with the duty of the corporation on the failure of private enterprise, the report points out that the prevailing circumstances are peculiar, inasmuch as during the past three or four years there has been a boom in general trade in the borough, coupled with the influx of many workmen to the torpedo factory. To meet this influx employers of labour have done practically nothing, and even the Admiralty have not undertaken any scheme for housing their own employees.

It is a generally accepted fact that the provision of the better-class houses can be made upon an economic basis with reasonable certainty, and the commissioners do not think it is a good policy for the corporation to acquire the habit of providing, and to be expected to provide, for the very poorest class at uneconomic rents. That course would leave the better-class tenants for the benefit of private enterprise, and it would have the effect of subsidising wages or creating charity rents. There is a reasonable likelihood of a permanence of the improved trade conditions of the burgh, and the commissioners are of opinion that it will be a prudent thing for the corporation to proceed at once with the erection of 250 houses in addition to the 41 which are practically completed. It is not thought that these houses will entirely solve the problem; but the corporation should be permitted a certain time in which to stimulate private enterprise by the preparation of a town planning scheme which would prescribe such provisions as had been outlined and would appear acceptable to all parties concerned. If, after all these facilities have been provided, private enterprise is not attracted at an early date, the corporation should be required to undertake the erection of 250 additional houses. The corporation have indicated their desire to meet the situation, and the commissioners state that they have confidence that that they will do so.

* * *

Electricity Supply Problems.

The new president of the Institution of Electrical Engineers, Sir John Snell, has had such a wide and varied experience of his profession that an inaugural address of special interest was anticipated. This expectation was amply fulfilled in an utterance which dealt with the relation of the institution to technical education and to the commercial side of the industry, and discussed at some length important questions regarding bulk supply and the requirements of the domestic consumer. In recent years it has been recognised more and more in various fields of municipal enterprise that substantial economies may be effected by co-operation between neighbouring authorities, and Sir John Snell pointed out that the supply of electricity forms no exception to the rule. Indeed, he definitely laid down as a general proposition that a new local area about to instal an electrical system would do well first to obtain terms from a bulk supply authority. Better still, in many cases, while the local authority may find the capital to build its local sub-stations and to lay its distributing network at cheaper rates of interest than a bulk authority can raise money, expenses can be reduced to a minimum by arranging for all the administrative work and upkeep of the local system to be undertaken under proper supervision by the bulk authority. The Local Government Board can do much in this direction, but each case must

be considered on its merits. The main object is to enable the public systems to supply consumers on the most favourable terms. A further interesting suggestion made in the course of the address was that the Local Government Board should undertake a complete survey of the present position of all electrical undertakings, so that they may be in possession of the necessary information to enable them to deal properly with applications for loans in cases where it appears that amalgamation of electrical interests or purchase of energy from some outside source for local distribution ought to be adopted. References to modern developments in current generation and to the rival claims of the overhead high-pressure system and the third rail in railway electrification completed an address of more than usual interest.

* * *

The Engineer and Malaria. Mr. F. D. Evans, Assoc.M.Inst.C.E., executive engineer, Public Works Department, Federated Malay States, discoursed on this topic at a recent meeting of the Junior Institution of Engineers. As is well known, the definite association of the mosquito with malaria was discovered by Sir Ronald Ross (then of the Indian Medical Service—in 1897, and has been conclusively proved by many workers since that date. All attempts to transmit malaria in any other natural way have failed, and the radical measure to prevent malaria is obviously mosquito destruction. The mosquito is a water-breeding insect, and Mr. Evans explained that anopheles mosquitoes generally breed in shallow pools and swamps, but that other species which have been shown to transmit other diseases, such as yellow fever, commonly breed in stagnant water, especially in the collections of water in tins, refuse and water holding receptacles, always to be found near habitations. The most certain way of getting rid of mosquitoes is to do away with all water containing refuse in vessels, or properly to screen in or close in such vessels, and thoroughly drain the land. As an alternative to thorough drainage the oiling of pools by covering with a thin film, and the poisoning of pools with a lardacide have been extensively tried, but these methods require extraordinary care and frequent application to be successful. In the Federated Malay States drainage has proved the most economical, suitable and permanent anti-malarial measure. There is not much doubt that in many countries, as pointed out by Mr. Evans, an essential to the success of an anti-malarial campaign is that the operations should be under the control of a single central authority. Under any circumstances, it will be agreed that it is most necessary for engineers carefully to consider the probable effects of malaria on the labour force to be employed on any new work in a malarious country, and to adopt what precautionary measures are practicable, in order to guard against the possibility of being faced with an appalling death and wastage rate when the work is in progress.

* * *

North-West Durham's Water Supply. The Durham County Council are to be congratulated upon the measures they propose to adopt with respect to the water supply of the north-west part of the county. This area is supplied by the Weardale and Consett Water Company, under, presumably, the customary statutory powers; but it would appear that the company are in the habit of fulfilling their duty in a manner which, however satisfactory it may appear to them, is highly unsatisfactory to the inhabitants. Things are, in fact, if we are to credit a report on the subject by the Health Committee of the Durham County Council, in "a very serious" state. The chairman of the council, Sir Frank Brown, did not hesitate to describe them as a scandal, while Councillor Lawson made allusion to "the serious results of recent experiences arising from the company's failure to give a sufficient supply of water," the inference to be drawn from which is fairly obvious. In a resolution which he moved Councillor Lawson affirmed that the time had arrived when the local authorities, under a Joint Water Board, should own and control the water supply, and requested the Local Government Board to co-operate with the local authorities in obtaining the necessary powers for that purpose. The meeting was quite prepared to pass this proposition, but it was considered desirable to refer the subject to the Health Committee, who have decided to ask the Local Government Board to hold an inquiry "with a view to expediting any steps which ought to be taken for the provision of an adequate supply for the area in question." It is evident from what was stated that the water company have hitherto been treated with undue leniency, considering how greatly they have been in default, and it is to be trusted that the Local Government Board will act with promptitude in helping the Durham County Council to find the only possible remedy—viz., the control of the water supply of the area by a local authority.

The Cole Testimonial. Having regard to the long and devoted services rendered to the Institution of Municipal and County Engineers by Mr. Thomas Cole as secretary to that body, it was only natural that the council should have decided to mark his retirement from office by some tangible recognition of the esteem and regard in which he is held. In announcing their decision some time ago we expressed the opinion that they were acting in accordance with the general wish in fixing the limits of subscriptions to the testimonial fund at such a sum as to make it possible for every member to take part. The response has been good, but there are still many members who have not contributed, and as it is proposed to close the fund in time to publish the list of subscribers next month, it is necessary that those who desire to subscribe and have not yet done so should act quickly. The president has issued a circular letter pointing this out, and we agree with him in the view that it only needs such a reminder to bring in the remainder of the contributions before the appeal closes. From our knowledge of Mr. Cole we have full confidence in saying that the measure of his appreciation will not be the intrinsic value of the gift, but the knowledge that it comes as a spontaneous expression of the appreciation of the general body of the members of the great work which he has done for the institution which he loved and served so well.

2nd London Sanitary Company. We learn from Captain Arthur J. Martin that authority has now been given for the formation of a second Home Service Sanitary Company of the 2nd London Division Territorial Force. Thanks to the splendid response to Captain Martin's appeal for recruits for the 2nd (Res.) London Sanitary Company, he has not only filled the ranks of that company, but has on his waiting list the names of nearly enough well qualified men to fill up the new company. Applicants for the few remaining vacancies, who should be between the ages of seventeen and thirty-five, and should possess good sanitary experience, should communicate at once with Captain Cave, O.C. Depot, 2nd London Sanitary Company, Duke of York's Headquarters, Chelsea, S.W. The new company is being formed primarily for home service, but men will be transferred to the Imperial Service unit as opportunities arise.

The Complete Bacterial Treatment of Sewage without Filters.

By W. NAYLOR, [illegible].

A paper [illegible] experiments [illegible] Author of Sewage Outlets" [illegible] read before a meeting of the Manchester Section of the Society of Chemical Industry on April last by Messrs. [illegible] Ardern, M.Sc., and W. T. Lockett, M.Sc.

The [illegible] in the Scientific Section. It has now been issued in pamphlet form. The organic matter in sewage is dealt with from the standpoint of the depth of superficial filtration and the final conclusion of [illegible] from the experiments and the deductions [illegible] made.

Naturally the authors commend it [illegible] as in a technical sense, according to their definitions, "complete" [illegible] the experiments dealt with conditions specially active bacterially.

Following a brief summary of the work of earlier investigators in the subject, the authors give in detail the particulars of their experiments which deal with the treatment of raw sewage by means of activated sludge, a treatment which [illegible] in its early stages, of considerable interest to municipal engineers, and to all engineers engaged in the design and construction of sewage works; for not only is the [illegible] of bacterial filters from sewage works in the future adumbrated, but also the introduction of [illegible] tank apparatus and plant in the way of aeration [illegible] and sludge-handling appliances.

For the purpose of obtaining this activated sludge [illegible] of the sewage were poured in bottles [illegible] capacity of 2 quarts, aeration being effected in the [illegible] by means of a laboratory blast pump. In the first [illegible] aeration was continued for a period of five hours, and at the expiration of that time complete oxidation and nitrification had been obtained.

The clear supernatant liquid having been withdrawn, the [illegible] activated sludge was introduced [illegible] fresh sample of sewage and the operation repeated several times, the amount of such sludge gradually increasing and the time required for complete nitrification gradually decreasing, so long as the sewage was maintained slightly alkaline, the [illegible] being a necessary condition.

When a sufficient quantity of sludge had been collected for the purposes of experiment, aeration of Manchester sewage in contact with it under varying [illegible] was observed, and one of the first points submitted to examination was whether it was desirable or necessary that the activated sludge be merely in contact with the sewage without intimate mixture of sewage and sludge, or whether there should be [illegible] mixture.

From an engineering point of view this is of great importance, for, while it is often a very small matter in a laboratory to arrange or fit up a very effective mixing or stirring apparatus for dealing with a pint or so of liquid and sludge, to bring about the same result on a large scale when dealing with hundreds of tons or millions of gallons involves extra tanks, pumps, engines and special machinery.

Two experiments were made with respect to mere contact *v.* intimate mixture (1 volume of activated sludge to 25 volumes of sewage), the samples of clear sewage being numbered, the one 7a, and the other 8a. A portion of each, denoted A, was used for contact without intimate mixture, and a portion B for intimate mixture, and the character of each portion is shown by the following figures:—

	7a		8a	
	A	B	A	B
Oxygen absorbed 4 hours ...	3·88	4·09	5·20	5·31
Free ammonia ...	2·71	2·71	2·43	2·56
Albuminoid ammonia ...	·32	·23	·17	·185
Nitrates and nitrites as ammonia ...	—	—	·07	·07

Presumably, these samples 7a and 8a were merely variant samples of the outfall discharge, and as the effect of the treatment upon them was pretty much the same in both cases relatively, the actual figures for one only—8a—need be adduced and considered in detail. In this case the oxygen absorbed was reduced in both cases, A and B, to 2·90 after four hours' aëration. It was then continued until twenty-four hours had been reached, when the [illegible] figure in A was [illegible] and for B 1·48, [illegible] results of considerable [illegible].

The free ammonia [illegible] practically in both A and B after [illegible] aeration, but after twenty-four hours it was 2·28 in A and 1·22 in B.

Albuminoid ammonia was reduced in both A and B by practically the same amount during the first four hours—viz., to ·30 in A and ·29 in B; but after twenty-four hours the figure for the former was ·215 and for the latter ·10, an exceedingly striking result.

The increase in nitrates followed on the same lines as the reductions in objectionable high figures, being 17 for both after four hours, while after twenty-four hours it was ·86 in B, but only ·07 in A.

It will be seen, therefore, that satisfactory effluents were obtained (and for the present purpose we may accept as satisfactory an effluent yielding albuminoid ammonia below ·15 per 100,000, absorbing oxygen in four hours below 1·5 per 100,000, and showing unmistakable signs of nitrification in progress) where there was intimate mixture of sewage and sludge combined with aëration during a period of twenty-four hours. This period of twenty-four hours, however, was presumably regarded by the authors as outside the region of practical working, for the next series of experiments were conducted over a shortened period of time, but with a much greater quantity of sludge proportionately.

These dealt with varying proportions of activated sludge to sewage, and compared also the effect of "side by side" aëration in parallel samples of sewage in the *absence* of activated sludge. In the latter cases the samples of sewage were diluted with water to the extent of about 20 per cent, that being about the equivalent dilution due to the water introduced by the activated sludge in the cases where it was used.

Analytical figures are given in full detail, but the effect of the treatment can be well observed by following the condensed table which quotes only those for oxygen absorbed, albuminoid ammonia, and nitrates. By reading the table downwards vertically the effect of aëration may be readily observed, the outstanding feature being that with a volume of sludge to sewage as 1 to 4, and six hours' aëration, a fairly good effluent is obtained.

It will probably have been observed already that in all the results given on opposite page the oxygen absorbed figure is reduced during the process of aëration much more quickly than the figure for albuminoid ammonia, that is to say, the oxidation of the carbonaceous, putrescible matter (in the presence of suitable organisms) proceeds much more quickly than the nitrification of ammonium compounds during the period of aëration.

Since these two processes are the separate work of distinctive organisms, it probably occurred to the authors that a separation of both organisms and processes might be attempted, for the next portion of the paper concerns itself with the fact that in the process there is a rapid initial effect on the oxidisable matter, a well clarified effluent being obtained within a period of about three hours (even where the proportion of activated sludge is low), the latter stages being confined to the nitrification of ammonium compounds as would be expected from published results of workers in the past.

Attempts were made to sectionise or separate the process into two parts—(*a*) a carbonaceous formation, (*b*) a nitrification of ammonium compounds.

With this object in view, parallel samples of raw sewage were treated with only partially activated sludge first, for a period of two hours, and afterwards for a further period of two hours with ordinary activated sludge, and the effects compared with the same raw sewage which had been treated for four hours with thoroughly activated sludge which had been proved capable of thoroughly promoting nitrification.

This method of operation was repeated as often as was reasonably practicable within the twenty-four hours, with the result that the partially activated sludge and nitrifying sludge (in two operations) dealt

ing the *effects* only, for in none of the cases is the oxygen absorbed figure brought below 2·00, while the

On this point, however, it is reported: "Unfortunately, during the course of this series of experiments low temperatures were experienced, not only with the sewage dealt with, but in the laboratory, owing to trouble with the heating apparatus. . . . It was impossible to say to what extent, if any, either of these two factors influenced the results obtained, and instead of continuing sectionised experiments on these lines attention was diverted to the study of the question involved. Before leaving this part of the subject it may be stated that while the above experiment failed to determine the possibilities of sectionising the oxidation process the matter has not been lost sight of, and it is the intention of the authors to return to this question at an early date."

On the whole, the experiments must be regarded as

may be advanced that they are only "bottle" experiments, it must also be remembered that the day has gone when engineers ignore a laboratory experiment at sight, simply because it *is* a laboratory experiment. Cheaper materials, easier methods of handling, mixing, and lifting, quicker and more effectual methods of separation, filtration, conveyance, heating, cooling, and so forth, have rendered it customary now for engineers to look more closely at the actual facts demonstrated by the experiment rather than anything else.

it up in shallow lagoons over large areas for considerable periods of time. It was observed, however, even then, by the expert witnesses that the sewage which had been ponded up for some considerable time in very shallow lagoons attained a remarkable degree of purity, a high content of nitric nitrogen, and that the ponds also developed a fine growth of algæ.

On a smaller scale similar conditions have prevailed from time to time on the sewage farms of the Wigan and Bolton Corporations during the past twenty years, to say nothing of the work in earlier papers on "The Self-purification of Rivers" by Tidy.

The objects of the present experiments are obviously to discover whether the above slow operations can be artificially accelerated and conducted by such means and by such plant as will compete favourably with bacterial filters. Before this is settled much water will have to pass under the bridges, and either to speculate on revolutions or to parade imaginary difficulties would be alike improper.

At the same time, certain prominent facts thrust themselves upon one's notice. One volume of sludge to 4 volumes of sewage, or 1 volume in 5, is a pretty solid affair to have to deal with, since the sludge from precipitation methods is only produced at the rate

Results expressed in parts per 100,000

		Oxygen absorbed in 4 hours	Albuminoid Ammonia	Nitrogen as Nitrates

The satisfactory settlement of such a tremendous increase in sludge will necessitate increases in tank [illegible] though probably not by any means in proportion to the difference in the ratios of sewage and sludge. The time occupied in filling and drawing off would also be such a serious matter that continuous flow will be probably aimed at. Here again, however, settlement cannot be expected while aëration and intimate contact are being actively prosecuted; hence additional tank space for settlement on the continuous-flow system would be demanded, due to the increase in the burden of suspended sludge.

Temperatures are also evidently matters of importance. It is reported that the purification effected is seriously diminished at temperatures constantly below 10 deg. Cent. Up to 20 deg.—24 deg. Cent. no material difference in the clarification effect and general purification has been observed, although the nitrification change proceeds more rapidly as the temperature rises. At higher temperatures the clarification effect is somewhat interfered with during the earlier period of aëration with a consequent delay in the establishment of nitrification. Subsequently, the rate of nitrification somewhat increases.

The maintenance of the activity of the sludge is also a matter to which Messrs. Ardern and Lockett gave due attention.

Naturally, the question would arise as to the possi-

[illegible] tons per 1,000,000 gallons, or a [illegible] in 110, and for the settlement of the latter satisfactorily a six hours' period of quiescence is necessary, where continuous flow is not in vogue.

In making the necessary qualifying inspections as a witness in the action the position was found to be roughly as follows:—

The farm had an area of about 600 acres, and was called upon to deal with about 3,000,000 gallons of sewage per diem—a sewage not by any means fresh. As in most cases of old towns, some of the sewers were of good age, and, moreover, the temperature [illegible] tenant, and the method of treatment practically broad irrigation, for any attempts at preliminary settlement or precipitation were at that time crude.

Naturally, the tenant paid his rent with a view [illegible]

section 1 of the process (oxidation apart from nitrification) maintaining its activity under these conditions, and the experiments made in this connection deserve careful notice.

Four equal volumes of proved activated sludge were placed in separate bottles, A, B, C, D, each containing the sample, it may be safely assumed, though this is not specifically stated.

Taking D first, this was submitted to a process [illegible] settlement, and subsequent removal of purified [illegible] three times during the twenty-four hours. The results gradually deteriorated with the total inhibition of nitrification, but the behaviour of C suggests that such deterioration would not occur if the saline and free ammonia present in the remnant sludge after the draining off of supernatant liquor were previously oxidised to nitrates by the aëration of residual sludge only.

[illegible] purified effluent removed. Sludge was then aërated for remainder of day. In this case good results were maintained—where efficient aëration was insured.

The [illegible] in A and B were adopted for much longer periods, but evidently only with a view to comparisons beside D and C, the results being interesting in themselves though not requiring further notice here.

But the necessity for the further aëration of sludge alone again introduces "time and money," and renders it pretty plain that bacterial filters are not to [illegible] It must not be forgotten, however, that bacterial filters are not by any means self-maintaining. Cases of silting up, and even of frequent washing, are met with—matters of no small expense.

With aëration tanks, followed by any necessary final settlement arrangements, the ever-appearing difficulty as to fall of land for hydrostatic head on filters would be eliminated, as well as the trouble frequently arising from "revolving" sprinklers which refuse to revolve.

The question of aëration is comparatively simple, no great air pressure being required; indeed, the system of aërating liquids as a means of bringing about intimate admixture with sludge was introduced by Messrs. Mather & Platt over twenty years ago, both in processes of water softening and the treatment of trades waste. But in the case of sewages the "making up" of aëration pipes by silt and road detritus would have to be guarded against, and no less a question is that of the "exit air" after its passage through sewage, charged, as it may be at times, with offensive gases.

Should this air have to be passed through some sort of incinerating plant, the cost is further increased. That in the neighbourhood of percolating beds is frequently anything but pleasant, due merely to emanations only from the sewage, not to its having been forced through the sewage.

So far as the "sludge disposal" question is concerned, if anything, the process should bring about an improvement from two points of view. This material should be less disagreeable to handle, owing to its non-putrescent character, and for the same reason it should be less slimy, and therefore more easily pressed.

The results of the further experiments will be awaited with interest by all engineers, but tank experiments on a practical scale are necessary at this stage, particularly with reference to the "sectionising" portion of the process—apparently its most promising feature. Satisfactory work in this direction might easily result in the design of percolating filters used in pairs and working at different rates, the quicker rate and smaller area for carbonaceous oxidisation only, the slower rate and larger area for nitrification only.

Bayard Cars. We [illegible] Bayard Cars Limited, 155-157 Great Portland-street, London, W., copies of a number of unsolicited testimonials sent during the present year by owners of Bayard cars. All serve to show how much the purchaser of a car appreciates a vehicle that gives him good service.

THE REMOVAL OF CARBONIC ACID GAS AND IRON FROM WATER SUPPLIES.

At a local [illegible] Board meeting recently held by Mr. A. W. Brightmore [illegible] Government inspector, to inquire into an application [illegible] of the Corporation of Surbiton [illegible] purposes of their supply, at [illegible] of the difficulties experienced in connection with the [illegible] and the [illegible] were given on behalf of the applicants by Mr. A. E. Adams, the borough surveyor.

Mr. Adams stated that the town was supplied with water from a natural artesian well, and that there had been a long-standing complaint as to the [illegible] and smell of the water, due to the presence of dissolved iron and carbonic acid in the water. The amount (2·1 grains per gallon) of carbonic acid gas found in the well water was four times greater than [illegible] and the amount of iron present was 0·2 grains per gallon. As it had become apparent that steps must be taken to remove the iron and carbonic acid if the water was to be made palatable for the consumers, it was decided to instal a Candy automatic compressed air and oxidising filter on the low-level service in conjunction with a de-carbonator at the reservoir. The result of the treatment was that the iron in the water was reduced to a mere trace, and the carbonic acid to 0·61 grains per gallon, which is about that of a normal water. Carbonic acid gas when combined with oxygen had a very solvent action on wrought-iron pipes, and the excess of carbonic acid had for this reason previously caused the town much trouble. The Candy oxidising filter proved so exceedingly successful in improving the water on the low-level service that the corporation installed another Candy filter on the high-level service, with equally satisfactory results, the borough analyst reporting as follows: "The water after filtration and aëration is bright and clear, well aërated and practically free from iron, and the carbonic acid has been reduced to that of a normal tap water."

The inspector, among other questions, asked as to the amount of pressure necessary to force the water through the filters, to which the surveyor replied that he was pleased to find it so small; at the end of a week's working (which was as often as it was found necessary to clean the filters) the pressure on the inlet was only about 3 lb. more than on the outlet.

The inspector remarked that the fact of the Candy filters having been tried and proved so satisfactory was the best recommendation.

The surveyor explained that he was particularly desirous, before recommending a permanent scheme to his council, to test these filters under the arrangements made whereby, if the results had been unsatisfactory to them, the council would only have had to pay for the hire, and could return the filters to the makers.

The inspector: I do not know whether the medical officer of health wishes to make any remarks?

Dr. Briscoe: I think the installation of these Candy filters will be a great advantage to the town, and will contribute very much to the general use of the water, especially in the rural districts which will soon be brought into the borough.

The inspector: You are satisfied with the results obtained?

Dr. Briscoe: I am.

The inquiry then closed, and the inspector proceeded to view the waterworks.

Kingston Bridge Improvement. Kingston Bridge, which connects the Surrey shore of the Thames with that of Middlesex, has been widened by 30 ft., the extension being now open to the public. The original bridge had a width of 25 ft. only. Now there is a carriageway 35 ft. wide, and a footway 10 ft. wide on either side.

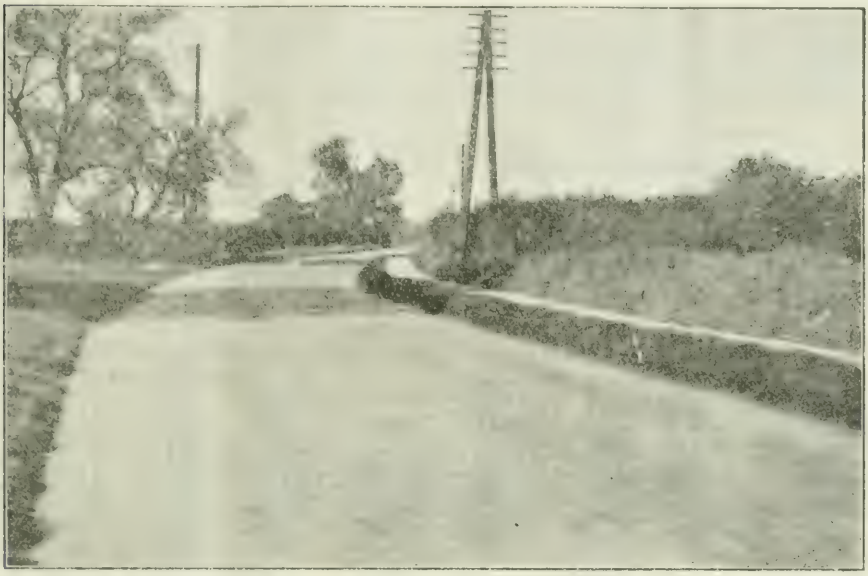
Challenge to a Road Surveyor.—At a meeting of the Carmarthenshire Main Roads and Bridges Committee recently some amusement was caused by the statement of Mr. Peel, a member, that a gentleman had come to the meeting to challenge Mr. Gomer Henry, the surveyor, to drive a horse and trap over the Llandilo—Llandovery road without tumbling, and had offered to give £5 to the Prince of Wales' Fund if the surveyor succeeded. The two surveyors were instructed to submit a report as to the slippery state of the roads in the county.

SLAG TAR-MACADAM ROADS.

By JOHN ROBINSON,
Surveyor to the Darlington Rural District Council.

During the past seven years I have laid many miles of slag tar-macadam roads for the Darlington

the result being that, although the road appeared to be rather open for the first few months after being laid, it eventually faced up to have the appearance of a mosaic pavement. I found, however, that I could get equally as good results and a road more suitable for the traffic of a rural district by putting down the road with material consisting of 70 per



LENGTH OF TAR-MACADAM LAID IN 1910 ON THE MAIN ROAD BETWEEN CROFT AND DARLINGTON.

Rural District Council. My first specification for carrying out this class of work was to use 2½-in. cubes of slag, and to apply a tar-spray at the rate of 1 gallon per square yard, and then to cover with ¾-in. chippings, and roll in the usual manner. This method, however, was not satisfactory, as the tar-spray would not penetrate the slag cubes sufficiently to bind them together, and the result was that the road was very loose and dusty. I then tried a method of laying the slag cubes on a bed of tarred slag, and then applying a tar-spray and ¾-in. chippings, but this was not satisfactory, as the tar-spray would not penetrate the bottom course, and I had to finish the coating with a very thin sprinkling of clean ¼-in. untarred slag. I then tried a method of laying the slag cubes on a bed of tarred slag, and then applying a tar-spray and ¾-in. chippings, but this was not satisfactory, as the tar-spray would not penetrate the bottom course, and I had to finish the coating with a very thin sprinkling of clean ¼-in. untarred slag. I then tried a method of laying the slag cubes on a bed of tarred slag, and then applying a tar-spray and ¾-in. chippings, but this was not satisfactory, as the tar-spray would not penetrate the bottom course, and I had to finish the coating with a very thin sprinkling of clean ¼-in. untarred slag.

LENGTH OF TAR-MACADAM LAID THROUGH AYCLIFFE VILLAGE ON THE DARLINGTON TO NEWCASTLE MAIN ROAD, IN 1910.

cent of 2½-in. and 30 per cent of 1½-in. mixed together and laid in one coat. In my opinion a great mistake made by road surveyors in laying a tarred slag road is the use of a fine tarred topping material. Almost

confidence in his material when applying it, and I have found from experience that roads laid in accordance with my specification [illegible] more evenly than those finished with any fine tarred topping.

[illegible] Darlington and north of Darlington through Aycliffe [illegible] laid for a period of six years) they would be able to satisfy themselves as to my contention.

WAKEFIELD WORKMEN'S DWELLINGS.

GENERAL SUMMARY OF SCHEMES.

[illegible] men's dwellings at Belle Vue and Alverthorpe, Wakefield—which have received the approval of the Local Government Board—has been prepared by the city surveyor, Mr. J. P. Wakefield, M.INST.C.E.

Each house, both at Belle Vue and Alverthorpe, is self-contained, having a separate water-closet, coalplace, copper and garden (front and rear) divided off by footpaths and fences.

The Belle Vue houses, including garden (front and rear), occupy an average area of 136 sq. yds. per house (exclusive of street areas), and average 14·17 houses to the acre (inclusive of allotment and street areas). A large playground for children and nineteen allotments are provided at Belle Vue, and the cost of these is divided proportionately, and included in the estimated total cost per house given above; but it is anticipated that each allotment will let at 10s. per annum.

The Alverthorpe houses average 17·34 houses per acre (inclusive of street areas). No children's playground has been provided, since there is a public pleasure ground already in the vicinity; but each house has a garden (both front and rear), and the average area occupied by each house (including gardens) is about 165 sq. yds.

A Municipal Picture-house.—Kirkintilloch has added to its municipal undertakings a picture show. The profits go to the common good of the burgh.

Municipal Engineering Students' Visit.—On Tuesday last Prof. Matthews, of University College, London, following up his recent public lecture on "Refuse Disposal," took his municipal engineering students to the Wood Green refuse destructor and public baths, which they were enabled to inspect by the courtesy of the council's engineer, Mr. C. H. Croxford. Mr. Croxford, who was accompanied by his assistant and the works manager, spared no pains in supplying information to the party, who on departing expressed [illegible]

PRO PATRIA.

[ELEVENTH LIST.]

We present herewith the eleventh list of municipal engineers and sanitary officials who are taking part in the war, and shall be glad to hear of other cases within the knowledge of our readers.

Adams, W., sewage works employee, Corporation of Leeds, private, West Yorks.

Ainley, E. E., inspector of works, sewerage engineer's department, Corporation of Leeds, 2nd Lieutenant, 6th West Yorks.

Atkinson, S., draughtsman, sewerage engineer's department, Corporation of Leeds, private, 9th West Yorks.

Beach, A., junior in resident engineer's office, sewerage engineer's department, Corporation of Leeds, bugler, 9th West Yorks.

Beecroft, C., office chairman, sewerage engineer's department, Corporation of Leeds, bugler sergeant, 8th West Yorks.

Bradley, H., Chairman in resident engineer's office, sewerage engineer's department, Corporation of Leeds, driver (Reservist), Royal Field Artillery.

Green, A. E., inspector of works, sewerage engineer's department, Corporation of Leeds, 2nd Lieutenant, 6th West Yorks.

Hainsworth, F. J., clerk, sewerage engineer's department, Corporation of Leeds, private, 7th West Yorks.

Lucas, J. O., improver, sewerage engineer's department, Corporation of Leeds, private, Royal Garrison Artillery.

Marriott, J. H., engineering assistant, sewerage engineer's department, Corporation of Leeds, private, Royal Army Medical Corps.

Moir, L. R., engineering assistant, sewerage engineer's department, Corporation of Leeds, private, Royal Army Medical Corps.

Silcock, E. H., inspector of works, sewerage engineer's department, Corporation of Leeds, 2nd Lieutenant, 6th West Yorks.

Spedding, A. E., correspondence and shorthand clerk, sewerage engineer's department, Corporation of Leeds, private, Royal Army Medical Corps.

Waller, A. J., loco. driver at sewage works, Corporation of Leeds, bombardier (Reservist), Royal Field Artillery.

Ward, J. L., sewage works employee, Corporation of Leeds, private, York and Lancaster.

Wilson, A. W., inspector of works, sewerage engineer's department, Corporation of Leeds, 2nd Lieutenant, 6th West Yorks.

The council of the Surveyors' Institution are desirous of preparing a Roll of Honour, comprising the names of all members who are engaged in military service, either in the Regular or Territorial Army. In order to enable this record to be correctly drawn up, members are desired to forward the requisite information to the Secretary, 12 Great George-street, Westminster, S.W.

Camp Sanitation.

5.—WATER.

By G. BERTRAM HARTFREE, [illegible], Engineer and Surveyor to the Alton, Hants, Urban District Council.

An allowance of 20 gallons per day per man and horse is adopted as the standard for barracks. In temporary camps the following is taken as a guide per diem: Men.—Drinking, ½ gallon; cooking, 1 gallon; washing, 3 gallons; horses—drinking, 5 gallons; washing, 2 gallons.

For troops on the march it is essential that the water engineer shall supply water with the least avoidable delay. In the absence of previous arrangements with the military authorities, it is suggested that an assistant engineer or some other competent person should be stationed at the watering post nearest the oncoming troops to give full but concise directions.

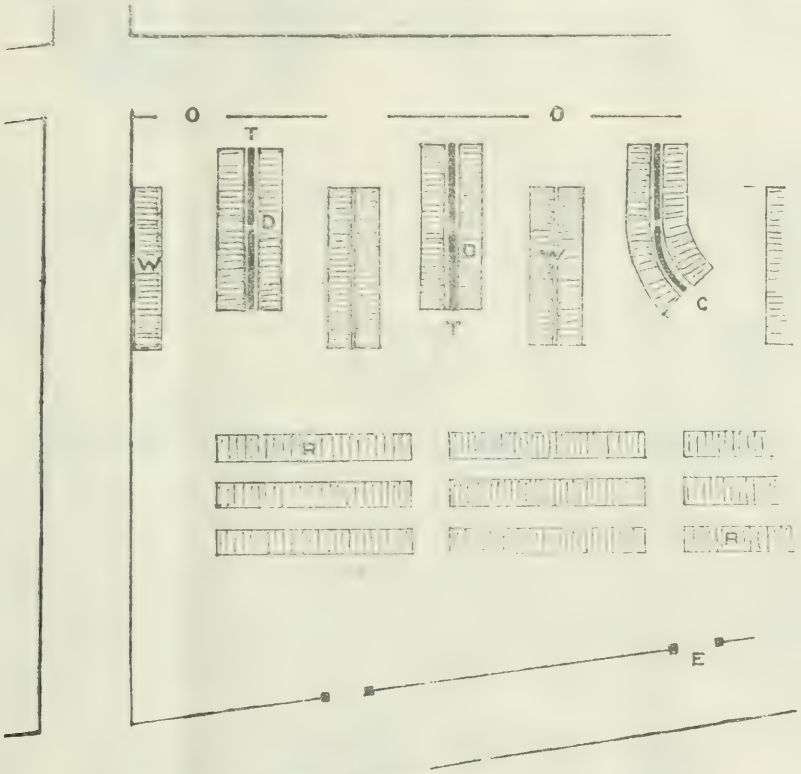
An infantry battalion of full strength marching four abreast, and at the rate of 3 miles per hour, would pass a given point in three minutes, and, allowing two water-carts per battalion, these would arrive at the rate of 1½ minutes apart; but, providing for transport and distances between battalions, the average rate of arrival of water-carts may be three minutes.

To prevent delay the engineer should be prepared as to the capacities of his watering posts. I have recently tested several which had a head of 100 ft., and which, according to recognised formulæ, should deliver at a velocity of 80 ft. per second, $V = \sqrt{2gh} = 8{\cdot}025\sqrt{H} = 80{\cdot}25$. Taking the delivering capacity of a pipe 2 in. internal diameter as $\frac{2^2}{4} \times \frac{\pi}{4} \times 6{\cdot}25$, or ·137 gallon per foot in velocity, these would deliver 10·960 gallons per second. As a matter of fact, I obtained but 1·1 gallon in that time; but as the greater time is taken in getting the cart in position and turning on the water, calculations as to the pressure in mains do not appear to be imperative. However, should a standard be required, my experiments show that for standpipes 2 in. internal diameter the gallons delivered per second are approximate to one-ninth the square root of the head in feet.

From a number of trials I am of the opinion that a water-cart containing 110 gallons (army pattern) cannot be filled in less than four minutes, allowing for pulling up, adjusting fittings, &c., and turning on the water, as well as watering the horses drawing the cart, which should be done from buckets and while the cart is filling.

The assistant engineer in charge of water should therefore be prepared in respect to rate of arrival of water-carts and the capacities of his watering-posts, and give information on the following lines: No. 1 cart fill here; No. 2 cart fill at post on this road × yds. distant, indicated by white flag and marked No. 2; No. 3 cart at post on this road × yds. beyond No. 2, and indicated, &c. By the time the fourth cart arrives No. 1 should be filled ,and away; but it is desirable, if possible, to select other points as emergency stations.

The horses accompanying infantry may be watered from buckets, a supply of which should be obtained. For cavalry, artillery and horsed transports more extensive arrangements are required. Should the supply be from a public main, an open space, park or recreation ground ought to be prepared as a watering place. If the site is not provided with an entrance and exit, both easy of access, the fence must be removed and [illegible] Fall [illegible]



Horses' Watering Ground

[illegible] quicker erection. The brackets consist of a metal [illegible] under those troughs nearest the main, and care must be taken that the brackets do not rest upon the pipe.

[illegible] substitute is applied before the joint is made, and [illegible] after the joint is made.

[illegible] is necessary for the horses to stand on.

[illegible] as far down as possible.

but that the latter, while passing under the canvas, rests on the base of the bracket; otherwise the pipe stands great risk of being fractured.

Troughs may not abut or be near others, except end to end, and if possible a distance of 100 ft. is desirable between sides. The troughs provided by the Royal Engineers are generally from 30 ft. to 36 ft. in length.

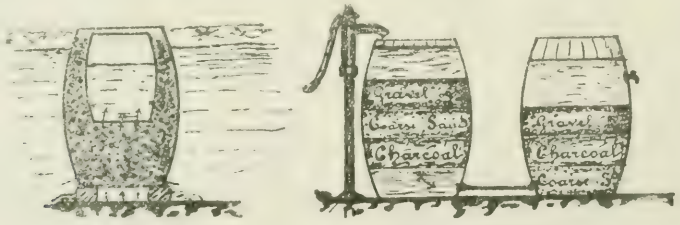
pond, especial care must be taken: whenever possible [illegible] from which the water has been pumped, and drinking direct from the stream or pond should be prevented.

[illegible] pumps which are capable of filling them in thirty-five minutes. The Royal Engineer water [illegible]

Rush Joint. Wood Trough. Tongued Joint.

It may be found necessary to erect emergency standpipes, and the following will be found to be useful dimensions: Service pipe, 1 in. in diameter, and taken [illegible] at which height a bend or elbow is provided with a horizontal branch extending 18 in. with a bibcock at the end. A stopcock, under ground, is desirable, as the standpipes may be damaged, and the precaution will limit waste and facilitate repair.

[illegible] are equipped with [illegible] pumps, but in the absence of these the water or municipal engineer may be required to bring his inventive powers into action, and probably will have in hand some form of contractor's pump, either steam or manual driven. In the absence of anything better, a fire engine could be [illegible] as a manual form of portable pump.



River Filter. Pump Filter.

Horses should have their bits loosened for watering, and care must be taken to prevent their stepping [illegible]

Should canvas be unobtainable, either trenches must be dug and lined with clay, or shallow metal tanks provided; or, if time permits, wood troughs should be constructed. In erecting wood troughs all abutting boards must be planed true (technically known as "shooting" the edges). Sounder joints are made either by tongueing and grooving or by rebating edges and inserting large rushes which swell and close all cracks. Glue is unsuitable for jointing

[illegible] capable of delivering from 1,000 to 10,000 gallons per hour.

In rural camps there is the possibility of an insufficient water supply, and a necessity of marking suspicious water as a reserve for boiling purposes and ablutions. In such cases it is desirable that every class of water should be clearly identified by distinguishing flags. The military generally use a white flag to denote men's drinking water, and one of blue colour for horses. When water is taken from a running stream red denotes an ablution station, [illegible] replaced by green, and red used to denote dangerous [illegible]

limited; it is suggested that, should the familiar pink reaction not appear, the water should be allowed to

manent tinge remains.

the media contained in the latter. When the supply is from a pump two barrels of equal size are pre-

Charcoal, gravel and coarse sand are suitable media for filtration. A perforated iron plate is required to support the charcoal in No. 1 barrel of the pump filter, and fine meshing, or the coarse canvas known as "butter cloth" when used to separate the filtering material

The burning of charcoal has been described in a previous chapter, and is illustrated herewith.

SOME RECENT PUBLICATIONS.*

REPORT OF THE SPECIAL COMMITTEE ON REINFORCED CONCRETE. (The Engineering Society of China.) Shanghai: Kelly & Walsh, Limited.

the Engineering Society of China in December, 1920, with the object of arriving at accurate conclusions as to the properties and uses of reinforced concrete as a building material, with special reference to local conditions. A special feature of the investigation undertaken by the committee is that it consisted largely of actual tests of materials, blocks, beams and slabs, instead of following the undesirable precedent set by some professional bodies in this country of merely collecting and collating information second-hand. Full particulars are given relative to the conduct and results of the tests, and the report concludes with appendices containing a copy of the British Standard Specification for Portland Cement, and analyses of the brands of cement used in the tests.

RAPID EARTHWORK CALCULATION. By C. E. Housden, late P.W.D., India. With diagrams. Price 1s. 6d. nett. London: Longmans, Green & Co.

This little book is intended for the use of engineers

earthwork in connection with railways and canals. The tables included in the book are designed to enable the calculations to be made with greater rapidity and less labour than in any other way, and the method adopted makes it easy for the progress of the work to be ascertained from time to time while it is being carried out. The book should certainly be of considerable use to engineers engaged in such work.

Coast Sand Dunes (By Gerald O. Case, St. Bride's Press, Limited, 24 Bride-lane, E.C., price 5s.).—The rapid increase of sand wastes around our coasts is indeed a serious one, and Mr. Case has done a valuable work in the writing of this book.—*Southport Guardian.*

* Any of the publications reviewed, or referred to as received, will be forwarded by the St. Bride's Press, Limited, on receipt of published price, plus postage in the case of nett books.

THINGS ONE WOULD LIKE TO KNOW.

(Contributed.)

During the time John Smeaton, of Eddystone Lighthouse fame, spent in London he was accustomed to

calling—canal makers, bridge builders, and others

generic term of "engineers." The place of meeting was the "Queen's Head Tavern" in Holborn; and after they had come together a few times the members declared themselves a society, and kept a

matters relating to their business being the object of their meetings. Some personal disagreement, however, occurring through the offensive behaviour of one of the members, Smeaton withdrew from the club, which came to an end in 1792. Is not this the earliest recorded instance of the formation of a society or association of civil engineers?

* * * *

Why is it that, while in the West Midland district of the Institution of Municipal and County Engineers it has been found possible to arrange meetings for every month up to and including April next, there is not a single fixture announced by any of the other districts?

* * * *

Is not the list of papers to be read at the forthcoming annual meeting of the Institution of Municipal Engineers, if not exactly of a formidable nature, an altogether excellent one; and is not the promised contribution of Mr. G. Belson Chilvers, "A Plea for the Better Remuneration of Municipal Surveyors and Inspectors of Nuisances in Small Urban and Rural Districts," one that is likely to elicit a particularly full and free discussion? Will there not, however, be a feeling of regret among members that, owing to "the prevailing circumstances," it was not found possible to hold the meeting in the historic city in which the president-elect, Mr. Matthews Jones, has for so long filled the position of engineer to the corporation?

* * * *

How often in these days is good service recognised and rewarded as was that of a former assistant of the late Mr. William B. Bryan, chief engineer to the Metropolitan Water Board, who, it is related, only twelve months after taking up his appointment, besides being notified of his recommendation for a substantial increase of salary was handed a cheque for £100 as a testimonial from Mr. Bryan's personal appreciation of his work?

* * * *

In what manner is the housing question really going to be met in the future? Is it not evident that as wages increase the cost of building will be higher, and that either rentals will have to increase or State aid will have to be still further resorted to? What will be the ultimate result if local authorities continue to erect houses at prices which are not self-supporting, and how long will the ratepayer be content to work for and pay for the difference in rent of some of his "premiated" neighbours?

* * * *

What

the complaint of a rural councillor the other day that good roads are not of much advantage to ratepayers? Does not a good road encourage more and more traffic, and more expensive upkeep? Does it not encourage the motorist to speed along instead of proceeding quietly and perchance stopping for refreshment or the purchase of some trifle? What are the answers to these questions?

* * * *

Is not the conduct of public affairs very similar, after all, to the conduct of private life? Is it not really more important to consider what is the motif that induces an action rather than the result? Will not an upright and honest motif permanently strengthen the character of a nation or an individual? What citizen of the United Kingdom to-day does not envy the splendid, patriotic, brilliant, yet modest life of the great general who has just passed away at a ripe age? Was there not there a life full of the highest possible motives, though, alas! for this country, the action that should have followed the motive so strenuously impressed on us was never carried into effect, with the result that has been so disastrous to us?

REMODELLING A SEWAGE WORKS.

[illegible] sprinkling filters the sewage treatment plant at [illegible] to handle a daily [illegible] gallons.

[illegible] chamber sewage entered an open brick [illegible] 75 ft. long, 25 ft. 6 in. wide, with an average depth of 1 ft. Two 20-in. brick walls divided it into four equal compartments arranged so that two, three [illegible] time.

Sewage Works Remodelling.

The contact bed was divided into four units, each 85 ft. by 42 ft. area, each enclosed by 16-in. brick walls. Three of the beds were filled to a depth of 4 ft. with slab ranging in size from ¾ in. to 1½ in.; the fourth bed was filled with cinders.

The work of remodelling consisted in removing the existing bottom and excavating to an additional depth of 2 ft. 4 in. As the new bottom was carried below [illegible] was built in the form of an arch to give the necessary stability to the walls, and to assist in the removal of the sludge. The outside walls were raised in height by 6 in., and the changes altogether increased the depth of the tank from 7 ft. to 9¼ ft.

The remodelled tank consists of four units, each of which is again divided into three compartments by a false bottom constructed of 2-in. creosoted yellow pine. This false bottom makes a slope of 40 deg. with the vertical. The upper two compartments are settling compartments, and the lower and larger compartment is the sludge-digestion compartment. The total settling capacity amounts to a retention of 1·35 hours when the plant is operated at the rate of 500,000 gallons daily. The total capacity of the sludge-digestion chamber figured below the level of the walls is 5,470 cub. ft.—about 50 per cent larger than required by established practice, observes Mr. Alexander Potter in describing the work in *Engineering Record*. Three 6-in. sludge pipes extend down into the sludge-digestion chamber of each unit.

The cost of remodelling the contact beds into a sprinkling filter was somewhat more than was expected, as it was found that less than [illegible] could be used in the new filter.

Thames Conservancy Board.—The tender of Messrs. Cooper, Wettern & Co. has been accepted for paving for the wharf extension at Kingston (Surrey) at 8s. 10d. per super. yard, £464 in all; and that of Messrs. J. Lysaght, Limited, at £296 for iron and steel work for Molesey Weir.

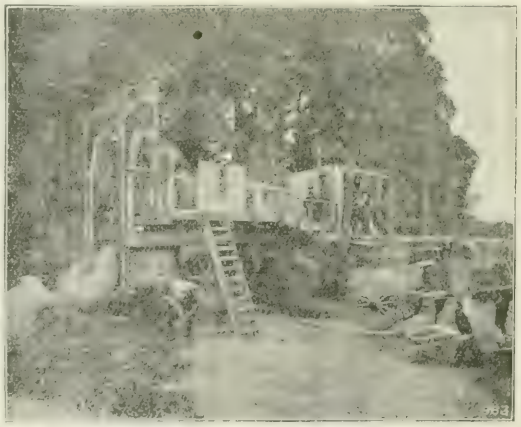
Workmen's Cottages in Rural Districts.—Replying to a question in the House of Commons on Tuesday, Mr. Herbert Samuel, President of the Local Government Board, stated that since August 1st last the board had sanctioned loans under Part III. of the Housing of the Working Classes Act, 1890, for the erection of 678 houses by thirty-seven rural district councils in fifty-eight parishes. The board had also sanctioned loans for the purchase of land for the same purpose by five other rural district councils in seven parishes.

DRYING AND MIXING OF ROAD MATERIALS.

A NEW MACHINE.

On Friday last we had an opportunity of inspecting at Messrs. [illegible] drying, and for tar or bitumen mixing, the plant being supplied to Mr. A. Dryland, the county surveyor of Surrey, by the Ransome-verMehr Machinery Company, Limited, of Brunswick House, Westminster, the owners of the patent rights.

We were very considerably impressed with the working of this equipment, more particularly in view of [illegible]



Ransome-VerMehr Drying and Mixing Machine.

ling on that particular day. It was being used for pitch macadam foundations made of unscreened, scarified road material mixed with pitch. A very large percentage of the finest dust and even slurry was contained in the bulk of the material, and the test was therefore an unusually severe one.

The machine works normally at the rate of, approximately, 50 tons per day, but is, under favourable conditions, capable of considerably exceeding this quantity. The batch is ½ cub. yd.

The wet material is delivered by means of an elevating skip to the first revolving drying drum, in which it remains for a period governed by the amount of moisture contained in the stone, and is then delivered to a second drying drum, from which, in due course, it is discharged into a mixer of the double-axle revolving paddle type. During its passage through the two drying drums it is brought into intimate contact with hot gases which are drawn direct from the coke furnace by means of a small fan.

The machine itself is of a very compact type, and is mounted on strong road wheels fitted with springs, so that it forms a semi-portable unit. Taking the plant from a constructional point of view, it was hardly necessary for the company to mention that it was of British manufacture throughout, as it was obviously a very strong and workmanlike machine.

So far as actual results are concerned, the inspection of the material as laid in the roads offered very conclusive proof of the efficiency of the plant. On top

The Surveyor

And Municipal and County Engineer.

of the pitch-macadam foundations a bitumen carpet is laid, resulting in a road of most excellent finish and even surface, on which Mr. Dryland is to be highly congratulated.

We understand that the particular machine in question is likely to be used for the bitumen carpeting work, as well as for the foundation work, in the near future.

The makers appear to have concentrated their efforts on eliminating labour costs, and we particularly noticed that only one man was employed for actually working the machine itself, this man controlling the elevator skip, the two drying drums and the mixer. This feature is undoubtedly of very great importance to municipal engineers who are using the plants for work of this nature.

We understand from the Ransome-ver Mehr Machinery Company, Limited, that they manufacture these plants in both smaller and larger sizes, and that they cover the complete range of tar-macadam or bitumen road work.

Cumberland Roads.—The county surveyor of Cumberland, Mr. W. F[illegible], in his annual report states that the mileage of the rural main roads under the direct control of the county council at the end of the year was over 2[illegible] miles. The gross expenditure on the rural road services during the year had been £38,708, and, deducting £4,156, amounts received from the Road Board and other sources, the nett total was £34,552. The average cost per mile on the total nett expenditure, including surface improvement works, was £74 13s. The average cost per mile to compare with this figure last year was £66 2s., the increase being chiefly due to the extra amount of surface improvement works, increased cost of team labour, and increased wages of workmen. The sums granted by the Road Board toward the cost of main road surfacing with tar-macadam, approved granite and whinstone, widenings and improvements during the year, amounted to £6,930, including £750 granted for work to be carried out in urban districts. The council have approved the minutes of the Highways Committee, in which it was stated that a sub-committee had reported that they had considered a scheme prepared by the county surveyor for the classification of main roads in the county, and having approved it, they submitted the schedules to the committee. The sub-committee recommended that the classification of the various district roads should be left in the hands of the county surveyor to settle with the district councils and forward to the Road Board. As the necessary details required in connection with such classification involve very heavy work, they recommended that the county surveyor should be empowered to engage assistance, at a cost not exceeding £2 per week, to enable the work to be carried out.

CLEANING OF WATER MAINS.

The cleaning of 3½ miles of 7-in. water main within a week for the Newtown and Llanllwchaiarn Urban District Council is quite a notable piece of work which has just been completed by the "Eric" Water Main Scraper Company, Limited, of Chepstow, Mon.

For the first 2 miles of its course this main passes over some very rough and awkward ground, crossing five deep ghylls or coombes, and falling and rising as much as 90 ft. in a few chains' length.

The cleaning of the first section—a length of 48 chains—had been previously attempted by the local staff. The machine used had jammed, and was cut out eight times before the length was finished, and the work generally had given so much trouble in other ways that it was decided to place the cleaning of the remaining lengths in the hands of the above-named firm, who make a speciality of this difficult and trying work.

The "Eric" Company's staff commenced on October 14th and had completed the whole 3½ miles on the 21st.

Hatch-boxes fixed at intervals divided the main into six sections. The water was turned off each day at 2 p.m., and the work for the day completed, and the water turned on again by 6 p.m., and although

VALVE PASSED BY "ERIC" MACHINE IN MAIN CLEANING OPERATIONS.

curtailment of the supply was anticipated and notice given to that effect, little or no inconvenience was experienced by the water consumers, who included some 300 Territorials training in the town.

Trouble was experienced in the first length owing to a misunderstanding, the water being shut off by the reservoir keeper while the machine was running. Eventually the machine was run through this length twice without a stop.

At another point the main rises 85 ft. at a steep angle, and then follows high ground cut by the hydraulic gradient. No difficulty was experienced in this length, however, and the machine ran at a steady pace up the bank, and from hatch-box to hatch-box without a stop. This applies to all the other sections, with one exception, the fifth. In this case the machine picked up a piece of timber 6 ft. long by 5½ in. by 3 in., which it carried to the hatch-box, where it had to be broken up before it could be removed.

The result of the operations is that the working pressure in the town is increased by 20 lb.

The company has now been asked to undertake the cleaning of the town service mains, and it is confidently believed that there will then be an adequate supply for fire purposes, and that the supply to the higher levels will be still further improved.

Assistants' and Students' Section.

CONDUCTED BY SYDNEY G. TURNER, [illegible].

All communications in regard to this page must be addressed to the Editor, St. Bride's House, 21 Bridestreet, Fleet-street, E.C. Black ink must be used in writing. Assistants' Section is for the benefit of the Assistant. Correspondents are invited to submit questions for consideration and answers to the questions which appear. For the contributions considered to be the most meritorious, one or more premiums on books will be awarded monthly. Diagrams must be drawn to scale on separate sheets, ready for reproduction.

THE MONTHLY PREMIUM.

Mr. [illegible] Harrison, of Middleton [illegible], has been awarded the premium for the month of [illegible] for his answer to question 433 (Roof Principals). Mr. [illegible] Lawrence, of [illegible], has been awarded the premium for his answer to question 434 (Bridge Design). Mr. [illegible] Griffin, of [illegible], has been awarded the premium for his answer to question 435 (Water Supply).

QUESTIONS.

This week answers are invited to the following questions:

438. Strength of Materials.—If a straight prismatic timber floats in a horizontal position with a weight of 4 cwt. hung to each end, what will be the [illegible] at the centre of its length?

439. Stability of Wall. How high may water rise on the side of a vertical wall 9 ft. 6 in. by 27 in. thick of material weighing 143 lb. per cubic foot, before the resultant force at the base of the wall passes outside the [illegible]?

440. Bending Moment.—A girder, 15 in. deep and 2 ft. 6 in. [illegible] carries a uniform load of 20 tons, and in addition a load of 10 tons 5 ft. from the left abutment and a load of 10 tons 8 ft. from the right abutment. Draw the bending moment and shear diagrams. (Alex.)

441. Bending Moment.—A beam of 100 ft. span has a load of 2 tons per lineal foot uniformly distributed over 40 ft. of its length commencing at 20 ft. from the left-hand abutment. Draw the bending moment diagram. (Alex.)

[The Editor is at all times glad to hear from readers who desire to submit questions regarding matters of general interest, points of daily practice, &c., for insertion in the "Assistants' and Students' Section." Questions which are published are taken into consideration, as well as other matter, in awarding the Monthly Premium.]

REPLIES TO QUESTIONS.

436. Ventilation. What effect has (*a*) the breathing of animals and (*b*) the combustion of fuel upon the purity of the atmosphere? (T. R.)

During muscular and mental action the complex hydrocarbons of the cells composing the active tissues are oxidised by the oxygen dissolved in the blood derived from the lungs; the oxidation develops the necessary energy for the continuation of the activity of the tissue; the resulting compounds are carbon dioxide and water, both of which are dissolved in the blood, and afterwards exhaled by the lungs, and at the same time the blood is re-oxygenated. The wasted tissues are renewed by the hydrocarbons derived from the food in the lower intestine and dissolved in the blood. Thus life is essentially a process of combustion; the average healthy man in the course of twenty-four hours develops about 3,400 foot-tons of energy. Under normal conditions the volumetric constitution of air expressed as a percentage is: Oxygen, 20·8; nitrogen, 79·2; carbon dioxide, 0·03 to 0·04. The quantity of water vapour present is variable, and in addition there are traces of ammonia, nitric acid, and organic matter; the normal quantity of carbon dioxide is 4 parts in 10,000. Expired air contains about 100 times as much carbon dioxide as fresh air; where living beings are congregated closely together the air becomes vitiated, not only by the absorption of oxygen and the giving out of CO_2, but also by noxious exhalations from the skin and lungs. To a person going from the fresh air into an occupied room containing 7 to 8 parts of carbon dioxide in 10,000 a disagreeable sensation is experienced; if the proportion rises as far as 20 parts [illegible] varied sensations are not due to the mere presence of the extra carbon dioxide, but to the organic matter and vapours. The analysis of expired air [illegible] gives: Oxygen, 16·4 and carbon dioxide 4·3 parts in 100, the remainder being water, vapour, and albuminoid ammonia. The temperature of the expired air is approximately 79 deg. Fahr.; so that the air rises towards the ceiling. It is essential that this vitiated air is removed by adequate ventilation before it has time to cool and descend. A very extreme example of the contamination of air due to insufficient ventilation is the Black Hole of Calcutta. (*b*) Fuel consists of carbon and hydrogen combined with one another in various proportions and with other elements to form complex chemical compounds. During the process of combustion the molecules of the fuel are decomposed, the carbon combines with oxygen to form carbon dioxide, and the hydrogen forms water vapour with the oxygen. The combustion of 1 lb. of pure carbon requires about 13⅓ lb. of air, and results in the formation of 3⅔ lb. of carbon dioxide; so that adequate ventilation must be provided for the combustion of fuel, otherwise the oxygen of a closed space is very soon consumed, and replaced by carbon dioxide; also combustion ceases and life becomes insupportable. In addition, various impurities exist in the fuel, such as sulphur and phosphorus; these result in the formation of the corresponding oxides, which are very deleterious to life. Also with fuel there is the smoke nuisance, resulting in the formation of fogs. The acids set free during the combustion of fuel in towns have a destructive effect on the surface of stone buildings. The only way to minimise the latter effects is to centralise the development of power from fuel to districts where the fuel is mined and distribute the energy electrically. The effects of air can be avoided by providing sufficient cubical space per person or animal, and adequate means of ventilation.

437. Underpinning.—A carved column in a church is showing signs of settlement. Describe, with sketches, the method of timbering and underpinning the [illegible]. (L. C. B., *Clevedon*.)

The querist does not state what the column in question is supporting, so it is assumed that it is one of a series, and situated between two arches. The first process would naturally be to relieve the column of as much weight as possible. This could be done by forming strong timber centerings to each of the arches, as shown in Fig. 1. The centres should be supported by stout dead shores, resting upon a sole piece, and the whole must be tightly wedged up to the underside of the arches. Preparations for underpinning the column may now be commenced. The necessary portion of the church floor having been removed, the ground should be excavated down to the underside of the column's foundation. The excavation must be wide enough for the men to work in comfortably, and should be square in plan. At the bottom of the excavation two trenches, parallel to each other, and one on either side of the column, should be dug. The trenches should be about 12 in. from the pillar and 12 in. deep. They should then be filled with concrete, the surface of which should be about 5 in. below the level of the underside of the column. A flat piece of timber about 4 in. thick is then laid on each strip of concrete. Two pointed iron bars are then carefully driven under the column, so that they project about 18 in. on either side and partly over the wooden sleepers on the strips of concrete. Then by driving in oak wedges between the irons and the sleepers these bars can be brought up tightly against the underside of the column. After this the work of underpinning can be commenced. It is always advisable in underpinning operations to do the work in very small sections; therefore it

will not be advisable to underpin more than a quarter of the column at one time. The ground beneath must be excavated under each part of the column until a suitable and safe foundation is reached, the top of the column well rammed up and the new work carefully joined to the old. The concrete foundation must be allowed to set before the brickwork and the old work is joined up with new work in cement mortar, and, if necessary, the old work is grouted up with liquid cement mortar.

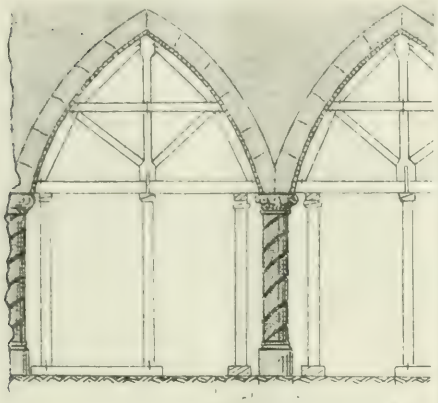

Fig. 1.

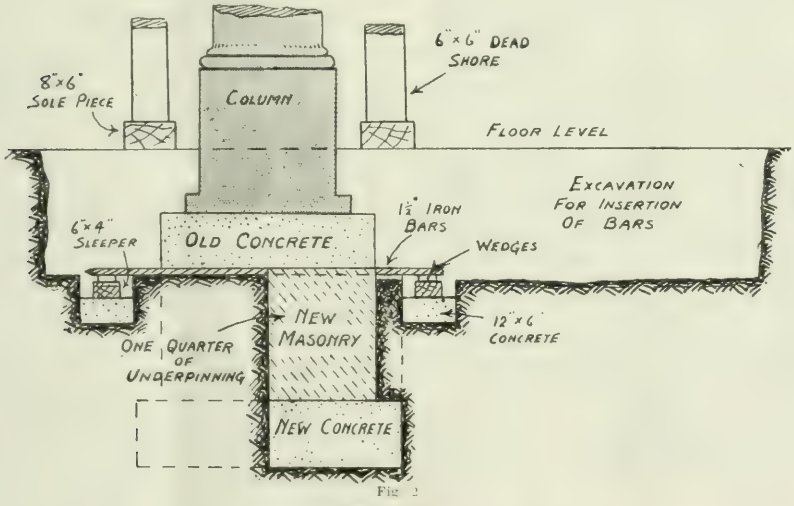

Fig. 2.

UNDERPINNING.

wedges in cement mortar. The slate wedges must be driven in very gently. When this is sufficiently set, the next quarter can be underpinned, and so on. The iron bars may be left in on completion of the work to prevent disturbance. In practice it would no doubt be better to take down the entire column and rebuild it, after having supported the arches. Fig 2 shows the position of concrete, sleepers and bars. (P. H., *Middleton.*)

Kensington and the Road Board.—The Kensington Borough Council have intimated to the Road Board a desire to carry out a scheme for the improvement of the road crusts in the borough, at a cost of £40,000, conditional on the board making a grant of half the cost and lending the remainder free of interest. The board have replied that the proposal can only be considered if the Local Government Board advise that, in view of the state of employment in Kensington, additional road improvement works should be initiated.

CORRESPONDENCE.

Sir, though I would persuade, I'll not constrain.
Each man's opinion freely is his own
Concerning anything, or anybody.
—MASSINGER: "The Fatal Dowry," Act II., 2.

THE TRAINING OF MUNICIPAL ENGINEERS.

To the Editor of THE SURVEYOR.

SIR,—Having read the letter in the report of the Institution of Civil Engineers with regard to the training of municipal engineers, perhaps the views of an assistant who is going through the mill may not be considered out of place.

I may at once take that I am in perfect agreement with point put forward by the correspondent writing under "A Small Corporate Member and M.I.M. and Cy.E."

I was one of the (perhaps Mr. Platt would say) unlucky individuals whose fortune it was to be articled to an engineer and surveyor in a comparatively small town who was not a corporate member of the Institution of Civil Engineers. Since then, however, I have had a large experience in good-sized towns under a corporate member of the Institution of Civil Engineers. I have carefully noted the career of pupils in the larger offices, and have not the slightest hesitation in saying that if I had the chance of serving my articles over again and could choose between a small town and a large one, my choice emphatically would be with the smaller town. I find that in the larger towns pupils are simply thrown headlong into the office and are left entirely to their own resources. From this it appears to me that other assistants in the office are expected to teach the pupil his work, and are also expected to receive no additional remuneration for so doing. Is it therefore likely that an assistant is going to spend both time and trouble with someone else's pupil, in which he has absolutely no interest? The consequence of this is that pupils are left to find out things for themselves, and so get very little training of an actual practical character.

Again, the work in the larger town may certainly be on bigger lines, but that is the most that can be said about it, for the problems that arise are certainly not more complicated, if as much so, and my own experience is that the work is actually carried out in a much inferior way to that of the small town. Many reasons may be given why this is so, but it would take too long in a letter of this description to enumerate them.

Coming to the point of examinations, I found that I derived far greater benefit in studying for the examination of the Institution of Municipal and County Engineers than for the examination of the Institution of Civil Engineers, for the majority of the work done for the Institution of Civil Engineers' examination is of very little use in a municipal office, and I cannot but think that the examination

be supported, this examination is very undeservedly [illegible] County Engineers owing to this very fact. Why [illegible] institution which practically ignores municipal work when they have a splendid one of their own?

[illegible] ing chief appointments actually are qualified, if examination? As "M.I.M. and Cy.E." says in his letter, [illegible] have never even served any articles, much less passed [illegible] laugh up their sleeves when they see what an assistant [illegible] nations.

[illegible] offices, where pupils are turned out like sausages [illegible] we hear so much of the overcrowding of the profession, of chiefs complaining of inefficiently trained assistants, and the ridiculously low salaries now being paid to assistants?

It will be seen that I offer no suggestions as to how this state of things is to be remedied, but merely [illegible] be drawn.—Yours, &c.,

ASSISTANT.

[illegible] 14, 1914.

THE FUNCTIONS OF A MUNICIPAL ENGINEER.

To the Editor of THE SURVEYOR.

Sir,—I am pleased to know [illegible] been taken in my remarks regarding reinforced concrete in reservoir construction, and in reply to Mr. H. C. Johnson, of University College, Cork, I would [illegible]

(*a*) I recommend that if a reservoir is greater in depth than 30 ft., while it should be constructed in reinforced concrete, buttresses should be added at the back of the wall. Without buttresses, and where the walls are less than, say, 30 ft. high, their thickness should be—First, 6 ft. 5 in.; beyond this, 2 in. increase in thickness for every additional 6 ft. in height. Perhaps I did not make this clear in my lecture.

[illegible] for walls over 20 ft. high.

(*c*) Only the "*best* of aggregates, correctly proportioned, and an absolutely first-class cement," should be used in reinforced-concrete work; 1,800 or even 2,000 lb. per square inch at thirty days is then quite possible, and should be expected.

(*d*) Yes. Taking 600 lb./in.² on concrete. If you refer to my lecture you will see I suggested a thickness of 7 in. for a 10-ft. wall—namely, first, 6 ft. 5 in.; next, 6 ft. 5 in. by 2 in. Probably 5 in. named by me in another part of the lecture was rather light. 4 in. at top of wall and 7 in. at bottom would have been better.

(*e*) It is wise to disregard the weight of water on the heel of a cantilever wall, owing to the possibility of upward water pressure.—Yours, &c.,

E. R. MATTHEWS.

IMHOFF PATENT SEWAGE TANK.

To the Editor of THE SURVEYOR.

SIR,—We applied to the Board of Trade on August 24th last, that the above patent should be revoked in favour of all public authorities undertaking sewage purification works. After a certain amount of correspondence with the Board of Trade, we were requested to apply for the suspension of the letters patent in our own names, and did so on September 10th. The case was heard on October 28th, and the tribunal clearly indicated that they should consider the Royalty of 10 per cent now charged excessive if no advice was included, and that the Board of Trade would probably [illegible] the apparatus, of about 5 per cent in the case of small [illegible] where a [illegible] were installed.

We [illegible] copy of a letter we have just received from the Board of Trade.—Yours, &c.,

STRACHAN & WEEKES.

9 Victoria-street,
Westminster, London, S.W.
November 19, 1914.

[COPY.]

Board of Trade,
C. 15764. Whitehall, S.W.
November 14, 1914.

GENTLEMEN,—I am directed by the Board of Trade to refer to your application to the Board of Trade to order the avoidance or suspension of Letters Patent No. 10984 of 1907, and to inform you that the Board of Trade have decided to make no order in the matter.

I am to state that the sole reason of the board for not granting the application is that it would not be effectual, seeing that you do not propose yourselves to use the patented apparatus, but only to recommend its use. I am to add that if any local authority desire to use the apparatus, they should make application under the rules for that purpose, when the board could consider the advisability of suspending the patent in their favour, and of fixing such Royalty as might be thought reasonable.

I am, Gentlemen,
Your obedient Servant,
(Signed) G. S. JAMES.

Messrs. Strachan & Weekes,
Consulting Engineers,
9 Victoria-street, Westminster.

HUTS FOR SOLDIERS.

[It may be useful to read, at the present time the description which was given of the buildings that were erected to the north-east of Crownhill, Plymouth, from War Office plans.]

They consist of about forty-six hutments, the greater portion being of one pattern and similar in detail to those which were put together in South Africa for the accommodation of troops. Each hut is 75 ft. long and 22 ft. wide. It stands a foot or two off the ground, being supported by brick pillars and a cement bordering, ventilation being provided by means of perforated bricks let into the cement here and there. On an average each building is 10 ft. high. The material used in the construction is corrugated iron with match-boarding and felt lining. The roof is ingeniously designed, both in respect to ventilation and to keep out the rain. Double boarding of the roof is so arranged as to allow a continuous current of air to pass between the two layers of matchwood, while on the summit is a curved corrugated iron ventilator. There are fourteen casement windows, and the ante-rooms include a small but well-fitted store, and a mess-room for the non-commissioned officers. Each of the huts will accommodate twenty-five men. There are thirty-two huts of this type, and all are heated by slow combustion stoves and lighted with oil lamps. Before being occupied the interiors were stained, sized, and varnished, and the exterior woodwork painted. There are two cook-huts, in connection with which there are baths for the use of the men. These are built upon a basement of concrete and measure 64 ft. by 18 ft. The sergeants' mess is of similar dimensions, and a section of it is set apart for cooking. In interior construction the canteen and recreation huts differ considerably from the others. They are fitted with baths, and the bar fittings are similar to those in barracks of a more permanent standing.

The officers' quarters are separated from those of the men by a space of about 100 yds. They measure 64 ft. by 18 ft., and have lavatories attached. Each of the four huts set apart for living in is partitioned off into rooms, with separate entrances from the exterior. In a few instances the accommodation is for two officers. The individual compartments measure 17 ft. by 11 ft., and are slightly higher than in the men's huts. In the centre of the group is the mess, fitted with lavatories, and connected to the kitchen hut in the rear by a corridor.

LOCAL GOVERNMENT BOARD INQUIRIES.

The Editor invites the co-operation of SURVEYOR readers with a view to making this section more useful. Local Inquiries are held, and details given, as follows:—

INQUIRIES HELD.

Clitheroe T.C. (November 6th. Mr. Edgar Dodgson).—£1,200 to [illegible] Water Scheme. The following surveyors, Mr. A. E. Blezzard, stated that the work was done in a satisfactory manner. The council had recommended the Board to recognise it as a first-class road. In parts it was only 21 ft. wide, and there was no footpath.

Hull T.C. (November 7th. Mr. R. H. Bicknell).—£7,500 for the reconstructing a boating lake and [illegible] Pickering Park. It was explained that it was proposed to make the lake 2,000 ft. in length and 175 ft. average width. The proposed depth was 3 ft. The former lake was only 2 ft. 6 in. deep, but experience showed that this was not enough, and the lake was deepened a further 6 in.

Llanelly U.D.C. (November 13th. Mr. F. H. Tulloch).—£1,360 for the purchase and laying out of land at Bigyn as a recreation ground. The evidence of Mr. George Watson was that the proposal was to extend pleasure grounds given to the town in 1912.

Ludlow T.C. (November 17th. Mr. H. S. Stewart).—£4,000 for the purchase of land and for the erection of working-class dwellings.—The town clerk, Mr. J. H. Williams, said it was proposed to erect altogether twenty-one houses, at a cost of £3,780, the rents to be 4s. 6d. per week. The income from them would be £249 14s.

Neath T.C. (November 13th. Mr. H. R. Hooper). This was an inquiry into the application for a Provisional Order to extend the council's borrowing powers in connection with the Corporation Waterworks Act. The town clerk explained that the borrowing powers under the Act of 1894 and Provisional Order of 1898 were now nearly exhausted. A sanction of £6,000 had been borrowed, and only £3,106 remained under the powers to be borrowed; £14,000 had been repaid. The water undertaking was in a satisfactory condition and was self-supporting.

Nottingham T.C. (November 12th. Mr. P. M. Crosthwaite).—£11,100 for the widening of Hucknall-road from 40 ft. to 60 ft.; £11,000 for piling and foreshore works on the south bank of the Trent; £700 for a road improvement on Bulwell Forest and the laying of a concrete floor to the children's paddling place created by the Bull Well; £600 for the extension of the Sycamore-road recreation ground by the laying of another bowling green; and £3,000 for enlarging the sewer [illegible] Market-road and Meadow-lane. The city engineer, Mr. A. Brown, said the excavation necessary on Hucknall-road would probably occupy 150 to 200 men [illegible] or four months. The Trent work was dependent on the height of the water, and would probably be carried over twelve months. It would largely employ unskilled labour. The third and fourth [illegible] would employ a big proportion of unskilled labour, and the culverting would be done principally by skilled labour. It was asked that the money should be advanced for the full term of sixty years.

Sheffield T.C. (October 10th. Mr. R. H. Bicknell).—£2,000 for the widening of Snaygate-road. Mr. C. F. Wike, M.INST.C.E., the city engineer, stated that the road led from the city to the Lodge Moor fever hospital, and that its present average width was from 20 ft. to 30 ft. The length of the proposed improvement was about 675 yds., and it was intended to make the road 50 ft. wide. Inquiring later into a proposed expenditure of £689 on the purchase of certain land and the laying out of a portion of the ground as a bowling green, the inspector remarked that the amount allowed for the making of the green [illegible] was remarkably small. Mr. [illegible] said [illegible] some time ago the council [illegible] and it was [illegible]

APPLICATIONS FOR LOANS.

Chesterfield T.C.—£7,020 for a sanitary conversion scheme.

Elland U.D.C.—£[illegible] the Low Wall sewerage scheme.

Failsworth U.D.C.—£1,197 for private street works.

Hucknall U.D.C.—£3,400 for laying out Titchfield Park.

Ipswich T.C.—£6,315 for street improvements.

Littlehampton U.D.C.—£200 for sewer ventilation.

Maldens and Coombe U.D.C.—£1,545 for private street works.

Malton R.D.C.—£14,965 for works of water supply.

Newport (I.W.) T.C.—£2,000 for new plant for the gas works, the raising [illegible] gasholder [illegible] tank.

Northfleet U.D.C.—£7,200 for the purchase of the Northfleet House estate.

Poole T.C.—£500 for the purchase of a site at Corfe Mills for the purposes of a [illegible]

Ramsbottom U.D.C.—£8,631 for road improvement.

Salisbury T.C.—£398 for road works.

Sheffield T.C.—£20,000 for a tuberculosis sanatorium.

Shrewsbury T.C.—£1,200 for school extension.

Southend T.C.—£3,257 for making up certain streets, and £4,166 for works of sewerage.

Stroud U.D.C.—£500 for working-class houses.

Sunderland R.D.C.—£21,000 for the erection of eighty-three workmen's dwellings.

Swansea R.D.C.—£21,050 for a sewerage scheme for Fforestfach and Waunarlwydd.

Teddington U.D.C.—£1,000 for a motor fire engine.

Tunbridge Wells T.C.—£7,520 for new electrical machinery.

Worcester T.C.—£9,875 for two additional water filters and other works.

LOANS SANCTIONED.

Armagh R.D.C. £1,080 for the provision of cottages.

Brierfield U.D.C.—£320 for works of street improvement.

Carnarvon T.C.—£290 for a hospital, and £150 for improvements at the public slaughterhouse.

Colchester T.C.—£3,110 for a tuberculosis pavilion.

Harwich T.C.—£4,350 for works of sewerage.

Holborn B.C.—£15,568 for street widening.

Keighley T.C.—£17,000 for the electricity undertaking.

Littlehampton U.D.C.—£3,300 for the erection of a hospital.

Penybont R.D.C.—£1,560 for road improvement.

Sandown U.D.C.—£368 for the purchase of a steam roller.

Shanklin U.D.C.—£3,600 for the purchase of The Landslip.

Southend T.C.—£4,512 for the improvement of the Broadway.

Surbiton U.D.C.—£2,137 for a chapel and lodge at the new cemetery.

Surrey C.C.—£8,000 for the purchase of property for the purposes of a hospital.

Tandaragee R.D.C.—£1,300 for a water supply for Laurelvale.

Wakefield T.C.—£13,145 for working-class houses.

Welwyn R.D.C.—£4,505 for workmen's dwellings.

Yarmouth T.C.—£1,200 for laying out Southtown Common.

Municipal Work in Progress and Projected.

The Editor invites the co-operation of Surveyor *readers with a view to making information given under this head as complete and accurate as possible.*

The following are among the more important projected works of which particulars appear below: Buildings—Ipswich, Sheffield, Surrey; housing and town planning—Northampton, Rugby; roads and materials—East Riding, Glasgow, Herts, Neath, Ramsbottom; sewerage and sewage disposal—Doncaster; water, gas and electricity—Northwich. Particulars of other works projected will be found in our "Local Government Board Inquiries" page.

ADMINISTRATION.

Staffs C.C.—A recommendation was submitted by the Finance Committee last week that the staff of the county surveyor, Mr. J. Moncur, should be taken over and paid direct by the council, and that the salary of the county surveyor be £850. Questions were asked and answered by Mr. G. Macpherson, chairman of the Finance Committee, who explained that the proposals in regard to the county surveyor's department would be adjourned until after the war.

BUILDINGS.

Blackrock U.D.C.—Official sanction has been given to a scheme for the erection of an electricity generating station.

East Riding C.C.—Steps are to be taken for the purchase of Raywell House for the purpose of a sanatorium. The estimated cost of the scheme is £13,075, or £205 per bed.

Ipswich T.C.—Plans have been approved for the extension of the borough mental hospital, at an estimated cost of £3,300.

Lanark T.C.—The council have approved of a scheme to make a considerable addition to the present fever hospital at an estimated cost of £2,000.

Lanarkshire C.C.—It has been agreed by the Upper Ward District Committee to erect a pavilion for twenty-four beds, and the necessary staff accommodation, at Roadmeetings Hospital, Carluke.

Oldham T.C.—Extensions are to be effected at the tramway car shed at Hollinwood, at an estimated cost of £1,600.

Penrith R.D.C.—The surveyor, Mr. W. S. Lythgoe, has received instructions to prepare plans and estimates for a lodge at Tyegill.

Saffron Walden T.C.—The corporation have approved the plans of Mr. Hugo R. Bird for an isolation hospital.

Sheffield T.C.—The Health Committee recommend the erection of two dispensaries, at an estimated cost, including furnishing, of £6,151.

Shrewsbury T.C.—Purifying plant is to be installed at the public swimming bath, at an estimated cost of £850.

Shropshire C.C.—On the recommendation of the Roads and Bridges Committee, it has been agreed to strengthen and widen Ercall Mill Bridge at a cost of £1,250.

Surrey C.C.—The Finance Committee have adopted an estimate of £5,500 for constables' cottages in several districts.

Tyrone C.C.—With reference to the proposal to extend the accommodation of the sanatorium from twenty-eight to fifty-six beds the Local Government Board wrote that it would be wiser not to make the extension, but to use the money proposed to be spent on it in furtherance of a scheme for local homes for patients returning from the sanatorium. They preferred the small sanatorium with local homes to the large one without them.

HOUSING AND TOWN PLANNING.

Bridgwater R.D.C.—Amended plans have been approved for the housing scheme.

Clydebank T.C.—The council are recommended by a committee to purchase 16 acres of land on Kilbowrie-road for the erection of artisans' dwellings.

Northampton T.C.—In connection with the Hollowell water scheme it is proposed to provide twenty workmen's cottages at a cost of £220 each.

Northwich U.D.C.—The plan of the surveyor, Mr. J. Brooke, has been approved for the erection of houses at Cinderwick.

Renfrewshire C.C.—The Lower District Committee have resolved to erect cottages for their roadmen at Bay[illegible] and Kennoch.

Rugby R.D.C.—Plans of the proposed new cottages have been approved. The estimated cost per pair of those at New Bilton is £440, and for the rural cottages the cost is £350 per pair.

REFUSE COLLECTION AND DISPOSAL.

Crompton U.D.C.—Application has been made to the Public Works Loan Board for the advance of £4,012 for provision of a refuse destructor and steam disinfector in accordance with sanction received from the Local Government Board.

ROADS AND MATERIALS.

Aberdeen C.C.—The Deeside District Committee have appointed a committee to consult with other local authorities on the proposed reconstruction of the old military road from the Dee to the Spey, from Ballater by way of Tomintoul to Cranstown-on-Spey.

Atcham R.D.C.—Improvements, towards which Lord Barnard has contributed £200, are to be carried out at Kenley Hall-road.

Bognor U.D.C.—A scheme is being prepared for widening Marne-road at a cost of £9,000.

Derby T.C.—Property valued at £660 is to be purchased for the widening of Queen-street.

Down C.C.—The council have adopted a report of the Proposals Committee, recommending that the Local Government Board should be called upon to make an order amending the conditions of the assistant surveyor's service, with a view to their number being reduced and the remainder becoming whole-time officers, and to raise the limit of road expenditure by £10,000 in all the rural districts except Castlereagh and Moira.

Dumfries T.C.—A decision has been reached to proceed with the King-street improvement scheme.

Durham C.C.—The council have agreed to the scheme of the Chester-le-Street Rural District Council for an improvement at Havanale Bank, Washington-road. The estimated cost is £1,050. The gradient of Pelton-road is also to be improved at a cost of £2,460.

East Riding C.C.—Negotiations are proceeding with respect to the improvement of the main road between Hessle and Hull, the cost of which is estimated at £7,434.

Forfarshire C.C.—An improvement scheme is to be carried out on the Marykirk-to-Logie-Pert road, at an estimated cost of £1,438, and towards this the Road Board have sanctioned a grant of £705.

Glasgow T.C.—A joint deputation representing the town council and the Dumbarton County Council has had an interview with the Road Board as to their making a grant towards the cost of the construction of the proposed extension of Great Western road from Anniesland Cross to Duntocher. The proposed boulevard is to be 4¼ miles in length and 140 ft. in breadth. It is estimated to cost £258,000. An effort is to be made to obtain a grant of £250,000.

Hartlepool T.C.—Plans have been approved for making up Back Hart-road and Back Union-road.—It has been agreed to fix a scarifier to the steam roller.

Hastings R.D.C.—It has been resolved to make up certain streets in the Shotton and Hawarden districts.

Herts C.C.—A scheme of road improvement, estimated to cost £28,000, is to be carried out at Bushey.

Highworth R.D.C.—Plans have been approved of the proposed improvement of the Draycott road leading to the camp, the cost of which is estimated at £3,327, and the War Office has been invited to contribute towards the scheme.

Keighley T.C.—The space round the bandstand in Victoria Park is to be tar-macadamised at a cost of £200.

Middlesex C.C.—An intimation has been received from the Road Board that they were prepared to make

...cost instead of the cost of wood paving. Tarmpaving and ...g Philippine and Westdene ...

Mold U.D.C.—The surveyor, Mr. David Thomas, has ... estimates to prepare the ... of ... for all ... in his ...

Neath R.D.C.—A letter has been received from the ... to the ... County Council ... local ... to support the application of the rural council to the Road Board and Local Government Board for a grant of 50 per cent of the total cost of the proposed new road through the Dulais Valley from Ystalyfera to Rhos Common. The total cost of the new road was estimated at £16,000. The county council, it was stated, had approved the plans of the road and had agreed to make a substantial grant towards its maintenance when completed.

Newark T.C.—Asphalting work is to be carried out at the Bar... ... at an estimated cost of £132.

Pembrokeshire C.C.—It is announced that the Road Board have intimated that they are prepared to meet the cost of the construction of two military roads ... at Pembroke Dock, through Pembroke to the Anglo Forts, and the other from Neyland along the north shore of the Haven to Dale.

Ramsbottom U.D.C.—A scheme has been approved for the reconstruction of a portion of Helmshore-road, at an estimated cost of £12,946, towards which the Road Board have sanctioned a grant of £4,315.

St. Columb R.D.C.—A committee has been formed to go into the question of constructing a new road from Wadebridge to Ruthern Bridge.

Shropshire C.C.—It has been agreed to pay the roadmen's wages weekly instead of fortnightly as hitherto. The Roads Committee reported that arrangements had been made for the carrying out of road improvement schemes and other works with the object of providing labour in the event of distress occurring through lack of employment owing to the war.

Stanley U.D.C.—A resolution has been adopted in favour of the construction of a new road to Newcastle, and it has been agreed to approach the Tanfield Urban District Council with respect to the scheme.

Warrington T.C.—It has been decided to proceed with the proposed improvement at Market-gate, at an estimated cost of £30,000.

Wortley R.D.C.—The surveyor of highways, Mr. F. A. Crawshaw, has prepared estimates of the cost of thirteen suggested highway improvements, which he has forwarded to the county council for submission to the Road Board. The total estimated cost of the schemes is £2,762.

Youghal U.D.C.—The council have approved the scheme of road improvement at Clifton, at an estimated cost of £3,000, and have decided to apply to the Road Board and the Cork County Council for grants towards the cost of the works.

SEWERAGE AND SEWAGE DISPOSAL.

Clutton R.D.C.—Sewerage works are to be carried out at Rotcombe, at an estimated cost of £285.

Doncaster R.D.C.—Land has been purchased at Bamborough for the purpose of sewage disposal works.

Gwyrfai R.D.C.—The council have instructed their consulting engineers, Messrs. Berrington, Son & Watney, to prepare a scheme for the sewerage and sewage disposal of Ebenezer and Clwtybont.

Matlock U.D.C.—Some years ago the two Matlock Councils agreed that the larger Matlock should carry out a £40,000 sewerage scheme. The work has progressed considerably, and a few days ago the Matlock Council wrote Matlock Bath notifying that their share of the cost, £10,000, would be due this month. It has now been discovered that the money cannot be claimed until the last payment of the contract has been signed, and this is at least a year off yet. Matlock Bath will not, therefore, pay their £10,000.

Rochford R.D.C.—Application is to be made for a Provisional Order for the promotion of a sewage disposal scheme.

Wakefield T.C.—An electrically-driven crane is to be installed at the sewage disposal works for the removal of sludge from the detritus tanks.

Walsall R.D.C.—The council have granted permission to their engineer and surveyor, Mr. W. P. Young, to undertake consulting work on sewerage and sewage disposal outside the council's area.

WATER, GAS, AND ELECTRICITY.

Aberdeenshire C.C.—It is proposed by the Deer District Committee to carry out improvements of the New Pitsligo water supply, at an estimated cost of £1,650.

Dumbartonshire C.C.—The Eastern District Committee have adopted a scheme of water supply for Cumbermauld and Kirkintilloch.

Gwyrfai R.D.C.—The council have under consideration a report prepared by Messrs. Berrington, Son & Watney, of Wolverhampton and Westminster, dealing with the proposed water supply scheme for the villages of Ebenezer and Clwtybont.

Northwich R.D.C.—The surveyor, Mr. J. Brooke, has prepared a scheme for a water supply for Barnton and other districts, at an estimated cost of £29,346.

Sedgley U.D.C.—After the payment of all liabilities there remained a nett profit from the gas undertaking ... the last financial year of £1,058.

Spalding R.D.C.—The Local Government Board have intimated to the council that they will be prepared to sanction a loan for experimental boring at Deeping St. Nicholas.

MISCELLANEOUS.

Battle R.D.C.—It has been agreed to accept the tender of Messrs. Tills, Limited, of High-street, Battle, to supply "best bass" brooms for scavenging at 32s. 3d. per dozen. The tender was the highest of three, but was accepted as the quality was better than the other brooms tendered for.

Swanage U.D.C.—Regarding the tenders for the new carts, the surveyor, Mr. W. H. Pearce, reported that he had ascertained that the work could not be carried out locally, and it was decided to ask the Bristol Wagon Company to furnish a specification and quote a price.

PERSONAL.

Mr. B. A. Miller, surveyor to the Seaford Urban District Council, has been voted £50 for extra services in connection with the sewerage scheme.

Mr. Thomas Moulding, city engineer and surveyor of Exeter, has been elected a Fellow, and Mr. William J. Bidgood, Public Works Department, Shanghai, China, a member of the Royal Sanitary Institute.

Mr. K. G. Foster, assistant to Mr. Wilfrid J. Goode, engineer and surveyor to the Buckfastleigh Urban District Council, has been appointed assistant engineer and surveyor to the Chelmsford Rural District Council.

Mr. William Owen Jones, Aelybryn, Wrexham, has been appointed assistant county surveyor (roads and bridges department) for East Denbighshire. Mr. W. O. Jones served his articles for three years with the borough surveyor of Wrexham, Mr. John England, and was for some time engaged on the permanent staff of the borough. He was for two years in the Inland Revenue Office, Valuation Department, as surveyor and assistant valuer, and for the past two years has been assistant to the Eastern Division county surveyor.

Prof. W. G. Fearnsides, M.A., Sorby Professor of Geology at the University of Sheffield, was last week presented with the Gold Medal of the Surveyors' Institution for the paper entitled "The Part Played by Water in Macadam Road Construction," which he read at a meeting of the institution on November 24, 1913 [THE SURVEYOR, November 28th and December 19, 1913]. In making the award, said the president, in presenting the medal, the council had taken into consideration the scientific nature of the paper, as well as its practicability. The earlier part of it was full of scientific thought and knowledge, and the latter part dealt with the practical application of those principles. In returning thanks, Prof. Fearnsides said the kind reception given to his paper had been a great encouragement to him to pursue the work he had undertaken in connection with the investigation of the scientific and chemical problems presented in road making, and he was sure the honour they had done him that evening would urge him on to ... greater efforts in the same direction.

Local Loans in War Time. [illegible]

FOR OTHER ADVERTISEMENTS

See End of Paper.

SURVEYING ASSISTANT [illegible] Wanted, temporarily, in an Urban Council Surveyor's Office, [illegible] experienced in the preparation of schemes for Main Sewerage and Sewage Disposal, details, quantities and estimates; must be quick and accurate surveyor and leveller, and good draughtsman. Applications to state age, particulars of training and experience, and [illegible] recent testimonials.—Box 1,487, office of THE SURVEYOR, 21 Bride [illegible] E.C. (2,095)

SURVEYING ASSISTANT (20), Intermediate F.S.I., desires appointment in Municipal Office. Three years' articles; practical experience in Building Construction, Surveying, Levelling, and [illegible] Moderate salary.—Box 1,488, THE SURVEYOR, 21 Bride [illegible] E.C. (2,100)

THE RURAL DISTRICT COUNCIL OF GODSTONE.

HIGHWAYS AND BRIDGES DEPARTMENT.

The above Council invite Tenders for Tar-washing certain Highways within their District during the Season of 1915.

Forms of Tender can be obtained from the undersigned upon receipt of a stamped and addressed foolscap envelope.

Tenders must be sealed and marked on the outside "Tender, Tar-washing," and must be delivered to me not later than 12 noon on Friday, the 4th day of December, 1914.

The Council do not bind themselves to accept the lowest or any Tender.

GEO. E. CROWTER,
Engineer and Surveyor

High-street,
Godstone,
Surrey.
November 18, 1914. (2,097)

TOTTENHAM URBAN DISTRICT COUNCIL.

TO CONTRACTORS.

The Council invite Tenders for Making Up Reform-row (Section 1).

The Plans can be seen, and Forms of Tender and other particulars can be obtained, on application to Mr. W. H. Prescott, M.INST.C.E., Town Hall, Tottenham.

The sum of £5 will be charged for the Quantities, which will be returned on receipt of a *bonâ-fide* Tender, accompanied by the Conditions, Specification, and Quantities, otherwise the deposit will be forfeited.

The Contractor will be required to pay all workmen on the Council's work the recognised Trade Union rate of wages. A Schedule of such wages will be inserted in the Contract, and a copy of the Schedule must be exhibited on the Pay Office at the Works.

Canvassing Members of the Council is strictly prohibited, and if any Members, Agents, or Representatives of Firms tendering for this work interview or canvass Members of this Council, Tenders sent in from such Firms will be immediately disqualified.

Sealed Tenders, on the Form supplied, endorsed "Tender for Making Up Reform-row (Section 1)," to be delivered to me by twelve o'clock noon on Tuesday, 1st December, 1914.

No other Form of Tender will be received.

Security will be required for the due performance of the Contract.

The Council will not be bound to accept the lowest or any Tender, nor [illegible] part only of any Tender received.

(By order)
VINCENT A. BALLS.
Acting Clerk of the Council.

Tottenham.
[illegible] (2,099)

INSTITUTION OF MUNICIPAL AND COUNTY ENGINEERS.

President—Mr. J. S. PICKERING, M.INST.C.E., Borough Engineer, Cheltenham.

WEST MIDLAND DISTRICT.

A meeting will be held at Birmingham on Thursday next, November 26th.

AGENDA.

5.30 p.m.—Meet at the Council House, Birmingham, To elect Executive Committee for the ensuing year.

Discussion on paper by Mr. E. J. Goodacre, ASSOC.M.INST.C.E., assistant borough surveyor, Shrewsbury, entitled "Timber and its Relation to the Building By-laws."

F. C. COOK, ASSOC.M.INST.C.E.,
Hon. District Secretary

Municipal Offices,
Nuneaton.

COLE TESTIMONIAL FUND.

It is proposed to close the above fund in time for inserting the names of the subscribers in the December issue of the *Journal*. It is hoped therefore that members who have not already done so will kindly forward their contribution to me at an early date. The suggestion that the subscription should be from 1s. to 5s. was made to enable each individual member to show his appreciation of the great services rendered by our late secretary, Mr. Cole. At present less than half the members have subscribed, but I feel sure that it only needs this reminder to bring in the remainder of the contributions before the appointed close.

J. S. PICKERING,
President.

Municipal Offices,
Cheltenham.

INSTITUTION OF MUNICIPAL ENGINEERS.

President—Mr. HORACE BOOT, M.I.E.E., M.I.MECH.E., Tunbridge Wells and Westminster.

President-Elect—Mr. W. H. MATTHEWS JONES, City Engineer and Surveyor, Chester.

Stores.

HENDON.—November 23rd.—For the supply of a petrol motor combination fire engine, for the urban district council.—Mr. S. S. Grimley, engineer and surveyor, Council Offices.

NOTTINGHAM.—December 3rd—For the supply of cement, blue lias lime, red bricks, blue bricks, timber, earthenware pipes, iron castings, gullies, Yorkshire flags, kerb, granite setts, broken granite, ironstone slag, chippings, river gravel, coal, picks, shovels, scoops, ironmongery, scavenging, and other brushes, disinfectants, refined tar, pitch, and creosote oil, for the corporation.—Mr. Arthur Brown, city engineer, Guildhall.

DURHAM.—December 12th.—For the supply of cast-iron direction posts, for the county council.—County Surveyor, Shire Hall, Durham.

TENDERS FOR MUNICIPAL WORKS OR SUPPLIES.

The Editor invites the co-operation of SURVEYOR *readers with a view to making the information given under this head as complete and accurate as possible.*

* Accepted. † Recommended for acceptance
‡ Provisionally accepted

ASHTON-UNDER-LYNE.—For the extension of the sewage disposal works, for the corporation.—Mr. J. Rowbottom, engineer.

Sewage Disposal Works Reconstruction.—T. Dean & Co., Ashton-under-Lyne.
Sewerage Ironwork, Valves and Penstocks.—J. Blakeborough & Co., Brighouse.

AUCKLAND.—For providing and laying down glazed earthenware pipe sewer and manholes, for the rural district council.—Mr. C. Heslop, sanitary surveyor.

T. Manners, Bishop Auckland	£209
R. Wilson, Barnard Castle	207
Walton Brothers, Crook	197

BIRMINGHAM.—For the erection of a school, for the Education Committee:—

J. Harper & Sons, Blackheath.
T. Elvins & Sons, Birmingham.
H. H. Crump, Birmingham.
W. Moss & Sons, Limited, Loughborough, Leicestershire.
F. H. Smith, Birmingham.
J. Dodson & Sons, Blackheath.
W. Lee & Sons, Aston Manors, Limited, Birmingham.
J. Holyoak & Son, Erdington.
J. A. Turton, Birmingham.
W. & J. Webb, Birmingham.

BISHOP'S STORTFORD.—Accepted for the supply during the year of broken granite and granite chippings, for the urban district council.—Mr. R. S. Scott, engineer and surveyor.

Cliffe Hill Granite Company, Markfield, near Leicester.—1½-in. broken granite, 12s. 3d.; ½-in. granite chippings, 10s. 1d.; ⅜-in. granite chippings, 10s. 4d. per ton.

EASTBOURNE.—For private improvement works, for the corporation.—Mr. A. E. Prescott, borough surveyor.

M. Hookham, Eastbourne.—Pevensey-road and Cavendish-place, £23. Willowfield-road and East-street schools, £58. Willowfield-road, East-street, and East-street schools, £70.
A. V. McCann, Eastbourne.—£25, £47, and £73.

HERTS.—For the erection of Barnet Petty Sessional Court, for the county council.—Mr. J. S. Killick, county surveyor.

Brightman & Son, Watford	£5,635
Blow & Peters, St. Albans	5,349
Ekins & Co., Limited, Hertford	5,110
Miskin & Sons, St. Albans	5,077
E. C. Jarvis, Harpenden	5,020
Salisbury & Son, Harpenden*	4,799

HERTS.—For the erection of Stevenage Petty Sessional Court. Mr. J. S. Killick, county surveyor:—

Greenwood & Sons, Stevenage, Bishop's Stortford	£8,293
Lawrence & Patrick, Letchworth	8,258
Gerrard & Son, Hertford	8,048
Latter & Co., Hitchin	8,000
Johnson & Perkins, Ashwell	7,997
Hayes & Co., Limited, Stortford	7,950
Saunders & Son, Hertford	6,927
Prestage & Son, Watford	6,847
Mead & Son, St. Albans	6,184
F. Newton, Hitchin * ..	6,130

HERTS.—For the erection of new education offices, Hertford. Mr. J. S. Killick, county surveyor:—

G. H. Greenwood, Mount Hawtree	£5,113
W. J. Prestage, Bramfield	4,955
Dove & Son, Hertford	4,389
Gerrard & Son, Hertford	4,380
Latter & Co., Hitchin	4,300
Johnson & Perkins, Ashwell	4,000
Mead & Son, St. Albans	3,995
Hayes & Co., Limited, Watford	3,977
Saunders & Son, Hertford	3,850
Latter & Co., Limited, Hertford	3,837
Saunders & Son, Hertford	3,817
F. Newton, Hitchin * ..	3,801
Hayward & Co., Hertford (for the provision of portable school buildings). Mr. C. J. Parker, borough surveyor:—	
J. Lowe, Stortford	£1,450
C. H. Parkinson, Sawbridgeworth	1,300

HERTS.—For the erection of Letchworth Police Station. Mr. J. S. Killick, county surveyor:—

Latter & Co., Hitchin	£4,396
Dodkin & Turner, Letchworth	4,196
Gerrard & Son, Hertford	4,056
Bruckman & Sons, Watford	3,911
Saunders & Son, Hertford	3,850
First Garden City, Limited, Letchworth	3,781
Souster & Son, Letchworth *	3,646

HOLLYWOOD (Belfast).—For erection of premises for the urban district council:—

J. Preston & Son, Newtownards	£—
R. & J. Pearce, Belfast ..	176
[illegible]	148
J. Ross & Son, Belfast ..	130
A. H. McCracken, Belfast	118
S. R. Boyd, Belfast	110
Woodburn, Limited, Belfast	110

[illegible] for the construction of [illegible] for the corporation. Mr. W. T. Lancaster, city engineer:—

W. Sowerby, Bramley, Leeds, £[illegible]

PRESTON.—For the erection of a cottage, for the Joint Hospital District.—Mr. W. D. T. Munford, architect:—

J. Key & Son, Ingol-lane, near Preston	£467
J. Cottam, Preston	443
Rimmer & Walker, Preston	439
J. Cartwell & Sons, Limited, Preston	425
[illegible]	[illegible]

PAWMARSH.—Accepted for making up a street, for the urban district council.—Mr. J. A. Tonge, surveyor:—Lane Brothers, Mansfield, £183.

MEETINGS.

Secretaries and others will oblige by sending early notice of dates of forthcoming meetings.

NOVEMBER.

20.—Institution of Mechanical Engineers: Mr. G. Gerald Stoney, [illegible] on the Effect of Vacuum on Steam Turbines. 7 p.m.

26.—Institution of Municipal and County Engineers: West Midland District Meeting at Birmingham.

27.—Junior Institution of Engineers: Mr. C. F. Lyall on A Model Drawing Office System. 20 Victoria-street, S.W. 8 p.m.

28.—Institution of Municipal Engineers: Annual General Meeting in London.

DECEMBER.

[illegible] Institution of Municipal and County Engineers: West Midland District Meeting at Birmingham.

APPOINTMENTS OPEN.

OFFICIAL AND SIMILAR ADVERTISEMENTS RECEIVED UP TO 4.30 P.M. ON THURSDAYS WILL BE INSERTED IN THE FOLLOWING DAY'S ISSUE, *but these responsible for their despatch are recommended to arrange that they shall reach* THE SURVEYOR *office by noon on* WEDNESDAYS *to ensure their inclusion in the weekly list of appointments. Such advertisements may, in cases of emergency only, be telephoned (City No. 1926) subject to later confirmation by letter.*

TEMPORARY ASSISTANTS.

[illegible] Temporary Assistants [illegible] at Northampton, required by Northampton Corporation, principally in the construction of Bridges and Private Street Work. [illegible] Duties. Salary £120 per annum. Box 1,486, office of THE SURVEYOR, 12 Bream's Buildings, E.C. [illegible]

And Municipal and County Engineer.

Vol. XLVI. NOVEMBER 27, 1914. No. 1,193.

Minutes of Proceedings.

The Science of Water Purification.

Very few people have any proper idea of the importance of the great advances made in the science of water purification during the last few years. Water purification is generally regarded as the means whereby the good quality of drinking water may be ensured. For instance, organic and inorganic matters in suspension may be removed by filtration, or even bacterial impurities may be got rid of; or, again, hard water may be softened. However, the average layman will generally state his preference for obtaining a water pure at its source, and if he can only find some obliging chemist or medical officer who will tell him that this is so he will give his support whole-heartedly to the proposal which has for its object the attainment of this ideal. To such a person, and, indeed, to all water engineers or others interested in the subject of water supplies, we commend a recently published book by Dr. Samuel Rideal and Dr. Eric K. Rideal dealing with "Water Supplies: Their Purification, Filtration and Sterilisation."* It will be seen that the whole question of water supply is affected by the scientific progress made within a few years. Water differs in quality in every case; the character of the ground in which it falls, the earth or rock through which it percolates, and the channels through which it flows either above or below ground, and even the quality of the atmosphere through which the rain falls, each and all tend to affect the quality of water. Then there are the effects of animal and vegetable life present on the surface of the earth, in lakes and in rivers, to be taken into consideration. The result is that water to all appearance of the purest quality may be of a character to corrode mains, clog them with deposits of lime or other material, cause lead poisoning, and produce animal or vegetable growths inside pipes, sometimes resulting in unpleasant tastes and odours.

To enumerate the possibilities of trouble due to water is outside the scope of the present note, but in order to indicate them we have given the above instances, to which may be added the iron rust trouble, or red water plague, as it is called in America. Even the waters obtained from the purest upland sources may need treatment. Reference to the troubles experienced with some of our greatest supplies of this character prove the point. Most waters attack iron pipes more or less rapidly. It does not require any great mental effort to grasp the fact that it is worth while to treat the water before use in order to remove the corrosive qualities. It is not only very desirable, but it is very economical to do so. Waters derived from moorlands are often plumbo-solvent; common sense tells us first that such waters should be carefully examined, and next that they should be treated so as to get rid of the plumbo-solvent quality. Obstructions caused by incrustations in mains are entirely due to the quality of the water; they may be animal, vegetable, or mineral, but they may be prevented by suitable treatment. If such treatment is not given the mains lose their carrying capacity, and much greater expense is ultimately caused than could possibly be incurred by the simple treatment needed to prevent the possibility of incrustation.

Much more might be said to prove the value and importance of water treatment. Water should be regarded as a manufactured product. If it possesses any harmful quality, this can certainly be removed. If pipes corrode, do not blame the pipes, which are probably good—blame the water. If boilers become coated with scale, if there is trouble with rust, if the bacterial quality of the water is below the highest standard, it should be remembered that all these things are curable; moreover, it should be understood that there is probably no water drawn from a natural source which is altogether free from qualities which cause actual financial loss, and that it will generally prove to be sound finance to deal with the matter scientifically. In these days it is clearly folly and extravagance to use water which possesses any undesirable quality. A study of the book referred to above will show that where such troubles are dealt with scientifically it is always possible to remove them. The new publication will certainly take its place among the best works of reference.

The Concrete Institute.

The members of the Concrete Institute are to be congratulated on having as their new president so experienced an engineer as Prof. Henry Adams, whose capacity to deal with a wide range of subjects affecting the interests of structural engineers was amply demonstrated in the inaugural address which he delivered on Thursday of last week. In the course of his remarks on the domestic affairs of the institute Prof. Adams drew attention to the inauguration of a series of informal meetings for the junior members, who are perhaps too diffident to join in the discussions at the ordinary meetings—an idea which might well be copied or adapted by some other societies. Turning to topics of wider interest, Prof. Adams first discussed the official "Regulations for the Use of Reinforced Concrete" in London, and criticised the inclusion therein of specific formulæ by which the desired results are to be obtained. He spoke next of the value of the lessons which may be learned by an intelligent study of failures; and although the "Investigation Committee" appointed by the institute has not hitherto been able to do much useful work, it is to be hoped that the new president's wise words may lead members to supply in confidence details of failures, so that the engineers of the future may profit by the experience of the past. The important work of standardisation has been carried on by the

institute in two directions namely, by the appointment of a Joint Committee with the Quantity Surveyors' Association for preparing a standard system of measurement, and by the preparation of a standard specification for reinforced concrete—a task which is nearing completion.

It was perhaps only to be expected that the address under notice should contain a reference to the usual method followed for obtaining designs for the structural parts of a reinforced concrete building. The common system of competitive design is certainly open to objection, and we agree with Prof. Adams' view that collaboration between the architect and the structural engineer is the preferable course, so that a single design may be prepared upon which contractors may tender on a common basis. This raises the question as to what are the real functions of the "structural engineer." The reply to this is that he is concerned with the design of those parts of a building or other structure, of reinforced concrete or any other material, the chief object of which is stability, and that in regard to these matters he is in the nature of a consultant specialist. The last matter to which we desire to refer is the reactionary policy pursued by the Local Government Board in regard to the period for which they are prepared to sanction loans for works of reinforced concrete. The present periods allowed are so short that, although the actual cost of reinforced concrete is very much cheaper than that of mass concrete for the same work, the annual sum for the repayment of loan and interest is considerably greater. This fact, naturally, has a tremendous retarding effect upon the progress of reinforced concrete in this country, and it is to be hoped that the board may soon be induced to proceed on more enlightened and modern lines.

Municipal Progress in Calcutta.

We learn from a summary of the report of the municipal administration of Calcutta for the year 1913-14, which appears in *Indian Engineering*, that the change of the capital of India has not had the disastrous effect on municipal finance that was expected in some quarters. On the contrary, prosperity in Calcutta "has been abounding." The receipts of the corporation are stated to be large, and the credit balance considerable—it was much higher than for the four previous years—while it is also placed on record that no loans were raised during the year, a fact at once gratifying and suggestive, provided always that nothing has been left undone which ought to have been done. That this latter condition would seem to have been fulfilled is to be surmised from the statement that the municipality had embarked "on a most liberal scheme of improvements." In the surveyor's department, writes our contemporary, projects chiefly relating to street improvements were drawn up, aggregating in value over £1,600,000. The operations included land acquisitions of considerable value, the most important being in connection with the proposed new municipal market, the Kalighat improvement scheme, and the scheme for widening and improving Ballygunge circular road. The removal of huts has been effected upon an extensive scale, spaces cleared between huts, passages opened, roads and surface drainage constructed, while other works have comprised sewering, kerbing and channelling, the provision of connected privies and common latrines, and the construction of three new bathing platforms. Many of these works, of course, belong to the ordinary activities of municipal administration, but collectively they would appear to form a desirable and necessary chapter in the historical progress of Calcutta, and as such are welcomed and appreciated.

It appears that the water supply of the city has been the subject of criticism, but this can hardly have been directed against the volume of water which is available. This can hardly be said to be other than liberal, if not extravagant. The inhabitants are stated to be consuming 32·8 gallons of filtered water, and 25·4 gallons of unfiltered water per head per day, a total of a little under 60 gallons of pumped water. It is suggested that a good deal of water is wasted because it is not charged for direct; but, however this may be, it is to be accepted as a good sign that the municipality can afford to provide water in such abundance without feeling the pinch as others might in like circumstances. Improved schemes for sewage treatment and lighting are also dealt with in the report, and *Indian Engineering*, not without sufficient reason, draws the conclusion from the contents of this document that there has been a remarkable awakening in the Calcutta Municipality, thanks to "an honest intention to progress by Western methods."

* * *

Fire Prevention Committee and the War.

Like many other technical and scientific institutions, the British Fire Prevention Committee has been largely engaged during the past three months on work connected with the war emergency. In the first place, its well-known series of "Fire Warnings" has been extended to meet the special circumstances of the present time, and the distribution, at the request of the authorities, of one "Warning," dealing with the necessary fire precautions in military hospitals, alone exceeds 10,000 up to the present time. Abbreviated French and Flemish translations are provided in the form of short notices for Belgian wounded. In order to meet the fire danger resultant from the great influx of refugees, many of whom were not conversant either with the English open fire, gas lighting, or electricity, a special "Warning" was issued for refugee homes and hostels, and this was also published in French and Flemish. Here, again, considerable issues are being made on the requirements of the authorities—one public department absorbing no fewer than 5,000 copies. In all the committee's "Warnings" the results of the committee's experience and experiments have been embodied in concise language, and should be of infinite benefit to the many users.

The British Fire Prevention Committee, having a number of distinguished surveyors among its membership and subscribers, also organised a special fire survey force, which is doing a considerable amount of survey work in connection with Government establishments, and particularly in connection with hospitals for the wounded. The force comprises some seventy fire surveyors, and it is interesting to note that the two seniors of the fire surveyors are Mr. Leslie Vigers, past-president of the Surveyor's Institution, and Mr. Geo. T. Bullock, past-president of the Junior Institution of Engineers. Further, in order to meet the emergency of the depletion of actual fire brigade and watching staffs, a special fire service was formed, with the Earl of Londesborough as honorary commandant. This comprises 300 fire brigade officers, patrolmen and firemen, divided into sections available for mobilisation at forty-eight hours' notice, and some of the sections can be equipped with steam fire engines lent by large estate owners. Besides this, the committee has also formed a technical inquiry office, to which the Government departments, local authorities, and other corporations bring many questions and inquiries to be dealt with, and by a system of decentralisation most of these technical inquiries can be dealt with in forty-eight hours. Since the outbreak of war four "Red Books" embodying the results of tests have been issued, and three further ones are in the press. It will thus be seen that the committee is devoting the results of its experience very largely to national

Improved Horseshoes.

able to withstand the peculiar destructive effects of the resilient pneumatic tyre, but must at the duction of dust which will prove a nuisance to other users of the road and the occupants of neighbouring houses and shops. Considerable success in achieving these results has been attained in country districts by the employment of a tarry, bituminous, or other similar material in the construction of macadam roads. The success of this type of surface, however, depends largely upon its power to resist the penetration of water, and in order that this power may be retained it is important that the surface shall remain smooth and unbroken. This fact has hitherto placed the road engineer in a dilemma. Either the surface remains smooth, in which case horses have great difficulty in retaining their foothold, or calkins or other projections are fitted into the shoes of the horses, which damage the road surfaces and render them no longer waterproof. Realising these facts, the Roads Improvement Association, which exists to promote the improvement of roads to the satisfaction of all classes of traffic and to assist traffic to adapt itself to the new conditions, recently organised a competition for a new or improved type of horseshoe. The *personnel* of the Committee of Judges was such as to inspire the greatest confidence, and over 880 entries were received. The judges' report will be found in another column, and although on the whole the competition may be accounted a success, it is worthy of note that no shoe or device entered was of sufficient merit to warrant their awarding the first prize of £100. Moreover, of the three premiums awarded, the report states that neither of the first two is based upon any new idea, the appliance in each case consisting of an improved method of adapting an old device. It is satisfactory to observe, however, that, although entries were received from ten countries, all of the awards go to English firms, who are to be congratulated on their success. The task of the judges has not been a light one, as since the beginning of the year they have been engaged in examining and testing in a practical manner the various devices submitted.

* * *

By-laws and Timber.

The value of a paper which was read yesterday before the Institution of Municipal and County Engineers at Birmingham by Mr. E. J. Goodacre, the assistant borough surveyor of Shrewsbury, was enhanced by reason of the fact that the author took a narrow subject and dealt with it thoroughly. Although many new building materials have come into use in recent years, there is as yet little likelihood of timber being superseded, and the question of its relation to the building by-laws is one of considerable importance. Mr. Goodacre's criticism was of two kinds. In the first place, he brought a very keen and practical observation to bear upon the actual provisions of the by-laws, and in the second place he called attention to some notable omissions. Perhaps the most important part of the paper was that which dealt with the prevalence of dry rot. Mr. Goodacre has paid a good deal of personal attention to this subject, and the account he gave of the experiments which he has recently carried out was of much interest. Moreover, he appears to have established his proposition that the provisions of the by-laws as to the ventilation of floors are quite inadequate as an effectual preventive. Quoting from a circular issued by the Board of Agriculture in 1909, he pointed out that the infection of timber with dry rot fungus sometimes takes place in the forest, when felled timber remains stored there for any length of time. Moreover, the fungus is by no means rare in old beams and boards stored in woodyards, and it is mainly from such causes that spores or portions of the spreading mycelium are introduced into buildings by new wood which has become infected. Mr. Goodacre's comment that the information given by the Board of Agriculture does not seem to have impressed their neighbours at the Local Government Board is very apposite, and in this respect the Model By-laws certainly require strengthening. We concur in the hope that in this and other matters the Local Government Board will eventually bring their by-laws more into line with modern opinion and experience.

Improvised Hospitals.

Government for the war " which has been forced upon them " that it is said that for many years past even their elementary schools have been designed with a view to their easy conversion into hospitals. So far as Great Britain is concerned, however, in this, as in so many other respects, more or less hastily devised emergency measures have to take the place of prearranged and well-thought-out schemes. Thus it is that at the present moment large numbers of public and private buildings are being converted as speedily and efficiently as possible into Red Cross hospitals, and in not a few instances the municipal engineer suddenly finds himself at work as a Red Cross architect. We are confident that such services are in every case given in the most willing and ungrudging spirit, and with a view to assisting those who are so engaged we publish in another column an article on the subject from the pen of Mr. G. Bertram Hartfree, the engineer and surveyor to the Alton, Hants, Urban District Council. It must, of course, be fully realised that the precise planning and equipment will depend entirely upon local conditions and the intended use of the hospital. Nevertheless, the very practical hints given by Mr. Hartfree in regard to such matters as establishment accommodation, sanitary fittings, and emergency cooking arrangements can hardly fail to be of value, while the examples of conversion of which illustrations are given will well repay study.

* * *

Sewage Works Managers.

The resignation of Mr. Charles Ball from the honorary secretaryship of the Association of Managers of Sewage Disposal Works, owing to the increasing growth of the work of the association and to the pressure of other duties, is an event which must not be allowed to pass without notice. Mr. Ball has held this office since the inauguration of the association in 1901, and the success of the association is due in no small measure to the zeal and ability with which he has discharged his duties. The annual meeting will be held in London on December 10th, when the opportunity will be taken of presenting the retiring secretary with a tangible evidence of the appreciation of the members in the shape of an illuminated address. Mr. Ball is succeeded by Mr. J. B. Croll, of the Richmond main drainage works, an appointment which will give general satisfaction. It is gratifying, too, to know that the association will not entirely lose the benefit of Mr. Ball's unique experience of their work, as he has consented to continue to deal with its financial affairs. Meanwhile, it is announced that, in view of the present disturbed state of public affairs, the annual dinner of the association will not be held this year.

Timber and its Relation to the Building By-Laws.*

By E. J. GOODACRE, [illegible], Assistant Borough Surveyor, Shrewsbury.

Timber, the first and foremost building material used in the prehistoric dwellings of our ancestors, is still a valuable commodity to the engineer and builder. Although the progress of building science has brought new constructive materials into vogue, wood continues to hold a prominent position in the engineering and building world.

The author has always been very much surprised at the sparse treatment that timber receives in the by-laws adopted by urban authorities, and it is proposed in this paper to briefly review the different clauses appertaining to this material, criticising and formulating suggestions for discussion, with the hope of exchanging ideas on the subject to mutual advantage, and thus strengthening surveyors in the exacting and responsible duty of ensuring the public safe and hygienic dwellings. Many of our largest towns, by means of local Acts, have more powers in this respect than small local authorities, and they have consequently framed stringent by-laws accordingly; but surely the homes of our citizens in small towns and villages need similar protective powers under the Model By-laws.

The most recent draft urban Model By-laws have been taken as the basis of this criticism.

INADEQUACY OF BY-LAWS.

Bearing of Wood Bressummer.—By-law 34 states: "Every person who shall erect a new building shall cause every bressummer to be borne by a sufficient template of stone, iron, terra-cotta, or vitrified stoneware of the full breadth of the bressummer, and to have a bearing in the direction of its length of 4 in. at least in each end."

The latter part of this by-law, quite sound in its intention, has to some extent been defeated by the wiles of the jerry-builder, in his policy of cutting down expense and timber at the same time, by means of the common practice of cutting the deals forming the bressummer on the splay. The bressummer certainly has a bearing of 4 in. in the direction of its length, but not in the direction of its depth. Floor joists are similarly treated in this objectionable manner, and the by-laws should receive amendment to enable this to be stopped.

Timber Fixed near Flues.—By-law 47 states: "A person who shall erect a new building shall not place any timber or woodwork—

(*a*) In any wall or chimney breast of such a building nearer than 9 in. to the inside of any flue or chimney opening;

(*b*) Under any chimney opening of such building within 10 in. from the upper surface of the hearth thereof. A person who shall erect a new building shall not drive any wooden plug into any wall or chimney breast of such building nearer than 6 in. to the inside of any flue or chimney opening."

This by-law, perhaps generally imagined to be not of great import, is one of the building edicts which is contravened more than any other, and, in fact, is one which requires almost constant supervision to enforce it.

In a large town, or, in fact, any town where the building trade is brisk, it would require a small army of building inspectors to watch the speculative builder, or there will be, most probably, a breach of this by-law in the fixing of skirtings, picture rails, or angle beads to chimney breasts. It is, no doubt, an arbitrary point as to which method is the best to fix these mouldings without using wooden plugs in the "danger zone" of the flues.

It is noticeable that in many of the by-laws the remedy is specified to "what shall not be done," and in this case, where some solution would be of value, none is given.

Lead plugs and breeze bricks are methods sometimes adopted, but lead has been known to melt and its object thus defeated; breeze bricks are almost certain to be in the wrong place, or cannot be found by the carpenter when he comes on the scene after the walls are plastered.

The best solution to the difficulty is, undoubtedly, the use of fireclay piping at least 1 in. in thickness in all flues. Although slightly more costly, it would save the cost of parging the flues—a constant source of worry to the inspector—and all risk of firing wooden fixings would be reduced to a minimum, and incidentally there would be fewer smoky chimneys.

Ventilation of Floors.—By-law 55 states: "Every person who shall erect a new domestic building shall so construct every room which shall be situated in the lowest story of such building, and shall be provided with a boarded floor, that there shall be, for the purpose of ventilation between the underside of every joist on which such floor may be laid and the upper surface of the asphalt or concrete with which, in pursuance of the by-law in that behalf, the ground surface or site of such building may be covered, a clear space of 3 in. at the least in every part, and he shall cause such space to be thoroughly ventilated by means of suitable and sufficient air bricks, or by some other effectual method.

"Provided that the foregoing requirement shall not apply in the case of a room provided with a solid floor composed of boards, planks or wood blocks, laid or bedded directly upon concrete or other similar dry and impervious foundation."

The ravages of dry rot in floor timbers are well known to every municipal engineer, and this by-law to some extent safeguards against this virulent disease.

The author has paid a good deal of attention to dry rot, and has recently carried out several interesting experiments in order to glean information on this subject.

Small pieces of well-seasoned red deal, pitch-pine, oak, teak and mahogany were inoculated with the disease, and the specimens placed in a dark chamber with a congenial, warm, stagnant atmosphere.

The red deal, as might be supposed, was the first to show signs of germination, and in three days a white mould broke out in round patches, especially at the exposed end of the piece, looking like cotton-wool. This outgrowth became more dense, and gradually evolved into a dark-brown snuff-like powder.

Teak and mahogany showed similar signs, but in a lesser degree.

Oak showed only the faintest signs of susceptibility to the attack at the outset.

Pitch-pine warded off germination for a considerably longer period, possibly owing to the resinous nature of its fibres.

The foregoing specimens were well seasoned, but still they were not immune from attack in congenial surroundings, and this is important.

In comparison with the above results, a piece of unseasoned red deal which already showed the first signs of dry rot—viz., reddish-brown stains and small rustlike patches—was submitted to a similar experiment, and, needless to say, the *Merulius lachrymans* developed very quickly. In the first few days the deal was permeated with the growth. The wood at first became discoloured to a dark-brown colour; it then swelled as the cell walls absorbed moisture in the direction of the fibres. It afterwards gave up this moisture, and eventually "charred." It became lighter in weight, and crumbled up into a brown powder when probed with a knife.

It is thus evident how timbers infected with dry rot lose all their strength and become unsafe, and it is only to be expected to find a by-law dealing with this matter. But does this by-law go far enough? Many cases, no doubt, will occur to all where dry rot has shown itself, even though the by-law has been literally observed.

In fact, the Board of Agriculture and Fisheries, referring to the increasing prevalence of the disease, drew up an official leaflet in 1909, of which the following is an extract: "Infection with dry rot fungus sometimes takes place in the forest, when felled timber remains stored there for some time.

"The first evidence of such infection is indicated by the presence of red stripes in the sawn wood. If such wood is thoroughly seasoned, the mycelium present in the red wood is killed. If the seasoning is neglected or imperfectly done, the mycelium, which

* Paper read at a meeting of the West Midland District of the Institution of Municipal and County Engineers at Birmingham yesterday.

possesses the power of creating its latent condition [illegible] these circumstances active growth when the wood is used in any part of a building where it is exposed to dampness and also in some cases to an [illegible] the ends of joists are built into a wall.

Under such circumstances dry rot eventually appears.

"On the other hand, the fungus is by no means rare in old beams, and boards stored in wood yards, &c., and it is mainly from such causes that spores or portions of the spreading mycelium are introduced into buildings by new wood which has become infected.

"Spores are diffused by currents of air, or by rats, [illegible] and insects.

"The mycelium can extend over stones and other such substances."

The author has recently inspected a very bad case of dry rot, in which the mycelium has spread over glass and along a wall to a door casing, which had become so decayed that the hinges had fallen out. . . .

It is quite evident that the information given by the Board of Agriculture has not vividly impressed their neighbours at the Local Government Board offices, as there has been no amendment in the by-law for the last twenty years or so. Possibly it is thought that the by-law quoted is sufficient, and that the person in charge of the administration of the by-laws is a sufficient "champion to fight the "rampant enemy." If such is the case, it will be necessary for the municipal engineer to bring to his aid "the unwritten law"—bluff—to bear upon the builders, if he is to ensure the houses built under his supervision being free from dry rot and remaining so.

The following points are suggested as essential to this end, and probably others will be forthcoming in the course of the discussion.

The timber must be well seasoned, and must be kept dry. The dampcourse to external walls and sleeper walls must be absolutely impervious. The site should be covered with at least 4 in. of cement concrete, consisting of 1 part of Portland cement, 1 part of sand, and 4 parts of clean broken brick, granite, or ballast.

Particular stress is laid upon this, as Model By-laws use the rather elastic term "good cement concrete," and the author has heard the speculative builder argue that this is satisfied with concrete made something like the following: "One bag of cement to a cartload of dirty engine ashes." Of course, this is absolutely useless.

Ammoniacal exhalations generated from vegetable soil are favourable to the disease spores, and therefore all soil should be entirely removed from underneath all floors.

The house should be well dried before the floors are laid, and the floor boards should on no account be laid in a wet state.

The ventilation under floors should be most efficient. Ventilating air bricks in the external wall are not sufficient, but should be supplemented by air drains under all adjacent solid floors. Even then it is very doubtful whether ventilation actually exists, and the only remedy appears to have an air flue from the under floor space carried up with the smoke flue of the room.

Chips of wood left by the carpenters, lying about under the floors, are frequently the origin of an attack of dry rot in floors, and they should therefore be cleared up. Even with concrete under floors this is essential, as the shavings probably become infected with dry rot before the concrete is dry.

The ends of the joists should have a clear air-space around and should not be bedded in lime mortar, for the moisture of the mortar is absorbed by capillary attraction into the joist; moreover, quicklime, unless kept quite dry, has an injurious effect on wood, and it is always present to some extent in fresh mortar.

The skirting should be backed with adamant plaster, and should not be fixed until the wall and plaster are quite dry.

Windows to Open.—By-law 56 states: "Every person who shall erect a new building shall construct in every habitable room of such building one window at the least opening directly into the external air, and he shall cause the total area of such window, or if there be more than one, of the several windows, clear of the sash frames, to be equal at the least to one-tenth of the floor area of such room.

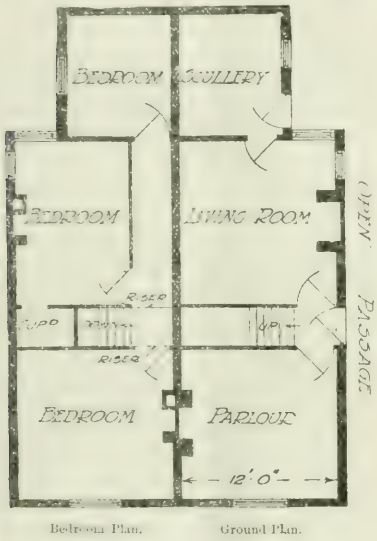
"Such person shall also construct every such window so that one-half at the least may be opened, and so that the opening may extend in every case to the top of the window."

"Habitable room" in this by-law, as in others, is somewhat vague, and the board should have defined it in the interpretation of terms. Apparently, also, one might build a pantry or larder without a window and yet satisfy this by-law.

Another point in this by-law is rather arbitrary—that is, one half may be opened—one half of what? The whole window area or one-twentieth of the floor area? Presumably the latter; but at all events such ambiguity is a constant source of worry to the administrator of the by-laws.

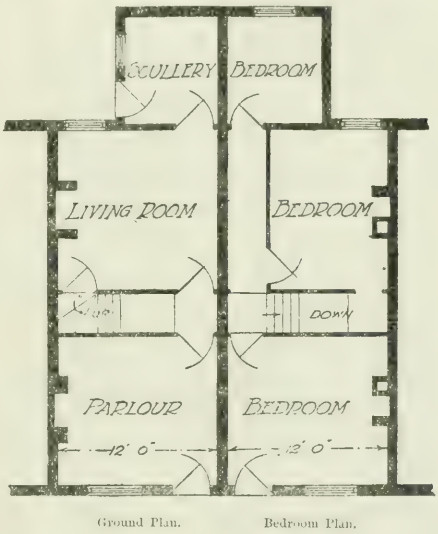
NOTABLE OMISSIONS FROM THE BY-LAWS.

There are several notable omissions from the Draft Model By-laws regarding woodwork. The author, as stated previously, is fully aware that this does not apply to all by-laws adopted by local authorities, but the questions involved are so vital to the safety



Bedroom Plan. Ground Plan.

FIG. 1.



Ground Plan. Bedroom Plan.

FIG. 2.

every local authority.

narrow-fronted semi-detached house, such as Fig. 1.

The author has frequently had occasion to cause the builder to alter the stairs, in order to give a sufficient headroom.

In some cases this has been quite unsafe, and, not having any statutory powers, the only way the surveyor can accomplish this necessary alteration is by tact.

stairs, risers immediately at the threshold of bed-

staircases, especially in the case of stairs approached from the living-room and shut off by a door, as shown in Fig. 2, are a few points for objection.

To meet these objections by-laws should be framed embodying the following points:—

(1) The angle of the string of the stairs should not exceed 45 degrees with the floor. This would approxi-

lecting the nosing.

6 ft. 6 in., measured vertically.

(3) Winders, if absolutely necessary, should be at the bottom of a flight of stairs, and not at the top.

(4) No riser should be permissible immediately under a door.

(5) Every staircase should be provided with a proper banister, handrail or balustrade, of a height of not less than 2 ft. 6 in., measured vertically from each tread, and properly and securely fixed.

(6) The staircase should be properly lighted, and should be not less than 2 ft. 9 in. in width.

Strength of Floor Joists and Roof Timbers.—In the author's opinion no by-laws can be deemed complete unless every surveyor has actual power to regulate the safety of floors and roofs.

Numerous cases will no doubt rise in the minds of council officials of floor joists of unsound timber and doubtful scantling, fixed at excessive centres in houses under their jurisdiction.

There is a difficulty in providing for the many and various cases of public buildings and warehouses, but surely necessary powers might be left to the discretion of the municipal engineer, who is quite competent to deal with such questions; if he is not, then the Local Government Board should sanction the appointment of competent officials, not only to satisfy themselves, but to justify the status of the engineer—*en passant*, a step for which our institution has always striven, and will no doubt always strive, until it is an accomplished fact.

The question, however, of the soundness and scantling of timbers for floors and roofs in domestic buildings is a more definite quantity, and these should be tabulated for various bearings at fixed centres, with strutting at fixed intervals.

The foregoing remarks are the result of the author's personal experience, but are set forth in the hope of creating discussion, in which members of the institution will add their experience in the administration of the by-laws under difficulties undoubtedly existing under present conditions. The present-day agitation for cheap dwellings is, of course, a great factor to be considered; but surely this can and must be effected without sacrificing the safety and hygienic conditions of dwelling-houses. In conclusion, the author is not without hope that, with constant pressure and perseverance, the Local Government Board will eventually bring their by-laws more into line with the trend of opinion and experience of those whose duty it is to administer them.

An Old Controversy Ended.—Last week the seal of the Foleshill Rural District Council was affixed to an agreement with the Warwickshire County Council, the Bulkington Urban District Council, and the Coventry Canal Company in respect of the reconstruction of a dangerous canal bridge on the main road between Bedworth and Bulkington. The work is to cost £1,100 (approximately), and the Foleshill Council agreed to contribute £200 on behalf of Bedworth. The question of this work has been before the local and county authorities for no less than ten years.

HORSESHOE COMPETITION.

JUDGES' AWARDS AND REPORT.

conjunction with the Royal Society for the Prevention of Cruelty to Animals, have now been issued. Although over 850 shoes from all parts of the world were submitted for competition, the judges state that no shoe or device entered was of sufficient merit to warrant them awarding the prize of £100. The judges, however, have granted premiums to three entrants.

Mr. P. B. Gray, of the Gray Horseshoe Pad Company, The Hill, Sutton Coldfield, is awarded £21 for his rubber frog pad. This appliance consists of a rubber pad placed between the heels of the shoe, over the frog, and is held in position by a thin strip of steel let into the foot surface of the shoe at each end. This is not a new idea, but its advantage over other types of pads is that the whole of the sole is left uncovered, whereas in most other cases it is completely covered by rubber or leather. This reduces the amount of material used in the construction of the pad to a minimum, and enables it to be supplied at a low cost compared with other rubber pads. The shoes required for these pads are the ordinary flat pattern, and are made in the usual manner.

A second premium of £15 15s. is awarded to Messrs. Joseph and George Deighton, of Central Shoeing Forge, Harrogate, for their channelled shoe filled with tarred rope. This idea is also by no means new, but the advantage which the entrants claim over other types of shoes is that it can be made quite easily by hand from the bar. The nails go through the rope, this preventing it dropping out; but this method of application may cause injury to the foot, owing to the difficulty of adjusting the pitch of the nail. In previous types of rope shoes the rope had to be fitted after the shoe had been nailed on, and the shoe itself was usually of cast-iron, which prevented satisfactory fitting. The price at which these shoes can be supplied is slightly higher than the ordinary shoe, and its wearing qualities are quite satisfactory. This shoe would have taken a higher position in the opinion of the judges had it not been accompanied by the difficulty of application.

Mr. Thomas Delves, of Harrogate, is awarded £10 10s. for his flat shoe for bringing the horse's frog into action. The judges are of opinion that this was the best shoe of its particular type, and if used on feet with good frogs would bring the frog into action in a suitable manner, and be one of the best means of preventing slipping, and cause the minimum of damage to the roads. This shoe was not practically tested, as the committee were satisfied as to its utility, given a good frog, without a trial.

The competition was opened March, 1913, and closed December 31st last. Entries were received from the United States, Canada, South Africa, Australia, China, Germany, France, Holland, Sweden, and all parts of the United Kingdom. Since the commencement of the year the Judges' Committee have been engaged in examining and testing in a practical manner the various devices submitted. The shoes were tested upon varied types of horses working in different parts of the country, and it is only after very exhaustive experiments that the judges have made their awards as above.

Copies of the judges' awards and report can be obtained from the secretary to the Roads Improvement Association, Mr. Wallace E. Riche, 15 Dartmouth-street, Westminster, London, S.W., price 2d., post free.

The Civic Engineer's Who's Who, compiled by the editor of THE SURVEYOR AND MUNICIPAL AND COUNTY ENGINEER, for a second annual issue is remarkably complete. The biographical matter is full and methodically arranged. The book is published by the St. Bride's Press, Limited.—*Liverpool Courier.*

Coventry Town Planning Scheme.—Coventry City Council have given notice of their intention to apply to the Local Government Board for authority to prepare a town planning scheme, a portion of the land for which is situated in the parish of Foleshill, in the district known as Lythall's-lane, near the London and North-Western Railway.

The Adaptation of Public Buildings as Red Cross Hospitals.

By G. BERTRAM HARTFREE, F.S.I., Engineer and Surveyor to the Alton, Hants, Urban District Council.

Press reports state that for many years German elementary schools have been designed to allow their easy conversion into hospitals. This infers that the nation expected war; but the majority of the British people had not reached such a state of expectation, and consequently have no buildings expressly intended other than for their original purpose. Nevertheless, many buildings can, at comparatively small expense and short notice, be converted into suitable hospitals.

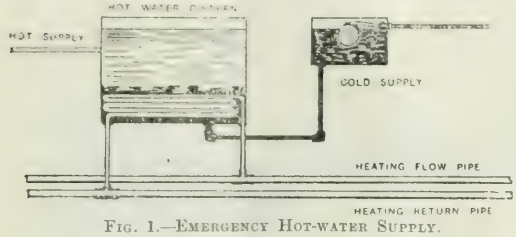


FIG. 1.—EMERGENCY HOT-WATER SUPPLY.

It may be useful at this stage to review the work of the various medical units from the firing line to the hospital at home, whether in large town or village. The rear of the battle line may be taken as consisting of collecting zones in which the wounded are treated by first aid, and removed to the field hospitals, which consist of buildings, tents, or whatever shelter can be obtained. After treatment here they pass through the transmitting areas to a centre for distribution. From this station, by rail or sea, they are conveyed to the general hospitals at base, and in accordance with their condition or the accommodation of the hospitals, they may be subsequently removed to the relief hospitals in the villages or the country towns.

It is here that the services of the municipal engineer may be requisitioned as a Red Cross architect. A minimum floor area of 6 ft. by 8 ft., and an air-space of 500 cub. ft. is advised by several authorities, but whenever possible a minimum of 1,000 cub. ft. should be adopted. Difference of opinion exists as to advantages or otherwise of single large wards as against a number of small rooms. Large halls have the advantage that administration and supervision can be carried out far better, but several small rooms are of advantage for cases that need quiet, or isolation should infectious disease be suspected.

Local conditions and the intended use of the hospital govern the number and sizes of the various establishment rooms, which include the following:—

Commandant's office, nursing superintendent's office, doctor's office, pharmacist's office, quartermaster's store and office, ammunition store, receiving-room, operating theatre, nurses' offices and day-rooms, laundry, mortuary, rooms for staff, kitchen and scullery.

The commandant's office must be in a central position. Should the Red Cross Hospital be administered by the nursing heads of a local hospital, possibly a special room for the nursing superintendent is not imperative, although undoubtedly this is desirable in the interests of systematic administration. The quartermaster's store requires a sufficiency of cupboards and shelves for the reception of new clothing, linen and bandages, and so forth; possibly in a small hospital this department would control the linen intended for laundry or mending, and in such case special and separate provision would be required for both.

In small hospitals resident surgeons or pharmacists would not be required; more probably local

a nursing ward.

The nurses' offices require ample fittings for sanitary purposes, including the supply of hot water, which is often a difficulty met in adapting public buildings, owing to the existing arrangements being inadequate. In emergency I have proposed connections from existing water or steam heating pipes to

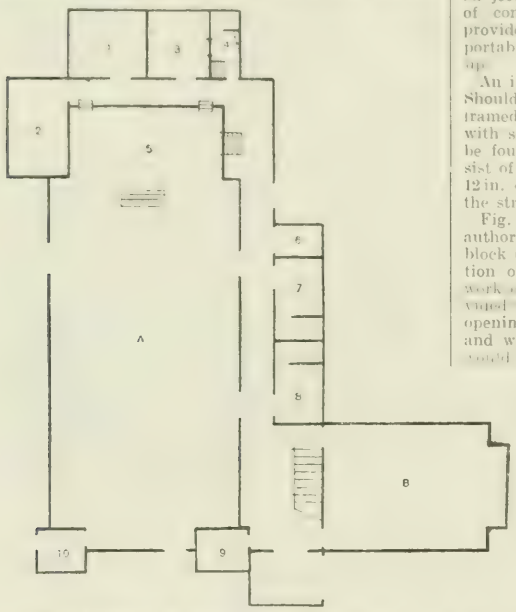

Fig. 3.—Public Building Converted into Hospital.

would be raised in temperature by the heated coil (Fig. 1). Gas geysers are extremely useful for small supplies, as boiling water is obtainable at the shortest notice. Self-contained coppers have the advantage that a large supply of hot water can be maintained, and, in the absence of better arrangements, they

flues into existing chimneys, or direct to the open air.

Among the sanitary fittings hospital sinks are very important; in the absence of the correct pattern a substitute can be made by fitting a deep sink of the scullery type over an ordinary washdown pan.

As a rule, it may be taken that the nurses do not sleep on the premises, and bedrooms need not be specified; but one or more rooms as dining-rooms, duty-rooms, &c., are required, according to the size of the hospital.

In most towns arrangements would be made with local laundries for the washing of linen, but should a laundry be required a separate building is preferable, with, if possible, a chamber that could be used

by obtaining the wheeled portable type that after use

emergency, the following will be found useful: Glazed stoneware channels indoors leading to trapped gullies outside, or lead waste pipes provided with suitable traps, with bell-mouth inlets flush with corridor floors, and discharging over trapped gullies outside. Care is necessary to prevent the bath outlet valve choking after use, and immediately after a discharge of soapy water, a quart of boiling water in which a handful of common washing soda has been dissolved should be poured through to remove any settlement of soap. When the pipe or outlet intended for bath discharge is not easy of access, a connection may be made by a rubber tube, and with care will be found

The cooking department is one of the most important in this work. The advice given by our premier

is equally good when they are wounded, and large kitchens amply supplied with cooking arrangements are imperative. As emergency cookers, gas stoves are exceedingly useful, and have the advantage that, subject to sufficient ventilation to allow the escape of consumed gas, an unlimited number can be provided according to requirements. For hot water, portable coppers or hot-water coils can be fitted up.

An important addition to the kitchen is the larder. Should no room be available, one or more light-framed structures consisting of galvanised-iron roofs, with sides and door covered by perforated zinc, will be found useful. When the whole of the sides consist of perforated zinc, the roof must project at least 12 in. on every side. Ample bracing is required to the structures to prevent upsetting by strong winds.

Fig. 2 shows elementary schools as designed by the author for use as a Red Cross hospital. The lower block (girls and infants) was intended for the reception of thirty-six patients and all administration work except cooking. Ward A, B and C, being provided with a sufficiency of glazed doors and windows opening to the main corridor, were easily controlled, and without this internal lighting the nursing staff

matched partitions the quartermaster's store and bathrooms were erected in the space reserved for children's coats, &c., and washing, the water supply and drainage here being adapted for baths. The infants' lobby was reserved as an ammunition store. No suitable room being obtainable, a temporary building was provided as a receiving block.

The boys' school, which was of a more ancient type, had fortunately recently been altered to meet modern requirements, and the manual instruction rooms were already fitted up for cooking classes, and made a suitable kitchen and scullery. In addition, two wards capable of holding twenty-two beds

fifty-eight beds, with a cubic space of 1,000 ft. per bed.

Fig. 3 shows a public building which possibly was inferior to the schools in respect to lighting and ventilation, but had a decided advantage in respect to administration. The stage, in addition to being fitted up with store cupboards, &c., was an excellent position from which the whole of ward A could be supervised. Two smaller halls, one on the ground floor the other immediately above, were used as smaller wards. The cloak-rooms, call-rooms and dressing-rooms were all used for such purpose that their position and construction made most suitable.

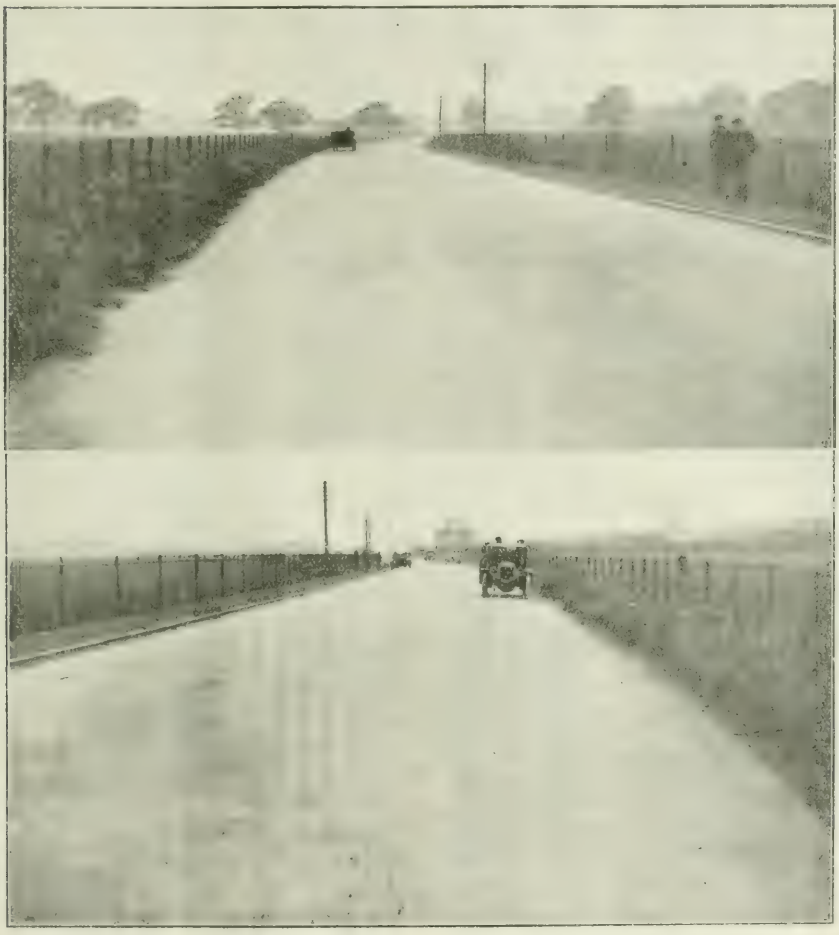
No operating-room was provided for either of the foregoing, a local hospital having lent their theatre to the Red Cross nursing detachment.

For disinfecting purposes, in the absence of any appliance more suitable, the chambers described in a previous article on "Disinfection" could be adapted, and if cases of typhoid occurred, should there be no typhoid incinerator at hand, a tar-boiler would be all-sufficient. The disinfecting properties of tar are well known, and a thorough boiling should sterilise any liquid or semi-liquid infected matter, as, in addition to other properties, the boiling-point of tar is in excess of 212 deg. Fahr., and that alone is claimed to be destructive to micro-organisms.

Improved Road Surfacing in Grangemouth.

By DAVID A. DONALD, C.E., Burgh Engineer.

Prior to 1910 experiments were conducted on the medium and light traffic roads in this burgh with ordinary macadam tar-sprayed; tar-macadam in situ with Aitken's patent sprayer; and tar-macadam on the Gladwell system. Since 1910 the efforts on road improvement have been almost entirely confined to the highways or heavy traffic roads. In March to June of that year that section of the highway approximately 1 mile in length and passing through the summer months. In the winter months the road was comparatively clean, particularly so after a shower of rain, and little or no scraping has been required. In the beginning of this summer (1914), after a life of four years, this section could be said to be in as good condition almost as the day it was laid. In order further to minimise the dust nuisance the surface of this section has been sprayed, partly with tar and partly with Fluxplaite, and the [illegible] affecting



Mexphalte Grouted Roads at Grangemouth.

residential area of the burgh was the subject of further experiment.

This road was divided into four sections, and treated with Rocmac (No. 1 section), double tar-grouting (No. 2 section), ordinary macadam tar-sprayed (No. 3 section), and ordinary macadam (No. 4 section.)

ROCMAC.

The Rocmac section took the form of surfacing recommended by the proprietors of Rocmac—namely, spreading the prepared matrix on the old surface of the road, which had previously been scarified, applying the metal, and rolling until the matrix was forced into the interstices of the metal. During the summer months of 1910 this road was quite as dusty as an ordinary macadam road, but since then there has been a gradual diminution of the dust nuisance in the its primary object, will, I anticipate, add to the life of the road.

The cost of the Rocmac was as undernoted:—

Material.	Quantity per sq. yd.	Price per sq. yd.
2 in. hand-broken metal	[illegible] tons	6·48d.
Limestone chips and dust	[illegible] tons	0·67d.

† Road was bottomed and blinded with ashes six months prior to surfacing.

with hot bituminous tar and a coating of metal applied in two layers, the first layer being grouted with tar, and the second or top layer of metal being immediately applied. After a sufficient length of road had been coated to the full thickness, the second or top layer of metal was grouted as before, blinded with ¾-in. clean whin chippings, and rolled until consolidated, after which the road was sprayed with tar, blinded with clean ½-in. chippings, and again rolled. The surface so obtained was left for about a week or ten days, when it was sprayed with tar and blinded with clean ½-in. chippings. This section has given excellent results. There has been no disintegration of the surface. It has, however, been surface-sprayed every summer. It has now been down for over four years, and since it had its surface dressing at the beginning of this summer (1914) it appears to be in better condition than I have yet seen it. It has a hard metallic surface, and in the winter months requires no more cleaning than a causewayed or asphalt road.

The cost of this section was as follows:—

Material.	Quantity per sq. yd.	Price per sq. yd.
2½ in. hand-broken metal	·119 tons	5·7d.
½ in. whin chips	·017 tons	1·0d.
Cartage	·057 hours	·8d.
Tar	1·81 gallons	4·97d.
½ in. whin chips	·004 tons	·2d.
Labour	·18 hours	1·8d.
Roller	·0027 days	·8d.
		17·23d.

ORDINARY MACADAM TAR-SPRAYED.

The ordinary macadam tar-sprayed section was laid down by the usual method, special attention being directed to the quality of the binding material, which consisted of ½-in. chippings with about 20 per cent of dust. The clean form of binding used entailed a considerable amount of rolling. After this road had thoroughly dried, the surface was swept (the interstices of the metal being well opened up), sprayed with tar well brushed into the road with hand brooms (1 gallon of tar covering 2·82 sq. yds.), and covered with clean ½-in. chippings. The tar-spraying on this section stood out well until the beginning of November, 1910, when it started to break up, particularly in the centre of the road, which had to be scraped periodically during the winter months.

This section has been sprayed in the summer months which have followed, and each summer it is found more difficult to clean the road preparatory to surface-tarring, an ordinary rotary brush preceded by a watering-cart having little or no effect. This difficulty was got over this summer by scouring the road with water under pressure from an ordinary fire hose.

At the beginning of this summer several potholes were in evidence on this section, but with the tar-spraying these have to a considerable extent disappeared. I anticipate, however, that after the winter of this year a good deal of patching will be required.

The cost of this section was as follows:—

Material	Quantity per sq. yd.	Price per sq. yd.	
2½ in. hand-broken metal	·10 tons	4·75d.	
½ in. chips and dust	·008 tons	·40d.	
Cartage	·116 hours	1·40d.	
Watering	–	·28d.	
Labour	·16 hours	·96d.	
Rolling	·005 days	1·44d.	
			11·27d.
Tar Spraying—			
Sweeping road surface with rotary brush and removing sweepings	·0024 hours	·057d.	
Labour assisting at ditto	·0024 hours	·016d.	
Bringing up tar	·35 gallons	·974d.	
½ in. whinstone chippings	·0034 tons	·20d.	
Labour heating and applying tar and chippings	·045 hours	·27d.	
Carting chippings	·004 hours	·048d.	
Sundries	–	·044d.	
			1·71d.
Total			12·98d.

ORDINARY MACADAM.

The fourth section—ordinary macadam—was laid in the manner described in the preceding section, but was not tar-sprayed. Nothing has been done to this section during the last four years, with the result that it is tracked, and has a considerable number of potholes and will require to be recoated at an early date. The cost of this section was the same as the immediately preceding one, less, of course, the tar-spraying.

GENERAL.

Acting on the results of these experiments, I have abandoned entirely ordinary macadam and ordinary macadam tar-sprayed (except on light-trafficked streets, where tar-spraying has been quite satisfactory, keeping a good surface during the winter months), and until this year have adopted the double tar-grouting process with more or less satisfactory results.

A considerable amount of tar-spraying is carried on every summer, and all the streets in the burgh which are in fair surface have been dealt with in this manner.

The sprayer supplied by Llewellins & James has been used for this work, and, given good weather, I have been able to get between 800 and 900 gallons of tar put down in an ordinary working day.

ROAD RECONSTRUCTION.

In addition to the ordinary tar-spraying and improved surfacing of the roads, two sections of road have been reconstructed: (1) 466 lin. yds. of the Low Road to Stirling, viâ Airth and Dunmore, and (2) 900 lin. yds. of the Bo'ness—Grangemouth—Falkirk—Glasgow road.

Low Road to Stirling.—This road, which, for the greater portion of its length, was considerably below the high water of ordinary spring tides, and liable to be flooded, was raised about 3 ft., bottomed with 9-in. hand-set bottoming, and surfaced partly with tarred macadam tar-sprayed and partly with double tar-grouting tar-sprayed. The total cost of this reconstruction amounted to £1,375, which included the building of a cheap form of retaining fence (constructed with sleepers placed vertically at 9-ft. centres tied into the old road surface with ¾-in. iron bolts and anchor plates in concrete, the length between the uprights being filled in with sleepers placed horizontally), and the alteration of various parapet walls and fences and subsoil drains.

The surfacing was carried out in the early summer of 1913, and it is interesting to note that at the beginning of this summer, whereas the tarred-metal portion of the road showed signs of disintegration, the double tar-grouted portion was in fairly good surface. The whole road, however, was surface-tarred this summer.

Bo'ness—Grangemouth—Falkirk—Glasgow Road.—A section of this road (practically level for its entire length) was reconstructed at a cost of £2,100, which included the lifting and resetting of the existing kerb and channel, 9 in. of hand-set whin bottoming, and surfacing with whinstone, grouted and fluxed with a bituminous compound consisting of 80 per cent of Mexphalte and 20 per cent of Fluxphalte. The method of surfacing was as follows:—

Whinstone, of which 65 per cent was broken to the size of 2½ in. and 35 per cent to sizes graded from 2½-in. to 1¼-in., was applied to the road at the rate of an average of 7 sq. yds. to the ton, rolled down dry until a fair surface was obtained. The whinstone was thereafter grouted with the bituminous compound above referred to at the rate of 1½ to 2 gallons per square yard, depending on the thickness of the metal coat, the grouted surface being immediately covered with ¾-in. clean whinstone chippings at the rate of 91 sq. yds. to the ton, and rolled rapidly before the grout had time to set. The surface thus obtained was, after a period of twenty-four hours, fluxed with the same compound at the rate of ½ gallon to ⅝ gallon per square yard, floated over the road surface with suitable brushes and immediately thereafter covered with, on part of the road, ⅜-in. clean whin chippings, and on the remainder of the road, ¼-in. limestone chippings and dust, at the rate of 1 ton to 160 sq. yds. and 1 ton to 300 sq. yds. respectively, the traffic being allowed to work the chippings in.

To enable the work to proceed without any waiting, four boilers were used, three of these boilers being employed boiling the Mexphalte and one the Fluxphalte. Four barrels of Mexphalte were put into each of the three boilers, and the quantity of Fluxphalte required to make the mixture of Mexphalte and Fluxphalte was added to the Mexphalte boilers from the other. The mixture was well stirred up, and brought to a temperature of 400 deg. Fahr. The quantity of compound in each boiler was a known one, and the area of the road surface to be grouted or fluxed was marked off, and the contents of the boiler applied. Ordinary grouting cans were used in applying the compound. When grouting these were fitted with special fish-tailed nozzles about 4 in. broad and ½ in. open in the centre opened out to ⅝ in. at the sides, and when fluxing, with spreaders 18 in. wide and 6 in. deep, which spread the compound evenly for rather more than the width of the spreader. The area of

£1,015.

heavy traffic in addition to an hourly service of motor buses between Grangemouth and Falkirk. It would be premature to give an opinion at the present time, but so far this road appears to have improved with its age. It will have a severe test during the winter

PRO PATRIA.

[TWELFTH LIST.]

We present herewith the twelfth list of municipal engineering and sanitary officials who are taking part in the war and shall be glad to hear of other cases within the knowledge of our readers.

Dadley, C. F., city estate surveyor's office, Oxford, Territorial Division, Oxford and Bucks Light Infantry.

Frazier, Cyril, pupil, borough surveyor's department, St. Ives (Cornwall), Duke of Cornwall's Light Infantry.

Gardner, H., sewage works employee, Corporation of Leeds, private, Army Service Corps.

Gibson, W. L., county surveyor and engineer to the County Council, Lieutenant, Scottish Horse.

Jennings, W., borough surveyor's department, St. Ives (Cornwall), sergeant, No. 5 Company, Duke of Cornwall's Light Infantry.

King, T. F., assistant borough surveyor, St. Ives (Cornwall), corporal, 5th Battalion Duke of Cornwall's Light Infantry (Territorials).

Lucas, Cyril, town clerk's office, Oxford, Territorial Division, Oxford and Bucks Light Infantry.

Urban District Council, motor bicycle dispatch rider, Northumberland Hussars Yeomanry.

Renton, T. Bryson, pupil (and son) of the surveyor, Whickham Urban District Council, motor bicycle dispatch rider, Northumberland Hussars Yeomanry.

Turrill, William, engineering assistant, city engineer's Department, Oxford, Queen's Own Oxfordshire Hussars, with Expeditionary Force.

Wagstaff, C. P., public library department, Oxford, Territorial Division, Oxford and Bucks Light Infantry.

Wake, Harold, assistant in sanitary department, Oxford, Territorial Division, Oxford and Bucks Light Infantry.

Wall, R., clerks' department, city engineer's office, Worcester, 8th Battalion, Worcester Regiment (for foreign service).

Webb, H. M., B.SC., engineering assistant, city engineer's office, Worcester, 8th Battalion Worcester Regiment (for foreign service).

Willcox, Claude, correspondence clerk, city engineer's Department, Oxford, Territorial Division, Oxford and Bucks Light Infantry.

Williams, W. L., chief assistant, borough engineer's office, Wrexham, Second Lieutenant, 9th Battalion, South Wales Borderers.

Lieutenant Arthur Evans, son of Mr. Evan Evans, county surveyor of Carnarvonshire, a member of the Denbigh Engineering firm, was severely wounded in the leg and had to have one of his legs amputated.

CONCRETE ROADS.

TRIAL SECTIONS IN KENT.

Mr. H. T. Chapman, county surveyor of Kent, is at present laying four trial sections of concrete road [illegible] Road Board [illegible]. The work is being [illegible] Dover road, between Guestling and Stone, and about 1 mile from the centre of Guestling. The sections are to be each 7 yds. in length, and the concrete is to be laid as follows:—

Section No. 1.

Reinforcement.—Expanded Metal Company's No. 61 3-in. diamond mesh expanding steel, 3 ft. wide. Sheet bedded in the concrete 2 in. from the surface, and to extend 18 in. on either side of centre joint.

Finished Surface.—Sufficiently rough to give good foothold.

Section No. 2.

Reinforcement.—Same as No. 1.

Finished Surface.—When surface has become quite dry to be dressed with tar and a thin coat of 1¼-in. clean limestone chippings.

Section No. 3a.

Reinforcement.—¼-in. diameter round rolled steel bars, placed 1½ in. from top surface of the concrete, 9 in. c. to c., both longitudinally and transversely.

Finished Surface.—Same as No. 2.

Section No. 3b.

Reinforcement.—Expanded Metal Company's No. 61 diamond mesh expanded steel with strands $\frac{5}{16}$ in. by ¼ in., to be placed 2 in. from top surface.

Finished Surface.—Same as No. 2.

Section No. 4a.

Reinforcement.—United States Steel Product Company's triangle mesh steel wire reinforcement No. 7, to be placed 2 in. from top surface.

Finished Surface.—Same as No. 2.

Section No. 4b.

Reinforcement.—British Reinforced Concrete Engineering Company's B.R.C. fabric, reference No. 9, to be placed 2 in. from top surface.

Finished Surface.—Same as No. 2.

General.

Filler for Expansion Joints.—Commercial soft pitch, to Road Board Specification No. 6.

Protection of Surface.—When concrete has set surface shall be covered with wet sand 2 in. in depth, same not to be moved for eight days. Sand to be kept wet.

The surface of the concrete in all cases to be suitably roughened to give a foothold to horses. Longitudinal and transverse expansion joints to be provided in all sections.

It may be stated that the British Portland Cement Manufacturers, Limited, are supplying the specially prepared slow-setting cement, and the firms above mentioned the reinforcing materials, free of cost.

The work will be in hand next week, and Mr. Chapman's assistant, Mr. Gordon Stevens, who is superintending it, will be happy to give all visitors any information.

Bedfordshire Roads. In his annual report on the roads the county surveyor of Bedfordshire, Mr. W. H. Leete, states that there are 735 miles of rural main roads in the county, an increase of 38 miles since 1896-7. Their total cost in 1896-7 was £30,918, or £44 6s. 5½d. per mile, and in 1913-14 it was £58,365, or £79 7s. 2d. per mile. Towards this sum £4,189, or £5 13s. 11d. per mile, has been contributed by the Road Board, so that the nett cost to the county was £73 5s. 5d. per mile. The actual rise in the past year was £5 18s. 2d. per mile. Urban main roads are also far more costly than they used to be.

Law Notes.

Edited by J. B. REIGNIER CONDER, II, Old Jewry Chambers, E.C., Solicitor of the Supreme Court.

The Editor will be pleased to answer any questions affecting the practice of engineers and surveyors to local authorities. Queries (which should be written legibly on foolscap paper, on one side only, and addressed to "The Law Editor," at the office of THE SURVEYOR, accompanied by the writer's name and address,) of correspondents who do not wish their names to be published should also furnish a "nom de plume." Where necessary, copies of local Acts or documents referred to should be enclosed. All explanatory diagrams must be drawn and lettered in black ink only, and in such style as to be fit for direct reproduction (i.e., without re-drawing or amendment). Unless these conditions are complied with we cannot undertake to reply to queries.

STREET WIDENING: COMPULSORY PURCHASE: INTERFERENCE WITH MAIN STRUCTURE. The decision of Mr. Justice [illegible] in the case of [illegible] Council, 1913, has been affirmed by the Court of Appeal (1914, 2 Ch. 258). It may be remembered that the council applied to purchase compulsorily the forecourt of a chapel for the purpose of street widening, under the London County Council (Tramways and Improvements) Act, 1901. The trustees of the chapel refused to sell the forecourt separately, and required the council to purchase the whole of the property on the ground that the proposed scheme would practically involve the destruction of the building. Sec. 18 of the Act empowered the council to take such parts as they may require of properties without being compelled to purchase the whole, but with the important proviso that the council are not to be entitled to take or intertere with the main structure of any building. Mr. Justice Joyce held that the destruction of access would constitute an interference with the main structure within the meaning of the Act. In the Court of Appeal it was contended, on behalf of the council, that the section only applied to the taking of property, and had no reference to the works executed after it was taken; also that, inasmuch as the council did not propose actually to take any part of the building there would be no "interference" with the main structure. In the course of his judgment, dismissing the appeal, the Master of the Rolls said it was proposed to take practically the whole of the forecourt of the chapel, and to leave it abutting directly on the new footway, the effect of which would be to render the access to the main structure of the chapel impossible to be used without danger, and to make one of the side entrances equally dangerous; in fact, there would be something like a precipice at the foot of the steps. On the facts of the case, it was hard to imagine a clearer case of interference. The chapel could not be used without reconstruction if the proposed works were carried out. They not merely destroyed the present access, but left no reasonable mode by which a new access could be obtained. There would be a declaration that the defendants were not entitled to take the portion of the plaintiff's chapel specified in the notice to treat without taking the whole, and an injunction as asked for by the writ.

NEW STREET: RESTRICTIVE COVENANT. An important point in connection with the laying out of a new street arose in the case of [illegible] Council v. [illegible] (1914, 2 Ch. 488), on appeal from Eve, J. A landowner made an application to the council for their sanction to the laying out of a new street under sec. 7 of the London Building Act, 1894. The council agreed to give such sanction conditionally upon the owner entering into a covenant not to build upon a piece of land abutting on the end of the proposed street, so that it should be possible to extend it at some future time. This condition was agreed to, and the owner entered into a covenant with the council accordingly. Subsequently, however, he sold the land in question to the defendant, who, although he had notice of the covenant entered into by his vendor, began to erect houses on the land. The council thereupon brought this action to prevent him from building. But it was held by the Court of Appeal that the defendant was not bound by the covenant and was entitled to build in spite of it. The ground of this decision was a somewhat technical one—viz., that the council were not in possession of, nor interested in, any land for the benefit of which the covenant was entered into.

QUERIES AND REPLIES.

In order to avoid confusion querists are requested to use distinctive words as noms de plume. The letter X, combinations such as X.Y.Z., and words such as "engineer" and "surveyor," should never be used.

ACETYLENE GENERATOR.—"A. B." writes: Will you kindly give me the following particulars respecting the [illegible] generator [illegible] (1) Is a person [illegible] required to give notice [illegible] of the particulars required to be given on the storage of carbide? (2) Is there any rule or regulation which prohibits the generation being fixed inside the dwelling-house? (3) Is the generator for making acetylene gas subject to inspection; if so, by whom?

(1) The provisions of the Petroleum Act are applied to carbide of calcium with modifications by an Order in Council dated August 8, 1901. The Order provides that the quantity of carbide of calcium that may be kept without a licence shall be 5 lb. Where it is kept in separate hermetically closed metal vessels containing not more than 1 lb. each, 25 lb. Where the following conditions are observed, 28 lb. may be kept in a metal case, of vessels hermetically sealed at all times when it is not being placed in or withdrawn from the vessel. The vessels to be kept in a dry and well-ventilated place, and the precautions to be taken to prevent unauthorised persons having access. Notice to be given to local authority, and free access to their inspector to premises where carbide kept and generator situated; where a fixed generator is used on the premises, a certificate issued by maker or supplier of generator that it complies with regulations of British Acetylene Association to be exhibited near it; (*f*) full instructions as to care and use of generator to be posted, so as to be conveniently referred to by attendant. Where any of the above conditions are not observed, or the quantity exceeds 28 lb., a licence is necessary. (2) Apparently not. (3) Yes, by the local authority's inspector. See clause (*d*) above.

CAMPS FOR ALIENS.—"E. C." writes: As a regular subscriber to your paper, I shall be glad if you could inform me if the Government has authority to set up camps for the imprisonment of aliens within the town boundaries. Under what powers can they set up camps? Have the town authorities officials any right of inspection? I might say the camp that is being put into process of erection is a holiday camp in summer, and is capable of holding 3,000 persons; therefore I find it very necessary to give careful inspection during the summer months, and seeing that it is being used for aliens I consider that extra care we should be taken to protect the ratepayers from any outbreak of fever.

These camps are presumably under the control of the Secretary of State for War, who has power to make rules for their government and to appoint inspectors, &c. It would therefore appear that, under subsec. 7 of sec. 9 of the Housing, &c., Act, 1885, they are exempt from inspection by the sanitary authority or their officers.

INSPECTOR OF NUISANCES: DUTIES.—G. J. S. writes: Would you be good enough to define the exact duties of an inspector of nuisances to a rural district council: (1) With regard to the reconstruction of old drains and appliances to buildings which may be necessary under an order from his authority? (2) With regard to new drains, cesspools, and buildings which may be erected in consequence of an order from his authority? (3) What would be the duties and authority of the buildings surveyor to the same council in relation thereto?

1 and 2. The duties of an inspector of nuisances are set out in Article 20 of the Local Government Board "Sanitary Officers (Outside London) Order, 1910," and in Article 20 of the "Sanitary Officers (Port) Order, 1910." Clause (13) of Article 20 of the first of these Orders directs that the sanitary inspector shall, if directed by the council to do so, superintend and see to the due execution of all works which may be undertaken under their direction for the suppression or removal of nuisances. It will therefore be the duty of the inspector, if so directed by his council, to superintend and see to the due execution of any works which may be undertaken with respect to drains, cesspools, and buildings, whether old or new, for the suppression or removal of nuisances. (3) If so required by the council the surveyor would have to superintend the execution of the works.

AWARDED ROADS.—"B. H." writes: Are there any quoted cases of disputes as to whether an award road is a public or a private street?

There are one or two reported cases arising from disputes as to the status of awarded ways. In *Ouseley v. Mayor* (L.R., 7 C.P., 101), a road was set out as a public road under an award and fenced, but was never formed and completed so as to satisfy the requirements of the General Inclosure Act, 1801, nor was it ever taken to or used by the public as a highway. It was decided that the road had not become a highway. In *Sevenoaks Urban District Council v. Holley*

[illegible] Act, 1894, [illegible] a strip [illegible] an Inclosure Award of 1825, awarded as a [illegible] more to be used for wheeled [illegible] to be set for forty years the [illegible] to foot passengers. Mr. Justice Joyce held that the user for [illegible] and that no length of time could legalise it, since, after the Award, no [illegible] the public as a public carriage-way. In [illegible] the Surveyor, [illegible] a private bridleway and footpath [illegible] Award in 1814. In this case [illegible] the way had become a public highway for all purposes, by public user, and the [illegible] whether it was repairable by the inhabitants at large. The evidence showed that it had not become a public highway until after the passing of the [illegible] and it had never been formally [illegible] under section 23 of that Act the House of Lords held that it was not repairable by the inhabitants at large.

STANDARDS FOR SEWAGE EFFLUENTS.

PROPOSED CENTRAL AUTHORITY.

In the autumn of 1913 a committee of the Association of Municipal Corporations held a number of meetings in London to consider the probable effect of amending the Public Health Act, 1875, on the lines of the recommendations of the Royal Commission on Sewage Disposal and particularly to consider those recommendations which are set forth in the Summary of Conclusions, par. 62, p. 17, of the Eighth Report.

The discussions established the fact that the committee—whose members were selected for their skill and experience in the design and maintenance of sewerage and sewage disposal works—are in complete agreement that the law as it stands is greatly in need of amendment, but that it is not desirable that standards of purity should be prescribed by Parliament as the Royal Commission recommend.

As a reason for this decision, Mr. J. D. Watson, M.Inst.C.E., engineer to the Birmingham, Tame and Rea District Drainage Board, in a letter addressed to the secretary of the Association of Municipal Corporations, on behalf of the committee, points out that the predominating factor in considering the advisability of creating a standard by Act of Parliament is the fact that no two cases are precisely similar. Accordingly, the committee are of opinion that it should be left to a central authority to determine finally all disputes as to the quality of effluents, and to settle any incidental questions, such as the amount of compensation or damages, while there should also be power to make regulations as to the taking of samples.

The committee have come to this view with reluctance, being aware of the prevalent objection to multiplying Government Boards, but they see no workable alternative; the setting up of a standard of purification by Act of Parliament they believe to be quite impracticable. They proceed to suggest that any amendment of the law "should be to improve or conserve the condition of the rivers, and not to compel municipalities to discharge sewage effluents of uniform quality." Just as the judgment of the Local Government Board in matters of construction is now accepted, so, they consider, should the decision of the proposed central authority be accepted in all matters relating to the pollution of rivers; and as the Local Government Board have power to vary their requirements as a condition of sanctioning a new loan, so should the central authority have power to vary their requirements as a condition of assuming responsibility for allowing effluent to enter a stream. Finally, the committee express the belief that a central authority could greatly help municipalities by establishing and maintaining a national research department.

At their last meeting the Birmingham, Tame and Rea District Drainage Board passed a resolution to the following effect: "That the opinions of the experts be adopted as the views of the board in the event of Parliament being asked to legislate on the subject, subject to proper provisions safeguarding the rights of individuals and public bodies in the courts of the country."

Dangerous Tarred Roads.—At Otley on Wednesday a coroner's jury decided that the death of a young man was due to the slippery state of the tarred roads. They asked the coroner to inform the local authority that, as the roads are now made of such a fine, hard surface, they are unsafe both for horse and other traffic, and to urge the necessity of a systematic supervision of the roads.

CORRESPONDENCE.

Sir, though I would persuade, I'll not constrain.
Each man's opinion freely is his own
Concerning anything, or anybody.
—Massinger: "The Fatal Dowry," Act ii., 2

HOUSE REFUSE MANURE.

To the Editor of The Surveyor.

Sir,—I have read in your issue of 13th inst. the contents of a lecture delivered by Prof. E. R. Matthews at University College. In it the lecturer states that "there is great difficulty in disposing of house refuse to farmers," and quotes in support of his statement the failure of three French factories that manufactured house refuse manure for French farmers.

I wish most strongly to protest against so unwarranted an assertion. The failure of these companies may have been due to the fact that they did not treat house refuse in the proper way. Whether, however, this or any other be the reason, the following figures show that, at any rate so far as this country is concerned, not only is there no difficulty whatever in disposing of house refuse manure, but the contrary is positively the case. The following table shows the increase in the demand for house refuse manure made with Patent Lightning Dust Manipulators at the depot of the metropolitan borough of Southwark during the past eight years, the dates being until March 31st each year:—

Year.	Tons sold.	Year.	Tons sold.
1907	2,206	1911	10,056
1908	8,641	1912	15,440
1909	8,901	1913	18,346
1910	9,696	1914	19,495

I am informed that the demand now greatly exceeds the supply.

The corporation of Hove, Sussex, seem to find no difficulty in getting rid of this manure, for, having erected a plant in June, 1913, they are now about to erect three more machines.

I could quote more figures, but refrain in order not to trespass on your valuable space.—Yours, &c.,

The Patent Lightning Crusher Co., Ltd.
(A. D. Furse, Manager).

THE TRAINING OF MUNICIPAL ENGINEERS.

To the Editor of The Surveyor.

Sir,—On the above subject, after thoroughly reading the report of the evidence given by Messrs Brodie and Platt, I quite agree that the ideal is fairly represented by Mr. Platt's evidence, and the practical or what does actually occur by Mr. Brodie. How many parents can afford £500 for a university career and pupilage plus keeping his son for five years without any remuneration? I am afraid not many, and there would be fewer if the parents would only realise that all assistants cannot be chiefs, and that some are not earning a salary large enough to allow of their being married. If Mr. Platt could get B.Sc.s for pupils, would he agree to a minimum salary of £150 for assistants?

I agree with Mr. Willis that a pupil who will work hard and carefully will reap more foundation work for his career in an office of an engineer in a town of about 30,000 inhabitants than in a large office where all work is specialised, and I think the pupil who has to gain his examinations by evening work cultivates perseverance and doggedness, and if in a small district he struggles to get on and into a larger office where work on a greater scale is executed. It would be interesting to know how many of the present chiefs of towns over 100,000 population began their careers in small offices. I think a man in municipal engineering ought to be compelled to pass the Municipal and County Engineers' examination, otherwise he ought not to be given a berth; then ultimately engineers might be on the same footing as solicitors. If he wishes to widen his studies, he can then take the Institution of Civil Engineers' examination.

As regards the Victoria University and Municipal School of Technology training, I disagree with Mr. Platt entirely when he says "that the latter course is not so good as the former." I think for the municipal engineer the Technical School's course is the better.—Yours, &c.,

Auld Lang Syne.

THE PONDING OF SEWAGE.

To the Editor of THE SURVEYOR.

SIR,—In an article by Mr. W. Naylor in THE SURVEYOR of the 20th inst. he draws attention to the purification effected by ponding of sewage on the Preston sewage farm some years ago. The same thing used to be noticeable on the Altrincham farm some years ago, where a similar procedure of ponding was followed. In this instance the sewage was ponded to a depth of some 9 in. to 12 in., and after a windy day, causing wavelets on the surface of the liquid, considerable improvement was effected by aëration, but also by deposition of fine solids, and, most of all, in sunshiny weather, by oxygen given off by green algæ.

At times the Cambridge sewage farm filtration areas, as seen from the Great Eastern Railway, resemble brilliant green carpets, brought about by the growth of algæ, and in this instance also the supernatant water is of a much better quality than the oncoming tank liquor. I have not seen the Preston farm since 1898.—Yours, &c.,

CAMP SANITATION: WATER.

To the Editor of THE SURVEYOR.

SIR,—Several readers have written me in respect to an error and omissions in my article on the above in your issue of last week. The error is in the formula $\frac{2^{c}}{12^{2}} \times \frac{W}{4} \times 6{\cdot}25$, which should have been $\frac{2^{c}}{12^{2}} \times \frac{\pi}{4} \times 6{\cdot}25$.

In respect to the horses' watering ground, the following description was omitted: T=troughs; C=trough fixed to land contour; D=horses drinking; W=first lines of animals waiting turn; R=remainder of horses; E=entrance gates; O=fences removed to make outlets to prevent oncoming horses impeding those leaving.—Yours, &c.,

G. BERTRAM HARTERELL.

Baverstock,
Alton,
Hants.
November 23, 1914.

The Ruislip-Northwood Town Planning Scheme. This will be the subject of a paper to be presented by Messrs. E. R. Abbott and F. M. Elgood, F.R.I.B.A., F.S.I., at a meeting of the Town Planning Institute to be held at 92 Victoria-street, S.W., on Friday, December 4th next. The chair will be taken at 8 p.m.

THINGS ONE WOULD LIKE TO KNOW.

(Contributed.)

Is it not permissible, though in a technical journal, to quote here and now the last two verses from a little-known poem "The Reveille" which Bret Harte wrote as a call to join the North in the United States War of 1861-4?

"What if, 'mid the cannon's thunder,
Whistling shot and bursting bomb,
When my brothers fall around me,
Should my heart grow cold and numb?"
But the drum
Answered, "Come!
Better there in death united, than in life a
miserable
Come!"

Thus they answered,—hoping, fearing,
Some in faith, and doubting some,
Till a trumpet-voice proclaiming,
Said, "My chosen people, come!"
Then the drum,
Lo! was dumb,
For the great heart of the nation, throbbing,
answered,
"Lord, we come!"

* * * *

What would be said by John Rennie—the architect of three great London bridges, the engineer of the Plymouth breakwater, of the principal London docks, and of many other works of great national importance—if he could see the standard of modern locomotion? In 1763 the one stage-coach which formed the sole communication of the kind between London and all Scotland began to run; and Rennie, when a boy, was familiar with the sight of this uncouth vehicle lumbering along the road past his door. It "set out" from Edinburgh only once a month, the journey to London occupying from twelve to eighteen days, according to the state of the roads!

* * * *

How long will it take before all the common courtesies of professional life have disappeared? Why is it that only a few years ago if one professional man wanted some information from another he wrote him a letter asking for it, whereas now he tells his typist to telephone for it?

* * * *

Does it not seem rather cruel that some of our hard-earned money should be employed to pay Mr. Keir Hardie to retain his seat in Parliament? Is it not almost incredible that this man should be allowed to slander his fellow countrymen with impunity? Who could read Mr. Edgar Jones' indictment of this man's action without being amazed at the supineness of the people who can stand it as they do?

* * * *

Is it not altogether a matter for surprise that the proposed new great road out of Portsmouth has been abandoned for the present? Is it not a fact that the chairman of the Road Board on being approached for a substantial grant towards the total estimated cost of £200,000, decided that there were other proposed roads of greater national importance? Does anybody know what is the *true* opinion of the military experts on the advisability or otherwise of this road, and does anyone know *where* are the proposed roads of greater national importance?

* * * *

Is it true what some people are now saying, that if it had not been for the war this country would now have found itself plunged in the most bitter, prolonged and terrible labour strife that the world had ever seen? Does it not make us pause to reflect which catastrophe would have affected the ultimate fortunes of our country the most? Is there not always the great difficulty in all public affairs that one never can tell what would have been the result if something had not happened?

The New Southwark Bridge.—Mr. W. Hayward Pitman, chairman of the Bridge House Estates Committee of the Corporation, last week laid the foundation-stone of the new Southwark Bridge. Speaking afterwards, he said the approaches to the bridge were now virtually complete. Mr. Biggart, representing Sir William Arrol & Co. (Limited), the contractors, said he believed the bridge would be finished to contract time.

Assistants' and Students' Section.

CONDUCTED BY SYDNEY G. TURNER, ASSOC.M.INST.C.E.

All communications in regard to this page must be addressed to the Editor, St. Bride's House, 10 Bridelane, Fleet-street, E.C., and must be marked "Assistants' and Students' Section" in the top left-hand corner. Correspondents are invited to send questions for consideration and answers to the questions which appear. For the contributions considered to be the most meritorious, one or more premiums in books will be awarded monthly. Diagrams must be drawn to scale on separate sheets, ready for reproduction.

QUESTIONS.

[illegible] are invited to the following:—

440. Bending Moment. [illegible] 20 [illegible] Draw the resulting moment and shear [illegible]

441. Bending Moment.—A beam of 100 ft. span has [illegible] Draw the resulting moment [illegible]

442. Building Materials.—What are encaustic [illegible]

443. Vectors. What [illegible]

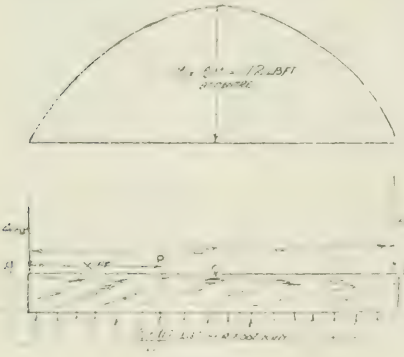
444. Strength of Shaft.—Find the relation between [illegible] Find the least diameter of a solid steel [illegible] the stress being limited to 9,000 lb. per square inch.

[The Editor is at all times glad to hear from readers who desire to submit questions regarding matters of general interest, points of daily practice, &c., for insertion in the "Assistants' and Students' Section." Questions which are published are taken into consideration, as well as other matter, in awarding the Monthly Premium.]

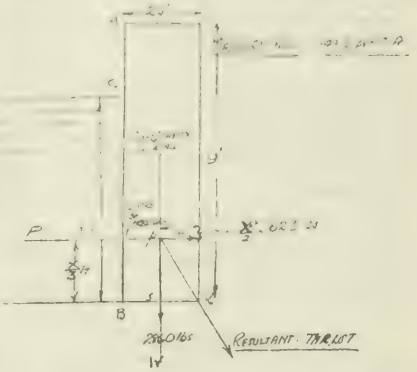
REPLIES TO QUESTIONS.

438. Strength of Materials.—If a straight prismatic baulk of timber floats in a horizontal position with a weight of 4 cwt. hung to each end, what will be the bending moment at the centre of its length?

If the beam is of uniform cross-section it will be immersed to a constant depth throughout its length, due to its own weight and the symmetrically placed loads of 4 cwt. at each end. Since the loaded beam floats, the total downward load must equal the total upward force due to the pressure of the water on the under surface. The upward force due to



the water pressure) acting on the wetted surface included between two cross-sections, say, 1 in. apart, is the same at any point along the beam, for the immersed surfaces are exactly alike and immersed to the same depth. Hence the baulk of timber is subjected to an upward equally distributed load, whose total value is equal to the "weight of beam + 8 cwt." It is obvious that there is no bending moment due to the weight of the beam, and the maximum [illegible] weight of the beam, due to the water pressure, for we have two equal distributed loads acting in [illegible] Hence the beam may be considered to be [illegible]



cwt. and a uniformly distributed load of 8 cwt. acting upwards.

Let L ft. be length of beam. Load per foot-run acting upwards $= \frac{8 \times 112}{L}$ lb. Taking moments about a point P distance x ft. from A we get—

$M = 4 \times 112 \times x$ = BM due to distributed load on AP

$- 4 \times 112 \times x - \left(\frac{8 \times 112}{L} \cdot x\right) \cdot \frac{x}{2}$ lb.-ft.

$M = 4 \times 112 \left[x - \frac{x^2}{L}\right]$ which is the equation of a parabola.

At centre O, $x = \frac{L}{2}$

and BM $= 4 \times 112\left[\frac{L}{2} - \frac{L^2}{4L}\right] = 4 \times 112 \frac{L}{4} = 112\,L$ lb.-ft.

(R. H., *Fulham.*)

The case is that of a beam supported at each end and bearing a distributed load of 4 + 4 = 8 cwt.

Then bending moment at the centre = maximum bending moment

$$\frac{WL}{8},$$

(where W = load,

and L = length of beam)

The length is not given, so let it equal x feet

Then bending moment in centre $= \frac{W}{8} = \frac{8 \times 112}{8} = 112x$

i.e., bending moment at centre = (length of beam in feet × 112) ft.-lb.

(B. K., *Hayes.*)

439. Stability of Wall.—How high may water rise on one side of a vertical wall, 9 ft. high, 27 in. thick, of material weighing 143 lb. per cubic foot, before the resultant force at the base of the wall passes outside the edge?

Consider a portion of the wall of width 1 ft.

Total weight of masonry $= 9 \times 2\frac{1}{4} \times 143$ lb. $= 2,886$ lb.

This force acts through the centre of gravity of the wall.

Suppose the water rises x ft. before the resultant [illegible] passes outside base. Total force acting on

AB due to water (area of strip of height dh and width 1 ft.

$$\left[\text{pressure of vertical cavity} = \text{area} \times \text{height} \times \frac{1}{2}\right]$$

Pressure at P $= \frac{1}{2} \times 62.3 \times h \times 1$ sq. ft. where 62.3 = weight of a cub. ft. of water.

Total horizontal force = AE when $= \frac{1}{2} \times 62.3$

$$\frac{1}{2} \times 62.3 \times \frac{1}{3} = \frac{1}{2} \times 62.3 \text{ lb.}$$

The point where the resultant pressure of rectangular strip of water of depth $\frac{1}{3}$ depth of water below surface. The resultant passes through the point of intersection of directions of forces P and W. If base resultant passes just through edge E of base, we get the maximum height of water when resultant of P and W passes through R.

From triangle of forces $\frac{1}{3}$ R we see that

$$\frac{P}{W} = \frac{\frac{1}{2}}{\frac{2}{3}}$$

But $P = \frac{1}{2} \times 62.3$ lb.

and $W = 2{,}896$ lb.

$$\therefore \frac{1}{2} \times \frac{62.3}{2896} = \frac{1}{3}$$

$$\therefore \frac{9}{8} \cdot 3 \times \frac{2896 \times 2}{62.3} = 313.7$$

$$= 6.794 \text{ ft.} = 6 \text{ ft. } 9 \text{ in.}$$

Maximum height to which water may rise without resultant thrust leaving the base = 6 ft. 9 in. R. H. Fallows.

LOWER THAMES VALLEY DISTRICT SURVEYORS' ASSOCIATION.

A meeting of the above association took place at Twickenham on Saturday, the 7th inst., Mr. J. W. Croxford, the president, presiding over a good attendance of members.

The programme for the session was submitted by the president and approved. The subjects selected promise to be very interesting.

The proceedings of the meeting were mainly taken up with discussions on the approval of plans and their relationship with the observation of building by-laws, reinforced-concrete construction, resurfacing roads, and other matters.

The next meeting of the association on December 5th will take place at Twickenham, when a paper on "The Superintendence of Buildings under By-laws" will be read by Mr. E. Wilson, Assoc.M.Inst.C.E. The meeting on January 2nd will be held at Wimbledon, when an inspection of several important works will be made in the afternoon, to be followed by the meeting of the association in the evening, when Mr. C. H. Cooper, M.Inst.C.E., has kindly promised to read a paper.

Sewage Sprinklers: Catalogues Wanted.—Mr. G. E. Mitchell, inspector of nuisances and sanitary surveyor to the Clare, Suffolk, Rural District Council, would be glad to receive catalogues of sewage sprinklers suitable for a small percolating filter.

Housing Schemes and the Prices of Materials.—In the House of Commons last week attention was directed to the fact that the scheduled prices of materials required in connection with the Middle Ward housing schemes in Lanarkshire had been greatly increased owing to the war, and that the extra cost incurred would make it impossible to fix the rents of such houses on an economic basis. Having regard to the employment which such schemes were giving during the present crisis and to the need for providing adequate housing accommodation at an economic rent in these districts in Lanarkshire where the existing buildings had been already condemned, the Secretary for Scotland was asked whether the increased cost could be met by a special grant to the local authority in charge of the schemes, and thus permit of the work being proceeded with. Mr. McKinnon Wood, in replying, said there was not available any fund from which he could make a grant in the form proposed.

LOCAL GOVERNMENT BOARD INQUIRIES.

The Editor invites the co-operation of Surveyor readers with a view to making the information given under this head as complete and accurate as possible.

INQUIRIES HELD.

Bollington U.D.C. (November 12th.) [illegible] Mr. W. [illegible] to the purchase of land for the purpose of [illegible] Land Clauses Acts [illegible] the purposes of forming a recreation ground.

Coventry T.C. (November 19th. Mr. Edgar [illegible] £360 and £400 for the purchase of land for the improvement of Stoneleigh-terrace and Queen's-row respectively, and £180 for the widening and improvement of Stoneleigh-terrace and Queen's-road. Details of the various schemes were supplied by the city engineer, Mr. J. E. Swindlehurst, and there was no opposition to any of the applications.

Hemel Hempstead T.C. (November 10th. Mr. P. M. Crosthwaite).—£5,900 for works of sewerage in Leverstock Green and Adeyfield districts.—The borough surveyor, Mr. W. R. Locke, submitted drawings of the proposed scheme, and gave full details of the proposals. Arising out of an observation by Mr. Hampton (chief inspector, Thames Conservancy) as to the storm overflows, Mr. Locke mentioned that on the previous Friday afternoon ¾ in. of rain fell in half an hour, and there was no trouble. The water did not get to within 2 ft. of the overflow. The inspector: Are you satisfied with the scheme, Mr. Hampton? Mr. Hampton: I have no objection to it. The inspector: That's something. I know you never say you are satisfied. (Laughter.)

Leek U.D.C. (November 10th. Mr. M. K. North).—£1,030 for the purchase of land for extensions to gasworks, £2,455 for the construction of new streets, and £410 for the acquisition of land for allotment purposes.—The details of the purchase of land for gasworks purposes were explained by the gas engineer, and Mr. W. E. Beacham, engineer and surveyor, dealt with the construction of new streets, explaining plans and estimates, and the necessity for providing an outlet from the west end of the town to the station. The provision of land for allotments at the west end was also dealt with, and evidence was submitted by the surveyor, who afterwards conducted the inspector over the sites.

Paignton U.D.C. (November 18th. Mr. R. G. Hetherington).—£975 for works of sewerage.—The surveyor, Mr. C. O. Baines, stated that the proposed works included the laying of a 9 in. sewer at a cost of £700.

Penybont R.D.C. (November 12th. Mr. F. H. Tulloch).—£2,015 for the improvement of the coast road between Southerndown and the mouth of the river Ogmore. The surveyor, Mr. Ernest Jenkins, said it was proposed to widen and otherwise improve the road at both ends of the village of Southerndown where there are at present very sharp and dangerous corners, and to divert the road at Ogmore-by-the-Sea, so as to avoid the steep hill and abrupt turn which now make the road at this spot particularly dangerous.

Sunderland T.C. (November 17th. Mr. P. M. Crosthwaite).—£21,270 for the purchase of land at Ford for cemetery purposes.—It was stated that the land adjoined the existing cemetery on its west side. The term applied for was sixty years.

Wootton Bassett R.D.C. (November 10th. Major J. Stewart).—£1,200 for works of sewage disposal.—Mr. F. Redman, engineer to the scheme, explained the details. There were 14 acres of land, of which 10 acres would be available. The inspector expressed the opinion that the filter capacity was insufficient, and inquired what the estimated cost would be for the provision of two additional filters. Mr. Redman: It would cost about £150. The inspector said he thought the council would have to do something more before they secured the loan.

APPLICATIONS FOR LOANS.

Ardsley U.D.C.—£2,000 for gas main extensions.

Atherstone R.D.C.—£18,158 for a water supply for Warton.

Bognor U.D.C.—£558 for road improvements.

Brierfield U.D.C.—£7,500 for improvements to the sewage disposal works.

Chapel-en-le-Frith U.D.C.—£3,250 for a water supply for Fernilee and Chapel.

Honiton T.C. £[illegible] for works of sewerage.

Kingstown (Co. Dublin) U.D.C.—£54,867 for a house [illegible]

Leeds T.C. £[illegible] for improvements at gasworks.

Penrith R.D.C. £[illegible] for the Troutbeck water [illegible]

Raunds U.D.C. £250 for alterations at the isolation hospital.

Rugby U.D.C.—£810 for a public convenience.

Wilts C.C.—£27,225 for asylum extension, and £[illegible] for additional accommodation at the Salisbury isolation hospital.

LOANS SANCTIONED.

Cheadle and Gatley U.D.C.—£160 for a public [illegible] and recreation ground.

Chorley T.C.—£18,750 for vertical retorts and a condenser at the gasworks.

Epsom U.D.C. £2,060 for works of sewerage.

Exeter T.C.—£3,101 for street improvements.

Falkirk T.C.—£7,000 for electricity extensions.

Kilkenny C.C.—£1,520 for the purchase of steam rolling plant.

Littlehampton U.D.C.—£1,000 for laying out a recreation ground.

Portland U.D.C.—£250 for a cottage at the waterworks.

St. Germans R.D.C.—£1,750 for a water supply scheme.

Skipton U.D.C.—£8,405 for a sewerage scheme.

Swaffham R.D.C.—£1,238 for the provision of workmen's dwellings.

Tottenham U.D.C.—£12,620 for macadam; £206 for excavating and concreting West Green-road; and £412 for wood blocks.

Wells R.D.C.—£1,650 for a housing scheme at Meare.

Willesden U.D.C.—£2,617 for road works.

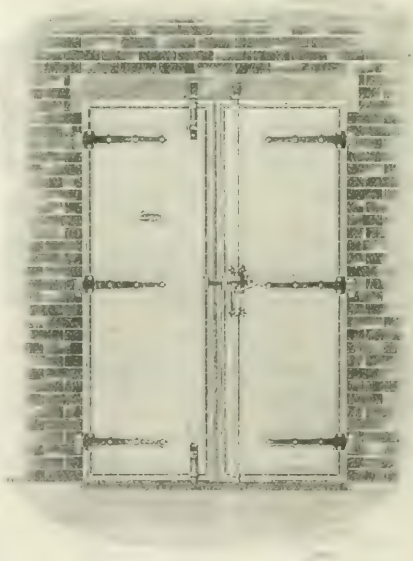
TOWN PLANNING.

2. **Hendon.** (Mr. George L. Pepler)

FIRE RESISTING DOORS.

Messrs. Mather & Platt, Limited, of Park Works, Manchester, are very extensive manufacturers of fire resisting doors and apparatus for automatic closing in case of fire. The firm have just issued a new catalogue of such appliances. In a very compact form the catalogue contains a large amount of information on the subject of fire doors, and gives prices of various types, such as armoured sliding fire doors, armoured hinge fire doors, armoured folding fire doors, and Mather & Platt's own patent "Stryp" fire door. The "Stryp" fire door is of a thinner and more ornamental type than the armoured door. It is constructed on the sliding principle, of steel sheets and asbestos. The temperature may be raised to white heat on one face only or on both without, it is claimed, causing serious distortion. Moreover, if while in this condition a powerful stream of water from a hose pipe is directed upon it and the metal is suddenly cooled, the door will still lie flat against the wall. In their new catalogue Messrs. Mather & Platt give illustrations showing the remarkable efficiency of the fire doors manufactured by them. Views are given of the interiors of various premises entirely burnt out, but with the fire resisting doors standing intact and preventing the spread of the fire to the adjoining premises. All who are interested in the protection of large premises against serious fire should apply to Messrs. Mather & Platt for one of these new lists.



"STRYP" FOLDING DOOR.

Municipal Work in Progress and Projected.

The Editor invites the co-operation of SURVEYOR *readers with a view to making information given under this head as complete and accurate as possible.*

The following are among the more important projected works, of which particulars appear below: Buildings—Dundee, Gourock; housing and town planning—Weymouth; refuse disposal—Perth; roads and materials—Argyllshire, Colwyn Bay, Hants, Ponty pool, Southampton; sewerage and sewage disposal—Carlisle, Mansfield; water, gas and electricity—Malton, Redditch. Particulars of other works projected will be found in our "Local Government Board Inquiries" pages.

BUILDINGS.

Accrington T.C.—It has been decided to build a new fire station.

Brighton T.C.—The Tramway Committee recommend extensions to the Lewes-rd. depot, including an additional working bay and a smith's shop.

Dundee T.C.—The council on Monday gave consideration to the proposed town hall scheme. The city engineer, Mr. James Thomson, submitted plans showing that the total cost would be £350,000, this meeting £100,000 given by Sir James Caird to build the new hall. Of the £250,000 remaining £170,000 was for the purchase of property. It was explained that for the expenditure proposed there would be a city hall, wings for letting purposes, with a large square in the centre, and a public market under the square. The annual income would be £10,990 and the expenditure £13,210, leaving a deficit of £2,220. Ultimately the matter was adjourned for the preparation of a report.

Gourock T.C.—Plans are in preparation for new municipal buildings.

Preston T.C.—The Health Committee have approved a scheme for the purchase of property and its conversion into a sanatorium and hospital. The estimated outlay is £2,000.

Salop C.C.—It has been agreed to promote a Bill for vesting the shire hall and Guildhall, Shrewsbury, in the council, and to authorise the payment to the Shrewsbury Corporation of £12,500 towards a scheme for providing new municipal buildings.

HOUSING AND TOWN PLANNING.

Arklow U.D.C.—A scheme has been adopted for the erection of 100 labourers' cottages.

Athy U.D.C.—It was reported at the council meeting recently that the Treasury had refused to grant a loan of £7,000, which had already been sanctioned, for a housing scheme on the grounds that it was not urgent. Mr. Deegan said the Local Government Board considered the housing question an urgent one. It was also mentioned that the council had formed a Distress Committee at the suggestion of the Local Government Board.

Billinge U.D.C.—The surveyor, Mr. A. Darlington, has received instructions to prepare a scheme for the erection of eight workmen's houses.

Bourne R.D.C.—Upon the application of the Rippingale Parish Council, the council have decided to erect four houses on two sites selected by the sub-committee and to build them of the better class, the clerk to make the necessary application for the loans, and ask for consent to transfer the loan now on hand from the Castle Bytham houses to those to be built at Rippingale.

Chard T.C.—The specification prepared by the borough surveyor, Mr. E. W. Hearn, for the erection of three houses in Old Town in connection with the council's housing scheme has been approved.

Weymouth T.C.—The Local Government Board has been asked to sanction a scheme for the erection of twenty-five workmen's dwellings.

Willington U.D.C.—The surveyor, Mr. J. H. Gardner, and the medical officer of health, having made a visit of inspection to the back-to-back houses in the district, submitted a recommendation that the whole of these be certified as unfit for human habitation. They also suggested that sixty houses should be erected by the council. The matter has been referred to the Works Committee.

REFUSE COLLECTION AND DISPOSAL.

Perth T.C.—The question of the introduction of a refuse destructor is again under the consideration of the town council.

ROADS AND MATERIALS.

Argyllshire C.C.—The council have decided to forward to the Road Board applications for grants in aid of improvement works proposed to be carried out in the various districts of the county, which are estimated to cost £9,332.

Barrow R.D.C.—It has been decided to make use of Quarrite in the main streets of villages in the district subject to the parishes expressing a desire that the roads should be repaired with a tar material.

Buxton U.D.C.—In the course of his half-yearly statement on road repairs, the surveyor, Mr. F. Langley, said that the average life of an ordinary macadam road in Buxton might be taken as seven years, and the cost per yard at 1s. 3d. Tarred basalt work cost 2s. per yard, and the total expenditure would be increased in ratio to the adoption of this class of roadway in each year. The life of the road, however, would be increased, and a saving in repairs and cleansing effected, which would ultimately justify the increased initial expenditure, and for this reason he urged that all level thoroughfares should be resurfaced as required in tarred basalt. He further stated that fully 10 per cent of the 30 miles of footpaths, formed in limestone asphalt, required resurfacing, and he advocated a loan of £2,000 for this purpose.—The council have approved the plans and estimates for two street improvements.

Colwyn Bay U.D.C.—Extensive schemes of road improvement are to be carried out at an estimated cost of £10,000.

Hants C.C.—The council have resolved to spend £6,300 in making good the roads near the military camps at Winchester and Lyndhurst.

Hipperholme U.D.C.—It has been agreed to carry out repairs in Badger-lane, St. Giles-road and Mytholmroad, and application has been made to the Road Board for a grant in aid of the estimated cost (£3,000 to £4,000). With regard to the main roads, communication was opened up with the county council and the Road Board, and those authorities agreed to bear the cost of improvements to the amount of £10,524, provided the work is completed within a year. The urban council have agreed to carry out the work by direct labour.

Holborn B.C.—The council have agreed to a proposition by the London County Council to acquire part of the Inns of Court Hotel for the purpose of widening High Holborn, provided the county council contribute half the nett cost. The total is estimated at £3,000.

Limavady R.D.C.—Subject to the Road Board sanctioning a grant of £2,250, and granting a loan of a similar sum, free of interest it is proposed to improve 6 miles of road from Downhill limeworks to Bellarena Station.

Pontypool U.D.C.—The Pontypool Park and new through main road scheme may now be said to have reached a final stage of approval. The Monmouthshire County Council have adopted the recommendation of the Main Roads and Bridges Committee to contribute one-third of the cost of constructing the new road through the park. The county authority's grant is not to exceed £4,500, and is subject to the sanction of the Local Government Board to a loan for the purpose. The Road Board has already promised a grant of £5,769, representing one-third of the estimated cost of the scheme (£17,306), and has undertaken, should the actual cost of the works exceed the provisional estimate, favourably to consider an application for an additional grant in proportion to the actual expenditure. Two other local authorities besides the Pontypool Council will also share the cost.

Ramsgate T.C.—A scheme has been agreed to for making up the footpaths of Boundary-road and paving the carriageway with wood blocks.

Rochester T.C. [illegible] and of main roads 1·33d. per square yard, 30,800 [illegible]

St. Pancras B.C. [illegible] road.

Southampton T.C. [illegible] foundations of a number of roads, and the council [illegible] cost, as well as £18,962 for improving the surface of such roads.

Tilbury U.D.C.—The surveyor, Mr. S. A. Hill-[illegible] construction of the road from Tilbury to the Orsett [illegible]

West Sussex C.C.—The county surveyor, Mr. H. W. [illegible] railways by the Government, there was extreme difficulty in obtaining road materials for carrying out the work embodied in the main Road Board scheme for the year, and that he had had an interview with the board's chief engineer, and had discussed the matter with him, with the result that it was suggested that a scheme of relief works, substituting road improvements and drainage instead of reconstruction involving the use of road metal, should be formulated and put into operation in the event of its being found to be impossible to carry out the original scheme. This suggestion was approved generally, and it was referred to the sub-committee to draw up a scheme in detail for submission to the Road Board.

SEWERAGE AND SEWAGE DISPOSAL.

Carlisle R.D.C. [illegible] Scotby and Cumwhinton, estimated to cost £7,100, has been referred to the consideration of the parish of Wetheral.

Clutton R.D.C.—The council have approved the scheme of the sanitary surveyor, Mr. R. S. Davey, for a sewage disposal scheme at High Littleton, and he has received instructions to draw up detailed plans, estimates and bills of quantities of the proposed works.

Crompton U.D.C. [illegible] out at Shaw Edge, at an estimated cost of £294.

Hinckley U.D.C.—The Local Government Board have written to the council stating that they could only [illegible] years, in the event of the main being ultimately required for the larger scheme of filtration. Otherwise the term would be limited to five years.

Honiton T.C.—It has been agreed to take up a loan of £4,650 for works of sewerage. The interest on the loan is 4½ per cent.

Mansfield T.C.—The borough surveyor, Mr. T. P. Collinge, has prepared a report in which he recommends various alterations and improvements at the sewage disposal works.

Surbiton U.D.C.—A statement of the cost of the new sewage disposal scheme has been prepared by the clerk, Mr. F. W. Wood, and the surveyor, Mr. H. T. Mather, and this shows that the total expenditure on the scheme was £86,689. Of this amount £1,352 was paid out of the sewer rate. The total of the original loans sanctioned and borrowed was £68,042, so that the excess expenditure incurred amounted to £17,295. The council decided to make application to the Local Government Board for sanction to borrow the amount of the excess expenditure, less the sum of £12,500 already sanctioned on account.

Totnes R.D.C.—While conceding that the sanitary condition of some of the parishes of the rural district is fairly satisfactory, the Local Government Board press upon the council the necessity for several improvements, such as the conversion of privy middens into pail-closets, a scheme of sewerage for Harbertonford, and a closer inspection of the yards and houses in South Brent.

WATER, GAS, AND ELECTRICITY.

Bradford T.C.—The Gas Committee have agreed to a scheme for a new gas-main [illegible] the Birkshall and Mill-street gasworks. The estimated outlay is £3,840.

Bourne R.D.C.—The council have agreed to purchase the local water undertaking with a view to providing a supply to the whole parish of Castle Bytham.

Bungay U.D.C.—Consideration is being given to a scheme for the construction of waterworks.

Cowes U.D.C.—The tender of Messrs. Glenfield & Kennedy, Kilmarnock, at £3,280, has been accepted for duplicate pumping machinery at the waterworks.

Dumbartonshire C.C.—For the improvement of the Vesper Level water supply the Western District Committee have agreed to apply to the county council for powers to carry out the following works—viz., laying larger pipes in certain districts, at an estimated cost of £3,950; laying a 14-in. main from Balloch Loan to the reservoir, at an estimated cost of £3,750; and the construction of [illegible] cost of £1,100.

Kidderminster R.D.C.—The Local Government Board have sanctioned the proposal of the council to carry out the necessary work for supplying the parish of Wribbenhall with water from the Bewdley waterworks.

Kirkconnel T.C.—The scheme for augmenting the Kirkconnel water supply, which includes the laying of a new track from Kello water to the present main at Kellobank, has now taken practical shape. Mr. James Ritchie, Dunfermline, has secured the contract for laying the main at an estimate of £2,622. The fixing of the mechanical filters and filtration plant has been entrusted to Paterson's Engineering Company (Limited) at £370, and the reinforced cement tank will be built by Gray's Ferro-concrete Contracting Company, Limited, at a cost of £479. The aggregate cost is estimated at £4,500.

Lanarkshire C.C.—The council have given notice of their intention to make application to the Secretary for Scotland for a Provisional Order for power to carry out an extension of the waterworks of the Middle Ward and for other purposes. The Order includes provisions for the construction of a service reservoir to the west of Airdriehead Farm, in the parish of Cumbernauld, and a number of aqueduct conduit lines of pipes connected with the proposed extension. It is proposed to extend the water supply so as to include portions of the parishes of Cumbernauld and Kirkintilloch in Dumbartonshire.

Llangollen U.D.C.—The council have instructed Messrs. [illegible] engineers, of Wolverhampton and Westminster, to report on the water supply of the town.

Macclesfield T.C.—The Gas Committee have decided to carry out extensions at the gasworks, at an estimated cost of £700.

Malton R.D.C.—The council have resolved to adopt a water supply scheme prepared by Mr. J. Hutton, engineer, for the following parishes: Broughton, Swinton, Amotherby, Appleton-le-Street, Barton-le-Street, Slingsby, Fryton, Butterwick, Brawby, Little Habton, Great Habton, Hilderdey, and High and Low Hutton. The estimated cost is £14,966.

Perth T.C.—It is proposed to effect extensions of the gas mains to Pitcairngreen and West Huntingtower, at an estimated cost of £500.

Redditch U.D.C.—The council recently decided to carry out an extensive scheme of reconstruction at the electricity works, involving an expenditure of £18,000. The Birmingham Small Arms Company subsequently approached the council asking for a supply of current for power purposes for ten years, the maximum demand amounting to 2,000,000 units per annum. To meet this increased demand a further sum of £10,000 is to be spent upon plant, bringing the total expenditure to £28,000.

Tenby T.C.—The Sanitary Committee have approved of the draft notice of the intention of the council to apply to the Board of Trade for a Provisional Order authorising an electric lighting scheme for the town.

MISCELLANEOUS.

Doncaster T.C.—The council have agreed to the provisions of the local Bill proposed to be promoted by the corporation in the ensuing Session of Parliament referring to the extension of the gasworks, gas area,

and gas clauses; streets improvements, streets, buildings, sewers, drains, infectious diseases and sanitary matters; the infectious diseases hospital; the Doncaster cemetery, new municipal offices, and other matters.

Skipton U.D.C.—It has been resolved to purchase a motor fire engine for the Fire Brigade at £45 15s., and to accept the quotation for same from Messrs. Stewart & Morton for the installation of 10 additional call bells and telephones similar to those in use at Bridlington.

PERSONAL.

Mr. J. W. Pike, surveyor to the Pontypool Rural District Council, has been appointed surveyor to the Holsworthy (Devon) Rural District Council.

Mr. Frank Sumner, M.INST.C.E., chief engineer to the Corporation of the City of London, has been granted a further three months' leave of absence on account of illness.

Lieutenant-Colonel W. Collingridge, M.A., M.D., F.R.C.P., the medical officer of health to the City and Port of London, was called to the Bar on the 17th inst. as a member of the Honourable Society of Gray's Inn.

Mr. G. E. Mitchell, sanitary surveyor and inspector of nuisances to the Clare, Suffolk, Rural District Council, has been voted ten guineas for the preparation of plans and specifications of workmen's dwellings at Rede, and the supervision of the scheme.

Mr. G. Gledhill, late surveyor to the Balby Urban District Council, whose area has been incorporated in the borough of Doncaster by the recent extension scheme, was recommended by the Doncaster Corporation meeting in committee for a salary of £300 per annum.

Mr. W. Laurie, late assistant county surveyor of Stirlingshire, has been appointed temporary county surveyor and engineer to the Western District Committee of the Perthshire County Council, in the room of Mr. W. L. Gibson, who has been gazetted a Lieutenant in the Scottish Horse.

Mr. G. A. Penwill, surveyor to the Peterborough Rural District Council, was, at the last meeting of that body, granted £100 for preparing and carrying out housing schemes in the parishes of Walton and Eye. He was also voted £20 a year towards the upkeep of a motor cycle, and is to receive 1½ per cent on all works costing over £200.

Mr. George Sheppard, late borough surveyor of Newark, died, we regret to announce, on Saturday last. Mr. Sheppard, who was a native of Newark, was appointed borough surveyor in 1876, and resigned in June, 1912, when he was appointed consulting surveyor. He was a partner in the firms of Messrs. Sheppard & Pink, auctioneers and valuers, and Messrs. Sheppard & Lockton, architects.

Mr. G. Bertram Kershaw, M.AM.SOC.C.E., has terminated his appointment as engineer to the Royal Commission on Sewage Disposal, and has taken [illegible] Victoria-street, Westminster, with a view to devoting the whole of his time to a private practice, embracing sewerage, sewage purification and disposal, treatment of trade wastes, and river pollution problems. Mr. Kershaw has had a very wide and varied experience in all matters relating to sewage and trade wastes. Formerly assistant to Messrs. John Taylor, Sons & Santo Crimp, he has for the past sixteen years been engaged to the Sewage Commission, whose ninth and tenth (final) reports are now on the eve of publication; he has carried out work both in this country and abroad, and has been engaged to report upon [illegible] Mr. Kershaw's text-book on "Modern Methods of Sewage Purification" has had a wide circulation at home and abroad, and his latest book on "Sewage Purification and Disposal" (Cambridge Public Health Series) is one of the [illegible] will be published very shortly.

Institution of Civil Engineers. A paper entitled "Concreting in Freezing Weather and the Effect of Frost upon Concrete" will be read by Mr. J. Hammersley-Heenan, ASSOC.M.INST.C.E., at a meeting of this body on Tuesday evening next.

Asphalting.—The order for the asphalting at the extensions to the National Gallery under H.M. Office of Works has been placed with Claridge's Patent Asphalte Company, Limited, of 3 Central Buildings, Westminster. This firm also have in hand the asphalting of the offices for the New Zealand Government, 143-146 Strand, and Royal Mews, Buckingham Palace.

Institution of Municipal Engineers.—Mr. R. J. McKenn, hon. secretary of the North-Western District of this institution, writes that he has arranged for a visit to be paid to the flag-making department and electricity works of the Salford Corporation on Saturday, December 12th. The flag-making works are a new undertaking, and are worked in conjunction with a branch of the destructor works at Salford. The electricity works are full of interest, and the new turbo-generator which has been installed, and which is capable of developing 5,000 k.w., will be in operation. The Mayor of Salford and the respective committees of the above departments have offered to provide tea at the Salford Town Hall, and to give the members the use of the Mayor's Banquet Chamber for a social which will be held in the evening, and which will be attended by his Worship.

Housing Loans.—In the House of Commons on Tuesday, Mr. Lloyd George stated, in reply to a question, that in view of the exceptional conditions now prevailing and cost of building, the Treasury would, in the case of local authorities, be prepared, under the Housing (No. 2) Act, to make advances for schemes approved by them on the recommendation of the Local Government Board or Board of Agriculture on the following terms: 10 per cent of the approved capital cost by way of free grant, the remaining 90 per cent by way of loan with interest at 4¼ per cent per annum, to be repaid by equal annual instalments of interest and principal combined within the period usually authorised for the works of the nature of those for which the loan was required. On a sixty years' loan the authority would thus pay for each £100 of approved capital cost an annuity of £4 3s. 1d.

FOR OTHER ADVERTISEMENTS

See End of Paper.

BOROUGH OF CHELMSFORD.
BOROUGH ENGINEER'S DEPARTMENT.

Applications are invited for the following appointments:—

(*a*) Temporary Junior Draughtsman; salary 25s. per week.

(*b*) Temporary Clerk; salary 20s. per week.

Previous Municipal experience desirable, but not essential.

Applications, in candidate's own handwriting, stating age and experience, and accompanied by not more than three recent testimonials, endorsed "Temporary Draughtsman" and "Temporary Clerk" respectively, to be sent to the undersigned on or before Wednesday, 9th December, 1914.

PERCIVAL T. HARRISON, A.M.I.C.E.,
Borough Engineer.

Chelmsford.
November 25, 1914. (2,120)

WEST SUFFOLK COUNTY COUNCIL.

Applications are invited for the appointment of a General Clerk in the County Surveyor's Department, to take charge of the clerical work of the office during the period of the war. Applicants must be expert shorthand writers and typists, and preference will be given to one having experience in a surveyor's office.

Applications, in candidate's own handwriting, stating age, salary required, and enclosing copies of three recent testimonials, and endorsed "General Clerk," to be sent to the County Surveyor, Shire Hall, Bury St. Edmunds, before 10 a.m., 7th December, 1914. (2,118)

WANTED temporarily during the continuance of the War, an Assistant in the Office of a Surveyor to a County Borough. Must be a good draughtsman, with knowledge of Surveying and Levelling. Applications to be sent, with copies of three recent testimonials, and stating age and salary required, to Box 1,491, office of THE SURVEYOR, 24 Bride-lane, Fleet-street, E.C. (2,123)

COUNTY BOROUGH OF CROYDON.

SEWAGE WORKS EXTENSION—SOUTH NORWOOD FARM.

UNDERDRAINAGE TILES.

Notice is hereby given that the Council are prepared to receive Tenders for the Supply of about 1,000 square yards of Underdrainage Tiles for the New Percolating Filters at the Sewage Disposal Works, South Norwood Farm.

Conditions, Particulars, Specification, and Form of Tender may be obtained at the Borough Engineer's Office, Town Hall, Croydon, upon payment of a deposit of One Guinea, which will be returned upon receipt of a *bonâ-fide* Tender.

Tenders, on the prescribed Form, to be sent to me by eleven o'clock in the forenoon of Monday, the 7th day of December, endorsed "Tenders for Underdrainage Tiles—South Norwood Farm."

Tenders will only be received subject to the terms of the draft Contract deposited at my Office, and which may be inspected during office hours.

The Council will not be bound to accept the lowest or any Tender.

JOHN M. NEWNHAM,
Town Clerk.

Town Hall, Croydon.
November 24, 1914. (2,125)

KIDDERMINSTER RURAL DISTRICT COUNCIL.

WRIBBENHALL WATER SUPPLY.

The above Council are prepared to receive Tenders for the Construction of about Three Miles of Cast-iron Water Mains, principally of 4 in. and 3 in. diameter, together with the necessary Bends, Branches, Sluice Valves, Hydrants, Meters, Meter Chambers, and other work incidental thereto.

Plan and Sections of the proposed works may be seen, and Specification and Bill of Quantities obtained from the Offices of the Engineer to the Council, Mr. William Fiddian, F.S.I., Stourbridge, on and after the 30th inst., on deposit of a cheque for Three Guineas, which will be returned on receipt of a *bonâ-fide* Tender with the Specification and the Bill of Quantities duly priced in.

Two approved securities will be required for the due performance of the Contract.

The Council do not bind themselves to accept the lowest or any Tender.

Sealed Tenders, endorsed "Tender, Wribbenhall Water Supply," to be sent to the undersigned not later than noon on the 14th proximo.

(By order)
F. E. BURCHER,
Clerk to the Rural District Council.

Kidderminster.
November 25, 1914. (2,116)

KIDDERMINSTER RURAL DISTRICT COUNCIL.

CHURCHHILL WATER SUPPLY.

The Kidderminster Rural District Council invite Tenders for the Provision, Laying, and Jointing of about 1,587 yds. of 3-in. Cast-iron Water Mains, together with Meters, Valves, Hydrants, and other Fittings; the Construction of Meter Chamber, and other Incidental Works, in accordance with the Drawings and Specification prepared by the Engineer.

Drawings and Specifications may be seen, and Bills of Quantities and Form of Tender obtained at the Office of the Engineer G. J. Shepherd, 85 Chester-road Kidderminster on or after the 1st day of December 1914 on payment of a deposit of Two Guineas, which will be refunded on receipt of a *bonâ-fide* Tender and the return of all Documents to the Engineer.

Sealed Tenders, endorsed "Churchill Water Supply," to be delivered at my Office not later than Twelve o'clock noon on the 14th day of December, 1914.

The Council do not bind themselves to accept the lowest or any Tender.

F. E. BURCHER,
Clerk to the Kidderminster Rural District Council.

Bank Buildings, Kidderminster.
November 25, 1914. (2,117)

EPSOM URBAN DISTRICT COUNCIL.

The above Council invite Tenders for the following works At their Sewage Farm, Hook-road, Epsom.

Contract No. 1. Additions and alterations to the Destructor Buildings, Engine-room, &c., with Air-compressing Machinery and Sewage screening Apparatus.

Contract No. 2. Refuse Destructor.

Contract No. 3.—Two Hydrolytic Tanks, alterations to Settling Tanks, laying of Cast-iron Mains, construction of Ejector Station and Carriers.

Plans and Specifications may be seen and Quantities and other particulars obtained on payment of a deposit of Three Guineas for each set of Quantities (which will be returned upon receipt of *bonâ-fide* Tenders) upon application to Mr. Edward R. Capon, Surveyor, Bromley Hurst, Church-street, Epsom, on or after Monday, November 30, 1914.

Sealed Tenders, endorsed "Eleventh Asylum Scheme," "Contract 1, 2, or 3," as the case may be, to be delivered to the Clerk to the Council, "Duncannon," Church-street, Epsom, before 7.30 p.m. on the 15th day of December, 1914.

The Council do not bind themselves to accept the lowest or any Tender.

E. G. WILSON,
Clerk.

November, 1914. (2,121)

SLEAFORD RURAL DISTRICT COUNCIL.

WORKS OF WATER SUPPLY.

The Council hereby invite Tenders for Providing and Laying of about Six Miles of 4-in., 3-in. and 2-in. diameter Cast-iron Mains; Construction of a Brick Tower; Cast-iron Reservoir, and other Works of Water Supply, for the Parishes of Ewerby, Evedon, Haverholme Priory, Kirkby-la-Thorpe and Anwick.

Plans may be seen, and Bills of Quantities with Form of Tender obtained from Mr. W. B. Marsden, Engineer and Surveyor to the Council, at 74 Southgate, Sleaford, on or after the 4th December, upon making a deposit of £2, which will be returned on receipt of a *bonâ-fide* Tender.

Tenders will be received by me, endorsed "Ewerby and Anwick Water Supplies," not later than the 24th December, 1914. The Council do not bind themselves to accept the lowest or any Tender.

ERNEST H. GODSON,
Clerk to the Council.

Northgate, Sleaford.
November 25, 1914. (2,122)

CITY OF BIRMINGHAM.

COAL-GAS TAR.

The Public Works Committee are prepared to receive Tenders for the Supply of about 1,500 tons of Coal gas Tar to be delivered during the coming Spring and Summer to various Corporation depots within the City, by boat, rail, or road, as circumstances permit.

Tenders may be given for the whole quantity of 1,500 tons, or any less quantity.

Specification and Form of Tender may be obtained at the Office of the undersigned, where Tenders, endorsed "Tenders for Tar," are to be delivered by Tuesday, 15th December, 1914. The Corporation do not bind themselves to accept the lowest or any Tender.

HENRY E. STILGOE, M.INST.C.E.,
City Engineer and Surveyor.

The Council House, Birmingham.
November 25, 1914. (2,119)

BOROUGH OF CHEPPING WYCOMBE.

The Corporation invite Tenders for the Construction of a Ferro-concrete Bridge on the Hennebique system, and the laying of a short length of Sewer and Surface-water Drain.

Plans and Specification may be seen, and Form of Tender and Quantities obtained, on payment of One Guinea, at the office of the undersigned, to whom Tenders, endorsed "Desborough-avenue Extension," must be delivered not later than January 5, 1915.

T. J. RUSHBROOKE,
Borough Engineer and Surveyor.

Borough Surveyor's Office,
Easton-street,
High Wycombe.
November 25, 1914. (2,124)

Concrete Institute.

PROF. HENRY ADAMS' PRESIDENTIAL ADDRESS.

[illegible] Prof. Henry Adams [illegible] This was in accordance with the custom which had obtained in the institute since its foundation, but in these democratic days he was doubtful whether such [illegible] was consonant with the trend of public opinion. He would rather see the nomination of president and vice-presidents submitted to the vote of the general body of the members. This matter was under the consideration of the council, and he hoped that the various alterations in the Articles of Association [illegible] which the members all over the world could take part in the elections, not only of the chief officers, but also of the council generally.

The [illegible] to say, in a very flourishing condition. There were at present on the roll sixteen honorary members, 933 ordinary members, twenty-seven associate members, six associates, fifty-one students, and five special subscribers. Although the numbers were for the present satisfactory, it must be remembered that there was a constant outflow due to deaths and resignations, and that merely to maintain the *status quo* about fifty new members were required each year. With a young and progressive institute like this there ought to be no difficulty whatever in doubling this number, and as the influence of the institute and its capability for benefiting its members increased with every addition to the membership, it was to be hoped that efforts would not be slackened until the 2,000 was reached.

The unfortunate war now in progress had already had the effect of checking building enterprise, and it might be some considerable time before a recovery took place; but, beyond this, the call of the nation for volunteers to join our Army and take part in the defence of our coasts must have a depressing effect upon the membership roll, and it would be no cause for wonder if there should be a temporary falling off.

Their financial position was satisfactory, although last year their expenses exceeded their income by a small amount. The annual subscription, notwithstanding it having been increased, was still below the average of other institutions, but the council considered that it would be sufficient to carry on the ordinary work and leave a small margin for developments. When their funds increased there were many useful directions in which they could employ the surplus.

A library was in course of formation, and a catalogue would shortly be issued. The new methods of construction were developing so rapidly that a constant study of the literature of the subject was necessary, and the council wished to give every facility to the younger members to improve themselves at a minimum cost. Naturally, some of these younger members were too diffident to join in the discussion at the ordinary general meetings, and the council had therefore inaugurated a series of informal monthly meetings for the junior members only, at which a member of the council took the chair, and friendly discussions ensued upon a subject announced beforehand, or upon a short introductory lecture given by one of the members. As far as possible the activity which characterised the last year's work would be fully maintained during the coming year; but the war must affect the institute and the work of its members in one way or another, so that, without endeavouring to foresee the ultimate results, I would say that for the present their motto was, "Business as usual."

THE LONDON REGULATIONS.

"The extreme importance of the official 'Regulations for the Use of Reinforced Concrete' in London, in the preparation of which this institute, with other bodies, was consulted, has," Prof. Adams continued, [illegible] of time and anxious thought to the discussion of the various propositions during the last five years. While they desired to place no difficulty in the way of sufficiently safeguarding the public in the use of this method of construction, they were, on the other hand, in duty bound to their members to see that no unnecessary restrictions were placed upon it. For the first time in history the authorities have suggested an alteration in the laws of mechanics in order to provide against bad workmanship, and I cannot help thinking that this is a mistaken method of securing safety, and in any case the formulæ should have been relegated to an appendix. What would be thought if, in the Steel-frame Building Regulations, incorrect bending moment formulæ were given by which the girders were to be calculated to compensate for insufficient riveting to resist shear? In that document results only are stipulated for, the stresses being assumed to be calculated by the ordinary laws of mechanics.

"In M. Bélelubsky's paper on 'The Bending Moments of Beams with Various Degrees of Fixity,' the matter was summed up as follows: 'It appears obvious to me that an engineer or architect who may be called upon to apply regulations concerning reinforced concrete should have sufficient knowledge of the laws of mechanics to be able to deal with the various problems which he may have to study; and to oblige him to follow certain formulæ would practically imply that he is incapable of exercising proper control of any scheme or problem in reinforced concrete which he may have to consider.'"

They were probably well aware that the actual distribution of stress in a complete structure could only be approximately estimated, and that reliable data for constructional work could only be slowly gathered by extended experiments and minute measurements of the induced strains, which took both time and money; but until we have more precise knowledge he maintained that if we adopted the accepted laws of mechanics we should not go far astray. He must not say any more about these Regulations at present, as they were still *sub judice*, but he did hope that when they appeared they would be in a form to command respect as well as compliance. He would, however, just add that in the last proof that had been received, out of eighty-seven suggestions made by this institute, sixty-five had been adopted, and there was some ground for hoping that the final revision would include a good proportion of the outstanding [illegible] Hon. Secs. were assured that facilities would be given for revision from time to time after the Regulations have been tested in practice.

LESSONS FROM FAILURES.

If the Concrete Institute had emphasised one thing more than another in connection with the materials the members were interested in, it was the necessity for the best possible workmanship and the utmost care in supervision. The majority of the failures that had occurred have been due to improper materials or careless workmanship. Part of the secret of good work was good pay for it. Where labour was cheap the output was poor both in quality and quantity.

"In my remarks upon the subject at the International Congress of Architects eight years ago I paraphrased," the president continued, "the old saying that 'Nothing succeeds like success' by 'Nothing succeeds like failure,' because I believe that a proper study of failures will do more than anything else to ensure success. In 1912 the Concrete Institute formed an 'Investigation Committee' for the purpose of studying failures as they occurred, but the natural desire of all parties concerned to hush up the failures has prevented the committee so far from doing much useful work, unless the fact of its existence acts as a bogey to frighten the careless operative. It may be well to remind you that a schedule has been drawn up for recording the details of such failures as are brought to the notice of any member, and all such schedules are treated as confidential by the committee unless permission is given by the parties concerned to make public use of them. It is the misfortune of engineers that their success-

meet freely within the walls of our institute lies undoubtedly in the fact that the subjects discussed have similar interest for both. There is a sort of neutral zone in reinforced concrete construction where the engineer and architect are equally at home, and this alone renders our institute unique in its membership.

"The scientific principles of reinforced concrete and structural mechanics are now so well known that the failures due to ignorance on the part of the designer are conspicuous by their absence, but frequently there are failures reported which are due to the formwork being badly designed and fixed or removed too early. Too often these matters are left to the foreman carpenter, and however conscientious he may be, his goodwill is no substitute for experi- [illegible] an exceptionally good motto for us and our work. Near Auburn, California, a reinforced-concrete bridge in three spans was under construction towards the end of last year. The work was being rushed day and night by the contractors in order that it might be finished before the river rose, and on the night of November 4th the formwork under one end span collapsed, allowing the whole mass to fall, killing some of the workmen and injuring several others."

In engineering works, such as reservoir dams, other causes of failure had been found, one of the most remarkable of which was the action of alkali on concrete. Where junctions occurred between successive portions of the work, a leakage was most likely to take place, and if any alkali existed in the earth resting against the wall which the leakage could reach, a very rapid disintegration of the concrete was found to take place.

A DIFFICULTY.

A curious objection had been taken to building in reinforced concrete, which was that it was so difficult to pull down. It was frequently said that it cost more to destroy a building than it did to put it up.

"It must be admitted that this method of building does not lend itself readily to alterations, and although I have not personally come across a case where this has been a serious matter, there is a recent instance in Germany where some concrete vaults which had to be removed cost twice as much to destroy as they had cost to build. In some other cases it has been found that only by recourse to blasting operations has it been possible to break up the work in this material, but the imperishable character of the structure and the small cost of upkeep are really very great points in its favour. Their inherent strength and the nature of their stability render these buildings peculiarly suitable to withstand vibration, and even earthquake, whereas ordinary construction is only stable while at rest, and the slightest earth tremors may have a disastrous effect."

Brickwork was one of the best fire-resisting materials, but a building cannot be erected in brickwork alone, and considerable loss of life had occurred in fires from the walls falling, as they ceased to receive the support of the floors and roofs. Reinforced concrete, on the other hand, could be used not only for the walls, but for the floors and roofs also, and the steelwork, which was often the cause of the greatest danger in a brick building, was so protected by the concrete that the fire had practically no effect upon it. Limestone must not be used in the aggregate, as that burnt to pure lime in a fire and swelled and disintegrated when water came upon it. Coke breeze as an aggregate was found to stand fire well in the experiments made by the British Fire Prevention Committee, and for that reason had been largely used by architects; but coke breeze had sometimes a deleterious effect upon the steel reinforcement, and was liable to swell in damp situations or if water reached it. An indication of the value of reinforced concrete was given in the fact that a lower premium is asked by the Fire Insurance Committee for buildings in this material provided the floors were not less than 5 in. thick and the walls not less than 6 in. thick.

EARLY TROUBLES.

It was interesting to look back upon some of the troubles that faced the early workers in reinforced concrete, and to see how such troubles had been surmounted. [illegible] in the early days of reinforced concrete building was the occurrence of cracks in the finished work. Some of these were undoubtedly due to over-limed cement and to coarse grinding, but the improvement effected by the publication of the Standard Specification of Portland Cement and the endeavour of manufacturers to keep up with it, and even to surpass it, had virtually eliminated this cause of trouble.

"A still frequent cause of cracking is shrinkage upon the drying out of the moisture, but a remedy for this has been found in what is called 'temperature reinforcement,' which consists of the insertion of light rods—say ¼-in. diameter and not more than 12 in. apart—in the opposite direction to the main reinforcement and near the surface, whereby the shrinkage, being confined within these limited areas, is so slight as to be invisible. Other causes are sudden changes of thickness, changes in the composition of the concrete, local currents of air upon the concrete while setting, insufficient reinforcement allowing deformation to occur, &c. Where the new surface is exposed to the sun the changes of temperature are apt to cause 'crazing,' particularly where the surface skin is richer in cement than the body of the work. The best remedy for this is, perhaps, to brush the surface with hydrochloric acid and then wash it with clear water.

"Another cause of early difficulty was the uniformity in size of the larger aggregate. When the maximum of 1½ in. was reduced to 1 in. it was thought that this would be effective in producing solid concrete capable of being packed closely round the reinforcement; but tests showed that it was necessary to grade the aggregate from ¼ in. to ¾ in. to make sure of obtaining a solid concrete without voids, and in perfect contact with the steel. In the same way the sand was found to produce better work when it was not of uniform size, but graded from $\frac{1}{10}$ in. to $\frac{3}{16}$ in. As the cement has to envelop every particle of the aggregate, and cement one to the other, the grading involves the use of a smaller quantity of cement as the voids are small, and also reduces the waste of aggregate as nothing but dust has to be thrown away."

EXPERIMENTAL WORK.

Much valuable work had been practically lost because of the difficulty of co-ordinating experiments made with different materials under varying circumstances. An important suggestion had been made by one of their members—Mr. John A. Davenport—that for some time to come all experiments on reinforced-concrete beams, columns, and similar structural members should be made on a standard steel and a standard concrete. By "standard steel" was meant one having a particular ultimate strength, yield point, elongation and contraction; these could vary between limits, but the variation should be kept small. By "standard concrete" is meant one made of one particular coarse material, one particular sand, and one particular cement, always mixed in the same proportion with the same amount of water. The coarse material should always have the same sizes and grading, and the sand should likewise have definite sizes and grading, which must always be the same. We should then be able to decide definitely many of the points which were the subject of lengthy discussions during the preparation of the Local Government Board regulations—for example, what constituted fixed ends to beams, what width of floor slab should be taken as the flange of a T-beam, what was the actual economy of double reinforcement, how far a concentrated load might be considered to have spread by the time it reached the reinforcement, the comparative value of vertical and inclined shear stirrups, adhesion between the concrete and the reinforcement, the economical value of deformed bars, &c.

After referring to the fact that a Joint Committee of the Concrete Institute and the Quantity Surveyors' Association had prepared a synopsis of a "Standard System of Measurement for Reinforced-concrete Work" which would greatly facilitate uniformity in the preparation of bills of quantities, and reduce the risk of errors of misunderstanding and consequent disputes, the president went on to remark that the council had in hand a standard specification for reinforced concrete which was nearing completion, and that if more uniformity in drafting specifications for such work could thereby be obtained, there would be more certainty in the tendering and a greater absence of sporting items.

PREPARATION OF DESIGNS.

It might be useful to consider what was the usual method followed in procuring the design for the structural parts of a municipal building, and whether the system could be improved upon. The writer was for a number of years engaged in preparing schemes for municipal buildings, and the usual practice was to obtain from the client a list of the rooms required, with their approximate areas, and the number of doors and windows, and positions of stairways, lifts, &c., running up the building, and the height of each floor. He then obtained designs and estimates from a certain number of firms who devoted themselves to this class of work, but were each identified with a particular detail of construction, and, selecting the offer which he considered the most suitable and economical, completed his own [illegible] for approval. Now the question arises, Does this method lead to economy? The designs submitted, being competitive, are naturally based upon the minimum requirements of safety, and leave no margin for accidental errors or faulty material or workmanship, and, even if the utmost care possible be given to the work, I do not intend this as any reflection upon the skill or honesty of the specialists who as a rule [illegible] but it is not in human nature to provide more than the bare necessity of the case demands when the success of the tender depends upon the cost being kept down to a minimum. The Institution of Civil Engineers has recently issued a circular deprecating the preparation of designs in competition. As a consulting engineer, I may perhaps be biassed, but I am of opinion that collaboration between the architect and the structural engineer is the preferable course, so that a single design may be prepared upon which contractors may tender upon a common basis. Against this it is often said that engineers' designs are expensive, and that there is no advantage in calling in an independent expert to prepare the design; but I think it will generally be found that the additional cost is due solely to a larger amount of reinforcement than appears in competitive designs, with the result that the building gains in greater stability."

There was another aspect of the case, and that was that when several designs were submitted the cost of the unaccepted designs had to be met somehow. It increased what they might call the establishment charges, which must be met by a percentage added to the actual cost of all work, and the only advantage appeared to be that with many men working upon the same scheme some one among the many might evolve a better result than one man alone would be likely to do.

LOCAL GOVERNMENT BOARD'S ATTITUDE.

The Local Government Board were responsible for retarding the progress of reinforced concrete to a very great extent. Many structures that would have been put up in that material had not even got so far as the design, because of the known opposition of the Board and the heavy expense thrown upon the promoters by reason of the short period for which a loan would be granted. They had fixed no actual periods for loans for the various classes of work, as each case was considered on its merits, having regard to the purpose of the work and its position, but they would [illegible] in contact with water to thirty years in the floors of a building.

If there were any reasonable doubt as to the probable duration of reinforced-concrete structures in general, the council of the Concrete Institute would be the first to know it, but they had the evidence of their own personal investigations that it exceeded fifty years, and they did not hesitate to advise its use where that was not hampered by the consideration of a loan through the Local Government Board. When the Eddystone Lighthouse was pulled down in 1884 a bundle of iron rods which had been accidentally left in the concrete foundation in 1757 (127 years) was found to be in perfect condition, and one would have supposed that was in a sufficiently exposed situation to prove the safety against corrosion.

"Within my knowledge," continued Prof. Adams, "the construction of a large reinforced-concrete seaside pier was quite recently abandoned after completion of the designs because the Local Government Board would only allow ten years for the repayment of a loan for its construction. In another case the Local Government Board refused to allow more than ten years for the repayment of a loan of £10,000 for a reinforced concrete storage tank. The tank was then [illegible] for the same amount, £1,750 [illegible] thirty-five years for the annual payment, making the annual charge £880, as against £1,233 which would have been required for the less costly tank on the ten years' basis. Had twenty-five years been granted in the first case, the annual charge would only have been £640.

"Fortunately, there are many cases that do not depend upon official mercy. A sea wall, 300 ft. long, in reinforced concrete has just been erected at Carnarvon by the Harbour Trust in extension of an existing masonry wall, to afford increased wharfage for oil-tank steamers and to reclaim about 2 acres of the foreshore. The existing heavy masonry structure, 20 ft. high from shore to coping, rested on a foundation 6 ft. below shore level, and it was [illegible] to construct the [illegible] in a similar manner. There were many ingenious features in the design carried out, but the point I want to make is that the cost of this work in reinforced concrete was about £2,000, while the lowest tender for a masonry wall was £4,600. The corrosion of the reinforcing rods when the concrete is in contact with water, fresh or salt, continuously or intermittently, is only possible under exceptional circumstances."

STRUCTURAL ENGINEERING.

So much had been said lately about structural engineering, and so many persons seemed to be in doubt as to what was meant by it, that he should like to devote a short time to its consideration.

It was a great mistake to suppose that it consisted of steel-framed buildings only; that was merely one branch of a very large subject. Reinforced concrete was another branch—a very large one, and possibly the main stem, at least for them. These two forms of construction would in the future, so far as they could foresee, constitute the chief work of the structural engineer; but buildings in other materials—wood, stone and brick—came under the head of structural engineering when the chief object is stability. Bridges, towers, jetties, retaining walls, roofs, tanks, reservoirs, dams, and many other structures would come under this classification, and it was to enable them to deal with all these in their papers and discussions that the council had endeavoured to broaden the scope of the Concrete Institute. Bridges alone should be a fertile subject. So many examples had now been completed in reinforced concrete that they could form a fair idea of the value of that mode of construction. It had a distinct advantage over brickwork and masonry in being able to resist tensile stresses and changes of compression and tension due to rolling loads.

No one type was predominant, but the arch entered into most of them. An arch was not only a pleasing form of construction, it was based on sound scientific principles, and was an economical disposition of material.

"I have considerable doubt whether it is desirable to construct hinged arches in this material, whether two-hinged or three-hinged. It appears to me that it is almost equivalent to using simply supported girders when you have the opportunity to make them continuous. There is, of course, the advantage that the line of thrust must pass through the hinges, but there is no difficulty in so proportioning an ordinary fixed arch that the line of thrust nowhere unduly leaves the thickness provided. It may be said that no one knows the exact course of the line of thrust, but we know that Nature takes the course of resisting a load with the minimum of stress, and we shall not be far wrong if we take the line of thrust so that the extreme stresses on the opposite haunches are as nearly equal as possible. The favourite method of construction seems to be a flat or cambered floor with cross and main beams and pillars from the main beams to the arch itself, the arch being a continuous sheet or ribbed sheet; when the latter the pillars are braced transversely, and the arch is stiffened by a repetition of main and cross beams similar to those under the bridge floor. In this work, as in all arches, it is necessary to provide rigid abutments, but reinforced concrete will withstand a shifting abutment better than any other material."

ROAD BRIDGES.

The general movement that had taken place throughout the kingdom to improve the high-roads had not gone so far as it might have done in the direction of improving the existing bridges. As reinforced concrete was such an admirable mode of construction

classes. They collected information from all parts of the country as to the weights and dimensions of the usual traffic, and decided what maximum loads each class of bridge should be rated to carry. Their labours would be able to produce a single chart that would reduce the draughtsman's labour to a minimum.

In his concluding observations the president stated that the Science Committee had for a long time past endeavoured to gather useful information upon the driving and supporting power of reinforced-concrete piles, but so far they had not been able to collect sufficient material for a report. Records of the weight and fall of ram, number of blows, and distance driven were very numerous, but comparatively useless. Sometimes the records were accompanied by particulars of a test, when the pile sustained a given load without yielding, but whether it would have yielded with ten or twenty times the test load they had no means of knowing. What was required was a series of experiments with small piles—say, 10 in. square, 20 ft. long—driven 15 ft., and then loaded until they sank farther. That would do for a beginning, and would enable them to compare reinforced-concrete piles with timber piles. He had a collection of about forty formulæ for the latter kind, all more or less unreliable, but none at all for the former.

Reinforced concrete had been the means of saving a considerable expenditure of money in the cost of foundations otherwise than by piling. By enabling the pressure to be spread over a considerable area, without much doubt it had, in many cases, enabled buildings to be safely erected upon soil that would have defied the old method of putting in foundations. Concrete rafts had been used for a long time, but until they were reinforced it was not uncommon to find the heavily loaded parts punching their way through the concrete. Perhaps the greatest innovation was possible in connection with bridge foundations, which were often very deep—100 ft. or more below high-water mark.

At the meeting of the Concrete Institute at which Prof. Adams delivered his address a vote of thanks was proposed by Mr. E. P. Wells, seconded by Sir Henry Tanner, past-presidents, supported by Mr. E. Fiander Etchells.

In the course of the proceedings eight members, the same number of associate-members, four associates and one student were elected.

Public Health Law.—This concise little work* has been prepared mainly for the use of all concerned in local government work who may find the larger books too elaborate. In twenty chapters it covers the ground sufficiently for its purpose, including such matters as highways, but omitting rating, elections, &c. For students it should be of assistance in preparing for examinations in Public Health Law, while the practitioner will find its arrangements well suited for easy reference.—*The Law Times.*

St. Andrews Cleansing Department.—In a report on the cleansing department the burgh surveyor of St. Andrews, Mr. Watson, stated that the cost for the carting in 1912 was £382; in 1913 £329; and in 1914, £609—equal to an average of £457. The expenses in the last year had been largely due to misfortune with three of the horses, one of which died, and two were off work for a total period of 283 working days. As a result of this extra horses were temporarily hired. Taking the years 1912 and 1913 the average annual expenditure in the cleansing department under the present system was £381. Were the council to revert to the former system the annual expenditure in the cleansing department might be anything from £366 to £440. If therefore there was not to be a recurrence of the misfortunes of 1914, the present system was the better from the financial point of view. There was also a great advantage in having the whole work of the cleansing department under the direct control of the town. There would therefore appear to be no reason for reverting to the old system.

* A Manual for Municipal and County Engineers and Surveyors, Town Clerks, Clerks to District Councils, and other officers and members of local authorities. By S. G. Turner, of the Middle Temple, Barrister-at-Law, A.M.I.C.E., &c. London: St. Bride's Press, Limited. Price 10s. 6d.

ARTERIAL ROADS IN GREATER LONDON.

REPORT OF SECTIONAL CONFERENCES.

A report of the [illegible] on the subject of arterial roads in Greater London was issued by the Local Government Board in addition to the minutes of the [illegible] between [illegible] representatives of [illegible] meeting several times in [illegible]. The report contains a précis of replies to questions put to the Royal Institute of British Architects and the London Society [illegible] to which replies were received to the latter, and a note as to the future work of the conferences.

The two bodies referred to are in agreement that [illegible] and future traffic, the observations of the London Society being as follows:—

Roads within the County of London should be considered as a separate problem to that presented by the roads in outer districts. Traffic necessities ought not to dominate the approaches to a capital city. Liberal space should be provided at all intersections to meet traffic requirements. A great deal of widening and alteration of existing roads might be avoided by systematic examination of good relief roads.

The proposals of London Traffic Branch of the Board of Trade are generally approved, subject to alterations in the line and direction which are submitted as alternative suggestions. The proposals are generally based on reliable data and are well considered.

Town planning schemes likely to facilitate the [illegible] and connecting of open spaces in their proper relationship to arterial roads. Low-lying land and railways should be specially considered in this connection. Enlargement of [illegible] at road junctions desirable. Building lines should be well set back to allow free planting.

Desirable that town planning schemes should be prepared. Powers should be [illegible] for all expected extensions of railway stations.

Width of arterial roads should be settled on definite principles. Main traffic roads should be 80 ft. wide, secondary roads 40 ft. wide, and residential roads 25 ft. wide, with 40 ft. width of air space.

While agreeing as to the general observations of the London Society, the Royal Institute of British Architects suggests that where land is not too costly space should be secured for grouped masses of trees and subsidiary planting or for continuous avenues. In regard to the widths of proposed roads they consider that the latter should be proportioned to the volume of traffic that will probably utilise them, and that increased width of road should be secured by offering reductions in the width of minor roads provided adequate distance is secured between the house frontages.

The Roads Improvement Association also takes the view that the existing roads are inadequate for existing and future traffic.

The Commercial Motor Users' Association submitted a memorandum indicating certain matters that will require consideration in connection with the designing of roads for purposes of passenger transport. The Surveyors' Institution offered no comments on the list of questions. The Commons Preservation Society, the District Surveyors' Association, the Institution of Municipal and County Engineers, the Co-partnership Tenants, Limited, and the Garden City and Town Planning Association have not yet been able to decide upon their replies, but may be regarded as having the matter under consideration.

In his observations on the reports of the London Society and the Royal Institute of British Architects, Colonel Hellard agrees generally with the introductory remarks of both. Though he also agrees as to the desirability of various [illegible] recommended in different sections, he states that he would urge the imperative necessity for dealing first with work on the outskirts.

[illegible] of the conferences.

As to the future work of the conferences the report says:—

"Having regard to the situation created by the war, the sub-committees have considered the desirability of postponing the arrangements for visiting the sites and altering the dates provisionally fixed in November for the meetings of the conferences.

"One reason suggested for postponement was that it might not be possible for all, or a majority, of members of the sub-committees to give sufficient time and attention to the matter under the present circum-

stances. It might also be the case that, in view of the national emergency, only perfunctory consideration could be given to the various questions and proposals, especially if there was little likelihood of there being any practical result of the labours of the conference until after the end of the war.

"As against this it was suggested that there was a good deal to be said for the view that ordinary duties should be carried on as far as possible at such a time, and that, if the work of the conferences and sub-committees was entirely suspended, it might be difficult to reawaken interest in it when the time became more opportune for its revival. Moreover, it had to be considered that there was likely to be a large amount of distress due to falling off in the employment of unskilled labour; that this distress might be much more acute nine months or a year hence than it is likely to be this winter, and that if it should be of such character that the employment of large bodies of men on relief works became a necessity in Greater London, the making or improving of roads might be regarded as the best means of providing such employment.

"The sub-committees felt, therefore, that if this necessity should arise the conferences should be in a position to make definite recommendations regarding some of the most important roads at least, so as to be ready with a scheme. It is necessary in the first place to proceed with the settlement of the lines of the roads; secondly, with the preparation of any plans which are necessary to make the scheme clear and intelligible; and thirdly, to prepare estimates of the probable cost, so that when the time is ripe an application can be made to have one or other of the proposed roads constructed as a means of relieving distress.

"With regard to the conferences to be held in November the sub-committees have decided that it is desirable to postpone these until the sub-committees are in a position to present their reports.

"A large number of the replies sent in by local authorities and associations have been received. The full consideration of these replies, of the many alternative proposals for making new roads and widening and improving existing roads, and the inspection of the areas affected by these proposals are matters which require most careful investigation.

"The decision of the sub-committees, therefore, is to proceed with the work forthwith, but to do it deliberately and exhaustively, with a view to making any recommendations as definite as possible."

INSTITUTION OF MUNICIPAL ENGINEERS.

President Mr. HORACE BOOT, M.I.E.E., M.I.MECH.E., Tunbridge Wells and Westminster.

President-Elect Mr. W. H. MATTHEWS JONES, City Engineer and Surveyor, Chester.

ANNUAL MEETING IN LONDON.

The sixth annual general meeting will be held in London, to-morrow (Saturday).

PROGRAMME.

11.45 a.m.—Meet in the Council Chamber, No. 4 Southampton-row, London, W.C.

12 noon.—Annual general meeting.
Minutes of last meeting.
Presentation of annual report of council.
Announcement of result of ballot for election of council for the year 1914-15.
Any other business.

1 p.m.—Adjourn for lunch.

2.30 p.m.—Re-assemble in Council Chamber.

2.45 p.m.—Presidential address.
Discussion on the following papers to be presented to the meeting:—
"A Plea for the Better Remuneration of Municipal Surveyors and Inspectors of Nuisances in Small Urban and Rural Districts," by G. Belson Chilvers, M.R.SAN.I. (member).
"Housing of the Working Classes," by Edward Whitwell (member).
"The Future Control and Maintenance of Rural Roads," by J. S. Wooddisse (member).

B. WYAND,
Secretary.

39 Victoria-street, S.W.

INSTITUTION OF WATER ENGINEERS.

WINTER GENERAL MEETING.

The nineteenth winter general meeting (being the fourth statutory annual general meeting of the institution) will be held at the apartments of the Geological Society, Burlington House, W. (kindly lent for the purpose by the president and council of that body), on Friday and (if necessary) Saturday, December 11th and 12th. Proceedings will commence at 2 p.m. on Friday and 11 a.m. on Saturday.

The following papers will be read and discussed:—

(1) "Notes on Scraping a 15-in. Trunk Main at Batley," by J. C. Barrowclough, waterworks engineer.

(2) "The Whitton Pumping Station of the Ipswich Corporation Waterworks," by C. W. S. Oldham, corporation water engineer.

Advance copies of these papers will be sent to those wishing to take part in the discussions. Early application should be made by those intending to be present at the meeting, to whom alone they can be sent.

PROGRAMME.

(1) The minutes of the nineteenth ordinary summer meeting, held at Stockport, will be read and submitted for confirmation.

(2) The statement of accounts for the year 1913 (see "Transactions," Vol. xviii., pp. 282-283) will be submitted for formal adoption by the members.

(3) The ballot will be taken for the election of the council for the year 1915-16.

(4) The president, on behalf of the council, will move: "That Messrs. Wood, Drew & Co. be and are hereby appointed auditors to the institution for the year at a fee of five guineas, and that Messrs. Herbert Lapworth, D.SC., and Arthur Valon be and are hereby elected honorary auditors to the institution for the same period."

(5) The president will move: "That the members present at this meeting do confirm the decision of the council to subscribe from the accumulated fund of the institution a sum of fifty guineas to the Prince of Wales' War Relief Fund and a sum of twenty guineas to the funds of the Red Cross Society."

(6) Reading of papers and discussions thereon.

PERCY GRIFFITH,
Secretary.

20 Victoria-street, S.W.

ASSOCIATION OF MANAGERS OF SEWAGE DISPOSAL WORKS.

President Dr. MACLEAN WILSON, D.SC.

ANNUAL GENERAL MEETING.

The annual general meeting of this association will be held at the Holborn Restaurant on Thursday, December 10th, at 3.30 p.m.

The chair will be occupied by Dr. Samuel Rideal, D.SC., F.I.C., F.C.S.

BUSINESS.

Read minutes of last meeting.
Chairman's report.
N.A.L.G.O. delegates' report.
Balance-sheet.

Resolution of council:—
"That the council recommend the association, at the annual meeting, to pay a contribution of £25 from the funds of the association to the Prince of Wales' National Relief Fund."

Presentation of an illuminated address to Mr. Chas. H. Ball, M.R.SAN.I.

Paper to be read by Mr E. Ardern, M.SC., Manchester, "A Recent Development of the Sewage Problem."

The council at their meeting on October 21st decided that, in view of the state of national affairs, the annual dinner should not be held this year.

J. B. CROLL,
Hon. Secretary.

Coast Sand Dunes (By Gerald O. Case, St. Bride's Press, Limited, 24 Bride-lane, E.C., price 5s.).—The rapid increase of sand wastes around our coasts is indeed a serious one, and Mr. Case has done a valuable work in the writing of this book.—*Southport Guardian.*

APPOINTMENTS VACANT.

OFFICIAL AND SIMILAR ADVERTISEMENTS RECEIVED UP TO 4.30 P.M. ON THURSDAYS WILL BE INSERTED IN THE FOLLOWING DAY'S ISSUE, *but those responsible for their despatch are recommended to arrange that they shall reach* THE SURVEYOR *office by noon on* WEDNESDAYS *to ensure their inclusion in the weekly list of summaries. Such advertisements may, in cases of emergency only, be telephoned (City No. 1046) subject to later confirmation by letter.*

ASSISTANT COUNTY SURVEYORS.—November [illegible] County Council. £140—£200.—Mr. Christopher L. Cowlard, clerk, County Council Offices, Bodmin.

ARCHITECTURAL ASSISTANT. [illegible] —Morley Corporation. £3 per week.—Mr. F. Turner, borough engineer and surveyor.

SURVEYOR.—December 5th.—Pontypool Rural District Council. £100 per annum.—Mr. T. Watkins, clerk, Club Chambers, Pontypool.

TEMPORARY ASSISTANT AND DRAUGHTSMAN.—December 10th.—Shoreditch Borough Council. £2 10s. per week.—Mr. T. L. Hustler, borough engineer, Town Hall, Old-street, E.C.

INSPECTOR OF NUISANCES.—December 11th.—Wirral Rural District Council. £125 per annum.—Mr. J. E. S. Olive, clerk, 54 Hamilton-street, Birkenhead.

CITY ENGINEER AND SURVEYOR.—January 31st, 1915.—Port-of-Spain Corporation. £725, inclusive of travelling allowance.—Mr. Joseph Arnold Lamy, town clerk, Town Hall, Port-of-Spain, Trinidad, B.W.I.

DRAUGHTSMAN CLERK.—Survey Department of the East Africa Protectorate. £160—£205, and house allowance £40.—Crown Agents for the Colonies, 4 Whitehall-gardens, London, S.W.

MUNICIPAL COMPETITIONS OPEN.

OFFICIAL AND SIMILAR ADVERTISEMENTS RECEIVED UP TO 4.30 P.M. ON THURSDAYS WILL BE INSERTED IN THE FOLLOWING DAY'S ISSUE, *but those responsible for their despatch are recommended to arrange that they shall reach* THE SURVEYOR *office by noon on* WEDNESDAYS *to ensure their inclusion in the weekly list of summaries. Such advertisements may, in cases of emergency only, be telephoned (City No. 1046) subject to later confirmation by letter.*

SOUTHEND.—December 4th.—Schemes for a tuberculosis hospital, for the corporation. Premiums £100, £50, and £25.—Mr. E. J. Elford, borough engineer.

BEDS.—December 7th.—Designs for a secondary school for girls, for the Bedfordshire County Council.—Mr. W. W. Marks, clerk, County Council, Shire Hall, Bedford.

DUMFRIES.—December 31st.—Competitive plans for workmen's dwellings, for the Dumfries Corporation.—Town Clerk.

LIVERPOOL.—February 8th.—Designs for working-class dwellings, for the corporation. Premiums, £100, £50, and £25.—Mr. E. R. Pickmere, town clerk.

MUNICIPAL CONTRACTS OPEN.

OFFICIAL AND SIMILAR ADVERTISEMENTS RECEIVED UP TO 4.30 P.M. ON THURSDAYS WILL BE INSERTED IN THE FOLLOWING DAY'S ISSUE, *but those responsible for their despatch are recommended to arrange that they shall reach* THE SURVEYOR *office by noon on* WEDNESDAYS *to ensure their inclusion in the weekly list of summaries. Such advertisements may, in cases of emergency only, be telephoned (City No. 1046) subject to later confirmation by letter.*

Buildings.

NORTHWICH.—November 30th.—For the erection of six houses, for the rural district council.—Mr. E. T. Ward, Brockhurst-street, Northwich.

AYLESBURY.—November 30th.—For the erection of a ward and bath-room at the isolation hospital, for the urban district council.—Mr. W. H. Taylor, engineer and surveyor, Town Hall.

GLAMORGAN.—November 30th.—For building a boundary wall, school extension, and other works, for the county council.—The Architect, Metropolitan Bank Buildings, Neath.

GOWER.—November 30th.—For the construction of a sea wall 380 yds. in length, for the rural district council.—Mr. G. A. James, surveyor, Fairfield, Three Crosses, Dunvant, Glamorgan.

HOLMFIRTH.—November 30th.—For the construction of a reservoir and laying cast-iron mains, for the urban district council.—Messrs. J. Barrowclough & Sons, engineers, Cross-roads, Holmfirth.

DURHAM. [illegible] —For the erection of a pavilion at the sanatorium, for the county council.—County Surveyor, Shire Hall, Durham.

GOSFORTH.—December 1st.—For the erection of [illegible] urban district council.—Mr. G. Nelson, surveyor.

MANCHESTER.—December 2nd.—For the erection of a school, for the Education Committee.—Accountant, Education Offices, Deansgate.

ABERTILLERY.—December 2nd.—For work of school extension, for the Education Committee.—Mr. W. H. Hiley, architect, Chapel-street, Abertillery.

MANCHESTER.—December 2nd.—For the construction of a retaining wall, for the gas department.—Mr. F. A. Price, superintendent, Town Hall.

IPSWICH.—December 3rd.—For the erection of a boiler-house, for the corporation.—Mr. J. R. Mead, borough engineer and surveyor.

BRIGHTON.—December 3rd.—For the erection of a hostel, for the Education Committee.—Messrs. T. Simpson & Son, surveyors, 16 Ship-street, Brighton.

ROCHDALE.—December 4th.—For the erection of a school, for the Education Committee.—Mr. P. W. Hathaway, Town Hall.

NORTH RIDING.—December 4th.—For the erection of a combined cookery and handicraft room, for the Education Committee.—County Education Offices, Northallerton.

SHORTLANDS.—December 4th.—For the construction of a pumping station and contingent works, for the Metropolitan Water Board.—Chief Engineer, Savoy-street, Strand, W.C.

FARNHAM.—December 5th.—For the erection of a porter's lodge and discharging wards, for the Committee of the Farnham Joint Isolation Hospital.—112 West-street.

BILLINGE.—December 7th.—For constructing a borehole for water supply purposes, for the urban district council.—Mr. A. Darlington, clerk, Council Offices.

HANTS.—December 7th.—For the erection of a school, for the county council.—Mr. A. L. Roberts, architect, The Castle, Winchester.

SHEFFIELD.—December 7th.—For the erection of a school medical department, and alterations to a school building, for the Education Committee.—City Architect, Town Hall.

ARKLOW.—December 7th.—For the erection of 100 houses, for the urban district council.—Mr. L. O'Toole, Main-street, Arklow.

STAFFS.—December 8th.—For the erection of a council school, for the county council.—Mr. Graham Balfour, director of education, County Education Offices, Stafford.

BARNES.—December 8th.—For building a dispensary and tuberculosis wards at the hospital, South Worple Way, for the urban district council.—Mr. G. Bruce Tomes, surveyor.

ST. THOMAS.—December 10th.—For the construction of waterworks, for the rural district council.—Mr. S. R. Lowcock, 6 Queen Anne's-gate, Westminster, S.W.

PEMBROKE.—December 10th.—For the erection of a school, for the Education Authority.—Mr. O. T. Thomas, architect, County Education Offices, Haverfordwest.

NORTHWICH.—December 10th.—For the erection of a school, for the Administrative Sub-committee of the Northwich District.—Mr. A. E. Powles, architect, 7 Winnington-street, Northwich.

SOUTHEND.—December 14th.—For the erection of an electricity sub-station and incidental works, for the corporation.—Mr. E. J. Elford, Municipal Buildings.

WEST RIDING.—December 18th.—For the erection of a school, for the Education Committee.—Education Architect, County Hall, Wakefield.

SPALDING.—December 19th.—For building six cottages, for the rural district council.—Messrs. Davis & Cowley, architects, 6 Double-street, Spalding, or 2 York-row, Wisbech.

EAST STOW.—December 30th.—For the erection of working-class dwellings, for the rural district council.—Mr. H. E. Wilkes, clerk, Council Offices.

The Surveyor

And Municipal and County Engineer.

Vol. XLVI DECEMBER 4, 1914. No. 1,194.

Minutes of Proceedings.

Private Street Works: Premises Extra Commercium

The evolution of the principle by virtue of which the owners of premises *extra commercium* are exempted from liability for private street works expenses affords an interesting illustration of law in the making. There are, of course, the well known statutory exemptions relating to churches, chapels, churchyards and burial grounds, railways and canals. But the general exemption of *extra commercium* premises is a corollary which the Courts have deduced from the statutory definition of an "owner." It will be remembered that sec. 4 of the Public Health Act, 1875, defines an "owner" as "the person for the time being receiving the rack rent of the lands or premises . . . or who would so receive the same if such lands or premises were let at a rack rent." In 1883 the effect of the definition was considered with reference to the parapets of a bridge carrying a road over a deep cutting of the Great Eastern Railway, and having their foundations in the railway company's land. In the ordinary sense of the word the company were undoubtedly the owners of the parapets, and if they were ever let at a rack rent it would be the company who would receive it. But inasmuch as the bridge and parapets had been built in fulfilment of a statutory obligation and for public purposes, the parapets never could be let. To quote from the judgment: "The bridge is by the statute dedicated to public use, and its fence walls are provided for public protection; and if the ownership and control of the walls is in the company it is so for public purposes, and subject to the obligation of perpetual maintenance, unless and until some other good and sufficient fences shall be provided by the company in their stead for the public protection. The company could not let the walls at a rack rent, and if they might use them for any purpose it must be a use subordinate to the public purposes to which the bridge as a structure is in its whole devoted." In these circumstances the House of Lords held that the railway company were not "owners" within the statutory definition, and were therefore not chargeable with private street works expenses (*Great Eastern Railway Company* v. *Hackney District Board*, 8 A.C., 687). It will be seen that in this interpretation rather a large assumption is made—viz., that the definition is restricted to premises which are capable of being let at a rack rent. Taking the words of the Act in a strictly literal sense, it is arguable that that assumption is unwarranted. At the same time it is probable that the decision accords with the real intention of the Legislature, or what would have been their intention had such a case been present to their minds in framing the definition.

In applying the principle established by this case, however—viz., that there cannot be a statutory "owner" of premises incapable of being let at a rack rent—the alleged incapacity of particular lands or premises has been in several cases very narrowly scrutinised, with the result that the "first fine careless rapture" of the Great Eastern Railway Company has not always been recaptured. The definition of "owner" in the Metropolis Management Act, 1855, is similar to that in the Public Health Act. But when the Vestry of St. Mary, Islington, contended that they were not the statutory "owners" of a London square which they had bought and covenanted to use solely as a public garden, the Court "distinguished" their case from that of the railway company, and decided against them (*Vestry of St. Mary, Islington*, v. *Cobbett*; 1895, 1 Q.B., 369). And when the Herne Bay Urban District Council raised a similar contention with respect to a recreation ground which they had covenanted to keep open for the use of the public for ever, they met with the same fate (*Herne Bay Urban District Council* v. *Payne*; 1907, 2 K.B., 130). So also it befell the owner of a strip of land 263 ft. long, but only 4 in. wide, the site of a fence which he was under covenant to maintain for ever (*Williams* v. *Wandsworth District Board of Works*, 13 Q.B., 211). The reason for this distinction is that in these three cases the incapacity of the premises to yield a rack rent was imposed, not by Act of Parliament, but only by covenant. Now a covenant may be released by agreement between the respective parties thereto, or their representatives, and in the event of this being done the land might be let. Therefore the incapacity to yield a rack rent is not absolute and irrevocable, because it can be removed by the mere act of the parties. On the other hand, an incapacity imposed by statute can be determined by nothing short of another statute. Probably, as a matter of fact, the chance of the release of the covenant is about as remote as that of the repeal of the Act, but the Courts have seen fit to take the possibility into account in the one case and to ignore it in the other. This would seem to be an exception to the rule "*De minimis lex non curat.*"

* * *

Institution of Municipal Engineers.

Although it was not found possible, owing to the prevailing circumstances, to hold the annual meeting of the Institution of Municipal Engineers this year in the new president's "town of origin," those members who assembled for the business meeting in London on Saturday last were privileged to hear an excellent address of a very practical character from Mr. W. H. Matthews Jones, the city engineer and surveyor of Chester, who has just assumed office. Mr. Matthews Jones dealt with a variety of topics, and as he refrained from overloading his address with unnecessary detail, he was able to cover a very wide field. Of the matters which come

before the municipal engineer in the course of his ordinary duty, more especially of greater experience in drainage. Mr. Jones pointed out that the engineer who deals fault with bad workmanship is rarely doing a good turn to the building owner, which is unfortunately in many cases not appreciated, and he suggested that owners should be protected by their contracts that such work should be taken out and relaid at the expense of the builder. This is no doubt sound advice in the cases to which it applies, but the trouble usually occurs in regard to speculative work, where, in the absence of any sub-contract, the building owner and builder are one and the same person. In such circumstances the attentions of the surveyor are naturally not very welcome, although they must be persisted in, even if the offender is—as is only too frequently the case—also a member of the council. We are convinced, however, that supervision will never be thoroughly satisfactory or really effective until the surveyor has the advantage of some measure of security of tenure.

Dealing with the making of new streets for modern road traffic, Mr. Jones referred to the heavy burdens which are now placed upon the shoulders of the ratepayer to meet the demands for road maintenance. In this respect Chester has a special grievance, inasmuch as its roads are constantly being damaged by an enormous volume of through traffic flowing from Liverpool, Manchester, and the North of England to Wales. Speaking from this experience, Mr. Jones expressed his firm opinion that granite setts properly laid on a solid foundation will surely come back as the most cleanly and lasting street or road surface paving that can be had, and that if such paving is tar-sprayed or tar-painted, and the joints well filled up, it becomes almost noiseless. Further, he made an interesting reference to some experiments which he has been carrying out in the construction of armoured concrete roads, which, he was able to state, had up to the present, given the greatest possible satisfaction. One other matter dealt with in the address may be referred to—namely, the removal of trade refuse. It appears that in Chester all trade refuse is removed free of charge, the object apparently being to avoid the controversy which may arise in certain cases, if a charge is made, as to whether particular items are "house" refuse or "trade" refuse. The question is one which causes considerable difficulty in some districts, inasmuch as the general power to remove refuse conferred by the Public Health Act, 1875, is limited to the removal of "house" refuse. Power to remove "trade" refuse, however, coupled with a right to make a reasonable charge for so doing, may be acquired by the adoption of sec. 48 of the Public Health Acts Amendment Act, 1907.

* * *

Salaries in Small Districts.

The question of the underpayment of surveyors in small districts is one upon which we have frequently expressed our views, and we observe with satisfaction that it formed the subject of a paper at the annual meeting of the Institution of Municipal Engineers last Saturday. Many good points were made both in the paper—which was read by Mr. G. Belson Chilvers, surveyor to the Oundle Urban District Council—and in the course of the subsequent discussion. Mr. Chilvers made a plea for a minimum annual salary of £120—surely not an extravagant demand for whole-time professional services. Starting with this minimum, he advocated the adoption of a sliding scale based upon population, area, rateable value, and the duties to be performed, and suggested that provisions to this effect should be inserted in any Bill which is promoted for obtaining superannuation and security of tenure. It must be borne in mind, however, that the President of the Local Government Board has already indicated that if these advantages are to be obtained, they must be coupled with a proper standard of professional qualification. Two subsidiary questions were mentioned—namely, the combination of a low salary with the right to undertake private work, and with the right to take pupils. The first is open to the objection that an officer may find that he has to act at once on behalf of a building owner and the council, and although he would probably exercise the greatest care in such a case not to take any advantage of his dual capacity, the position is essentially a false one, which no professional man ought to occupy. As regards pupils, if they are taken as a means of increasing an inadequate salary, the evil is merely being perpetuated by the creation of an abnormal supply of potential applicants for future appointments. The solution of the problem is not easy, but the cardinal points are that a reasonable minimum wage should be paid without resort to artificial means of increasing the ordinary salary, and that nothing should be done to lower the standard of qualification.

Liverpool's Novel Street Lighting Scheme.

A new departure in street lighting is contemplated by the Liverpool Corporation, and the experiment will be watched with interest by those concerned with local administration all over the country. According to the *Liverpool Post* it is intended to inaugurate at an early date a scheme of acetylene gas lighting for the suburbs of the city. In connection with the project we are reminded that the Liverpool Corporation have been engaged upon the construction of sections of a great highway destined eventually to encompass the city on all sides save that bounded by the Mersey, and to be called Queen's-drive. When completed, this road will be some 15 miles in length, while the widths will vary from 80 ft. to 120 ft. or more. Naturally the question of the safety of the pedestrian in crossing such roads has engaged the serious attention of the corporation, and it has been decided to introduce the acetylene lighting scheme at various points in Queen's-drive where thoroughfares converge, and other places where the volume of traffic would seem to call for extra precaution. Standard-posts, 4 ft. or 5 ft. high, and coloured red, are to be provided, and will bear small lamps, which at night will display through four lenses turned to the various quarters of the compass "a brilliant but concentrated light." The standards will contrive to serve a double purpose. First, they will act as "caution" indicators to the drivers of vehicles; secondly, by being placed upon small "islands" of raised pavement, they will direct the attention of pedestrians to the existence and locality of the refuges, and thus help them to cross the thoroughfare in security. We are told that the low elevation of the standards was determined by the consideration that they will thereby be rendered distinctive from the ordinary signposts and illuminants. It is, in fact, purely a protective scheme, supplementary to the existing lights, and in this respect it possesses the merit of originality and novelty. Its success or non-success are, of course, issues which only the future can decide.

* * *

Wiltshire Main Roads.

For some time past the Wiltshire County Council have had under consideration the question of the desirability of themselves undertaking the maintenance and supervision of the main roads at present repaired under contract by the rural district councils. Writing on the matter about

three months ago, we ventured to take exception to a speech made in the council by one of the members, who, instead of debating the matter as one of policy, made the discussion the opportunity for an attack upon the thirteen district surveyors *en bloc*. His allegation was that the county surveyor had been complaining for a long time past that the supervision of the roads was entirely inadequate, and that there was no one to see that the men were earning the wages which they were paid. We observe that at the last meeting of the council there was presented by the Roads and Bridges Committee a report, in which it was recommended that no change should be made in the present system, but that the attention of the district surveyors should be called to the need for further supervision. In the face of this report, however, the same member returned to the charge, and on this occasion was guilty of an inaccuracy of some consequence in stating that "forty-three county councils out of forty-eight in the Kingdom had adopted the plan suggested" by the county surveyor. The plan in question provides for supervision by twenty road foremen in charge of small districts under the direct supervision of the county surveyor. We are not discussing the merits of such a proposal, but we say without hesitation that it is not one which has been adopted by forty-three county councils, being essentially different from supervision by district surveyors on the staff of the county surveyor. If there has been any slackness of supervision in certain districts in the past, it is to be hoped that the defaulters will take the hint offered in the report of the Roads and Bridges Committee.

New Book on Town Planning.

"We ought to study many towns before we attempt to lay out a new one; we ought to study our own town very carefully before we plan its extensions." These words from the preface afford a key to the aim of Mr. Julian Julian, B.E., borough surveyor of Cambridge, the author of an excellent little book which has just been published.* The work in question is not so much a guide to the Act of Parliament as an attempt to deal with the principles of town planning, to indicate some of the subjects to be investigated, and to suggest some of the problems to be solved. The first two chapters are historical, and deal respectively with ancient town planning and mediæval and modern town planning. Next comes a chapter on authorities and by-laws, which concludes with an argument for conferring on local authorities a discretionary or dispensing power. A general account of the powers of local authorities follows, together with an important and suggestive chapter on practical considerations in the preparation of town plans. The final chapter contains an account of a town planning tour in Great Britain, France, Portugal, Switzerland, Germany, Holland, and Belgium, the places visited in the last-named country including Louvain and Liége. There are many books on town planning, but none which covers quite the same ground that this one traverses so ably. Mr. Julian's work will form a valuable addition to the town planner's library.

* * *

Wood Paving and Climate.

The comparative immunity of wood pavements in Europe from many of the troubles which usually accompany the use of this material in America has led Mr. S. R. Church, an American engineer, to inquire into the reasons for this phenomenon. The absence of slipperiness is accounted for by the fact that in both Great Britain and France a softer wood than the long-leaf yellow pine of America is used. As regards "bleeding" the British climate is favourable, owing to the extreme rarity of very hot weather; while as regards Paris it is said that there is not enough oil in the blocks to render them liable to this evil. Excessive expansion and buckling, however, are the principal sources of difficulty, and in this respect our freedom from trouble is accounted for by the high average humidity of our climate. In America a period of extreme heat and drought may absorb practically all the moisture from a wood pavement, and be followed by torrential rains. These conditions cause a sudden expansion to take place, with the resulting evils. Moreover, it is said that, from the point of view of avoiding excessive expansion, the kind of wood used in this country is superior to that used in America. Mr. Church concludes with an interesting tribute to European workmanship, expressing the view that "pavements in Europe are laid and maintained by men who have more conscience, or at least take greater pride in their work than we find on the average job in our country."

* * *

Effect of Frost on Concrete.

The paper which was read by Mr. John Hammersley-Heenan at the last meeting of the Institution of Civil Engineers was divided into two sections. In the first the author dealt with the precautions to be taken in the execution of concrete works in freezing weather, with special reference to Canadian practice. The conclusion arrived at was that concrete will not be damaged by frost if it has first had a chance to set for about two days under favourable conditions. To effect this it is necessary not only to devise some means of mixing the concrete with materials freed from frost, but also to place it in the forms before it has commenced to freeze, and to protect it and keep it warm for the period named. The latter part of the paper was concerned with the important question of the effect of frost upon concrete, the investigation of which is rendered doubly troublesome by the difficulty of deciding in individual cases whether corrosion is due to frost or faulty workmanship. From the information available, however, Mr. Hammersley-Heenan is of opinion that concrete exposed in air in a dry locality need not be affected by frost any more than good building stone, and probably it will stand much better; concrete always submerged under water is protected, and need cause no anxiety, but concrete alternately melted and frozen must be protected. An abstract of the paper will be found in another column.

* * *

Works Projected for 1915.

On January 29th next will be published the customary Special Annual Issue of The Surveyor, a prominent feature of which will be a comprehensive list of the works projected by local authorities for 1915. Those of our readers who propose to respond to the request we have made to them for particulars of such proposals will greatly oblige by forwarding their returns without delay. The form which these should take is now generally understood, but the exact nature of the information sought can be seen by reference to our issue of January 30th last, some thirty-six pages of which were devoted to the publication of these official forecasts. Any other material which readers may consider sufficiently interesting for inclusion in the issue will be welcomed, and this matter also, particularly if its use involves the reproduction of photographs or drawings, should likewise reach us at the earliest possible moment.

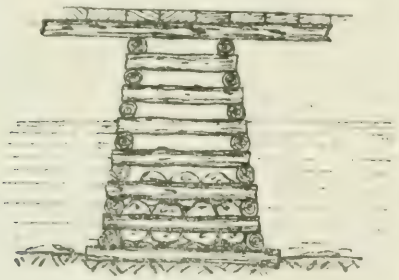
* "An Introduction to Town Planning." Price 6s. nett. London: Charles Griffin & Co., Limited.

Temporary Bridges.

By G. BERTRAM HARTREE, F.S.I., Engineer and Surveyor to the Alton, Hants, Urban District Council.

In connection with military surveys the author has been consulted by the Military in regard to the strength of the bridges to be utilised and his proposals for dealing with extraordinary loads.

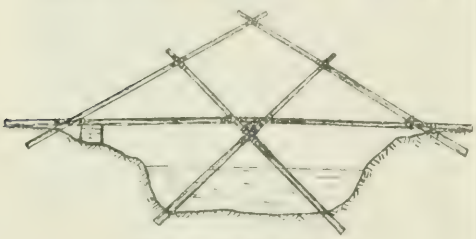
In designing and erecting temporary bridges, the two important points to be considered are the materials and their quality, and the skill to provide for economy of time and the possibilities of the position concerned. For work involving cordage the special class of builders' labourers known as scaffolders are necessary. For the timberwork it is very probable that wheelwrights and the



Cribwork.

[illegible] would be more suitable than joiners or house carpenters. The materials most likely to be at hand are timbers, ropes, dogs and spikes, and possibly the type and quantities of these will be an all-important factor in settling the design.

A minimum width of 9 ft. for roadway should be provided—in no case may it be less than 8 ft. This allows for infantry in fours, cavalry two abreast, and vehicles passing in one direction. Should a double [illegible] probable, where sling and



Span not Exceeding 18 ft.

similar bridges are constructed, that two bridges 9 ft. wide may be more effective than a single width of 18 ft. Guard rails or ropes are necessary, especially for horse traffic—a writer, describing the operations in the Chitral campaign, states that it was found necessary to fix bushes along the edges of bridges before driving cattle over.

With shallow watercourses the simplest substitutes for piers are stout posts driven in the bed of [illegible] may be found useful, or a form of crib construction may be adopted.

Other substitutes include wagons and carts, or weighted cylindrical vessels securely fixed in the form of a pile of shot. With suitable materials at hand, piers consisting of cribwork may be utilised. This consists of squared or round timbers, the latter roughly squared at "passings," and the various members fixed by bolts and "dogs." When supplying the latter, in addition to the common form that has spikes at both ends and on the same plane, a certain number should be provided with spikes at each end; but while the one is vertical, the other is horizontal, technically known as "bitches." A batter of 2 in. per foot in height is necessary; a tray is formed in bottom, as shown, so that the pier may be towed to position and weighted by large stones and sunk.

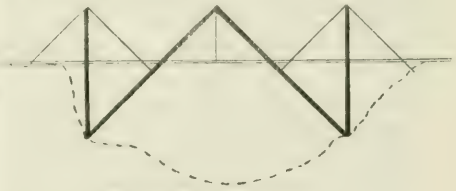
An X-shaped support can be constructed out of scaffold poles, as shown in sketch. This is suitable for spans not exceeding 18 ft.

For larger spans sling bridges may be adopted. The diagrams show members in compression, thick

Single Sling Bridge.

lines; tension, thin lines; cross strain, double lines. The single sling bridge is suitable for spans up to 45 ft. in four bays; for larger spans, up to 60 ft., stiffening would be required, and six bays are necessary. Over 60-ft. and under 80-ft. span may be bridged by a treble sling with stiffeners.

For all bridges planks or chesses 1½ in. or 2 in. thick should be provided and placed abutting edges crosswise; for wheeled traffic longitudinal planks are required in addition. Baulks or longitudinal supports for transverse planks are required, five in number per 9 ft. of road, these should be 7 in. by 3 in.,



Single Sling Stiffened.

or 6½ in. in diameter. The average length of bays is 12 ft., and a camber $\frac{1}{30}$th span is necessary.

In calculating loads on piers, &c., a dead weight of 90 lb. per lineal foot of bridge may be allowed for the superstructure, and in addition a live load of 5 cwt. per lineal foot per 9 ft. in width for infantry in fours. The weight of cavalry two abreast is 3¾ cwt., and a bridge carrying either of the foregoing is suffi-

Trefle Sling Stiffened.

cient for field guns and ordinary wheeled carriages connected with a military force.

In calculating the strength in cwts. of rectangular beams for live loads, the formula $C\frac{bd^2}{L}$ may be adopted. C equalling—larch 1, fir 1·3, cedar 1·4, beech

1·6 cub. ft. per cub. yd., and 2·4 cub. ft. per sq. yd. respectively. Assuming a factor of safety of about 3, a beam 12 inches deep by 6 inches wide would span 10 feet.

CONCRETING IN FREEZING WEATHER, AND THE EFFECT OF FROST UPON CONCRETE.*

By John Hammelesley Holman, Assoc.M.Inst.C.E.

In cases where it is found upon to carry out work in concreting during the winter it has been found that the methods of operation which were satisfactory in the summer will need considerable modification to suit winter conditions.

Concrete work, especially the lighter forms of reinforced concrete, used in building construction needs [illegible] and supervision. As a result of [illegible] experience gained during the last few years, it can be said that the freezing of concrete will not damage it if it has had a chance to set [illegible] twenty-four hours (or about two days). The effect of the freezing is simply to delay the process of hardening, which will again proceed under suitable conditions, and will eventually attain its full strength. If concrete is frozen before it has commenced to set, it will not be injured if precautions are taken to prevent it from freezing again after it thaws, until it is sufficiently hardened to withstand the effects of subsequent freezing. The alternate freezing and thawing during the process of setting [illegible] the damage.

To meet the foregoing conditions, which carry out concrete work in winter, it is necessary to devise means of mixing the concrete with materials freed of frost, placing it in the forms before it has commenced to freeze, and then protecting it and keeping it warm for about two days. After that it may be allowed to freeze without fear of its being damaged.

In the case of concrete in mass, or large bulk, it is not necessary to apply artificial heat, as the large body of concrete will generate sufficient heat during the process of hardening to enable the mass to set; all that will be necessary is to protect the outside of the concrete so as to keep the heat in. This can best be done by covering the concrete with clean straw.

For light sections of concrete, such as in reinforced concrete, poured at a temperature not below 22 deg. Fahr., some engineers allow salt to be used in a proportion not exceeding 10 per cent. There are many arguments for and against its use. The author prefers not to use it, except in marine works when the concrete is mixed with sea-water and the salt is admitted in that form. He has found that, instead of using salt, good results will be obtained for temperatures that do not fall below 22 deg. Fahr. by heating the water with a steam-hose taken from the mixer-boiler, and when necessary placing a few coke or wood fires on the heaps of sand and crushed stone, the usual precautions being taken to protect the concrete when in the forms, as described later.

For lower temperatures than those referred to above greater precautions must be taken to heat the ingredients by means of steam coils or radiators.

The concrete having been mixed, and the portion of the work to be carried out decided upon, the floor immediately below it should be partitioned off with tarpaulins, and coke stoves arranged under the floor slab, allowing about one stove to every 800 sq. ft. of floor space. All loose dirt and snow must be removed from the forms with brooms, and a steam hose should be applied to remove all ice and frost, the steam playing continuously over the forms in advance of the concrete, thus warming them in readiness for the concrete. The concrete should be poured quickly and continuously, and as each section is completed a tarpaulin may be drawn over it, supported on wooden strips about 6 in. above the surface of the concrete. In most cases this protection will be sufficient, but during very cold weather it will sometimes be found necessary to form a sort of tent over the floor, in which extra stoves are placed to protect the workmen and the upper surfaces of the concrete.

Great care must be taken to have the fires kept burning continuously for two days, after which the concrete may be allowed to freeze without fear.

The work must be examined from time to time until it is found to be hardened sufficiently. During summer working the author has allowed the supports from the underside of slabs to be removed in four days, but on other occasions four weeks have not been found to be too long.

There are many examples of concrete works which have stood the test of time without showing any signs of being affected by frost; but, on the other hand, a few cases have been reported of very serious corrosion due to the action of frost, such as bridge piers and reinforced-concrete piles.

Judging from the information available at present, concrete exposed in air in a dry locality need not be affected by frost any more than good building stone, and probably it will stand much better. Concrete always submerged under water is protected and need cause no anxiety. But concrete alternately wetted and frozen must be protected from frost. On work which is being carried out at Halifax, Mr. John Kennedy, M.Inst.C.E., is protecting the concrete piles between high and low water with a covering of wood about 2 in. in thickness, which it is hoped will prevent the action of frost.

* Abstract of paper read at a meeting of the Institution of Civil Engineers on Tuesday last.

STORIES OF GREAT ENGINEERS.

There is some consolation in the fact that, though the pay of the rank and file of civil engineers is still very vile, it is vastly better than it was in the days of yore—at least, in the cases of consultants of repute. It is recorded that John Smeaton was satisfied to be paid two guineas for a full day's work, and this was the man of whom Robert Stephenson spoke as "the engineer of the highest intellectual eminence that had yet appeared in England," and "the greatest philosopher in our profession that this country has yet produced."

Rennie's bill against the Manchester Waterworks Company for his year and a-half's advice was only £159, his charge to them for a whole day's labour being six guineas. The Ordnance Department he charged seven guineas a day, and General Bowmrigg, the head of the department, complained, saying it was equal to the pay of a Field Marshal. "Well," replied Rennie, "I am a Field Marshal in my profession, and if a Field Marshal in your line had answered your purpose I suppose you would not have sent for me!" "Then you refuse to make any abatement?" "Not a penny," replied the engineer—and the bill was paid.

Have we any leading engineers as versatile as John Rennie? During his college career he read Emerson, Switzer, Maclaurin, Belidor, and Gravesande, allowing neither pleasure nor society to divert him from his studies. As a relaxation he learnt French and German, and was shortly able to read both with ease. His recreation was mostly of a solitary kind, and having a taste for music he acquired considerable proficiency on the flute and the violin, and even went so far as to buy a set of bagpipes and learn to play upon them. But when he left Edinburgh the extensive nature of his engagements so completely occupied his time that in a few years flute, fiddle and bagpipes were laid by altogether.

Among John Rennie's earliest pieces of workmanship was a fleet of miniature ships, which he made when he was only about ten years old. Shortly after, by the advice and with the assistance of his friend Meikle—who took as much pride in his performances as if they had been his own—Rennie made a model of a windmill, another of a fire engine (or steam engine), and another of Vellore's pile engine, all displaying a considerable amount of manual dexterity. According to Dr. Smiles' "Lives of the Engineers," at least some of these early efforts of the great engineer's boyish genius were still in existence some ten years ago. It would be interesting to know if they still exist, and, if so, where.

Liverpool Municipal Staffs' War Fund.—All the officers, servants, and workmen in the Liverpool municipal service consented to subscribe, *pro rata*, to the war relief funds, and the deductions are being made from their salaries and wages on each monthly or weekly day of payment. So far as can yet be estimated, the sums from the various departments will amount to about £20,000 a year.

A Plea for the Better Remuneration of Municipal Surveyors and Inspectors of Nuisances in Small Urban and Rural Districts.*

By G. ELLSON CHIVERS (Assoc.M.Inst.C.E., Surveyor to the Ormskirk Urban District Council.

In looking through the lists of vacancies for the position of surveyor and inspector of nuisances in the small urban districts, and to the majority of the rural districts, one cannot but feel that the remuneration often offered to these officers is exceedingly small and, I think we can justly say, scandalous, especially when an officer has to devote his whole time to his duties. Municipal officers are well acquainted with the position of affairs. The salaries vary from £60 to £90 per annum, and in some cases the amount offered is even lower than this. The duties to be performed, as laid down in the advertisements or in the list of duties provided for the candidate's guidance, leave no doubt that a "fully" qualified man is required.

In the smaller places the officer has invariably to carry out the duties attached to the dual appointment of surveyor and inspector of nuisances, and it is laid down that he must hold the Inspector of Nuisances' Certificate of the Royal Sanitary Institute, or some similar qualification, this being imperative, according to the Local Government Board requirements relating to the appointment of inspectors, if a council desires repayment of half of this officer's salary. I ask, do the councils realise what it usually costs a man to obtain even this qualification? As a preliminary training the officer may have spent several years in a surveyor's or inspector's office; in many cases he has obtained the aid of a professional coach to assist him to acquire the necessary knowledge, and has devoted a large amount of his otherwise leisure hours to study. He has had to scrape together the necessary fee for the examination, and in addition he has often had hotel and travelling expenses to pay, and he has had to provide himself with a large number of professional books which cost anything from a few shillings each upwards, and together entail a large outlay. Even supposing the student for the qualification dispenses with any help, he has to make up for it in time and in money for more books, and the money has to be gleaned from a small wage. When the individual has obtained his certificate, the hope held out to him is a paltry remuneration working out at from 23s. to 34s. weekly—a less sum than is paid to many unskilled labourers.

Is it fair and just to pay municipal officers a less sum than is paid to a mechanic, considering the knowledge required from and the responsibility laid upon him? He is supposed to be and should be qualified to supervise the work of these men, and to have a sound knowledge of all work connected with building and sanitary engineering in order to interpret aright anything required to be done. As an inspector, it is necessary for him to be at least a fair draughtsman, while his general knowledge must certainly be of a high standard.

As a surveyor his duties may be multitudinous. In addition to being highway, building and sanitary surveyor, he may be sewage works manager, waterworks engineer, gasworks manager, superintendent of bathing-place, recreation grounds, cemetery and allotments, and, it may be, chief officer of the fire brigade. He has full responsibility thrown upon him for all the work to be performed. He is called upon to prepare plans, specifications and estimates for all work carried out, which may be very considerable. Should the council undertake the erection of working-class dwellings, he has to prepare the plans without any extra remuneration, and he may also have to prepare plans for other municipal buildings.

The amount expended yearly may vary upwards from £2,000 (which figure is low enough for comparison) upon actual work carried out, including labour and materials in all departments. Taking an architect and surveyor's fee for preparing necessary plans, specifications and supervision of works at 5 per cent. this would amount to £100 exclusive of all incidental extra expenses. Many of these same councils will pay an outside gentleman this 5 per cent, and in addition incidental and travelling expenses without a murmur, and yet they expect their permanent officer to work for less than 3 per cent on work carried out. The officer is at the same time called upon to attend council and committee meetings at hours when other people are taking a little recreation. This time, in some places, is no small amount, and the officer can scarcely call his body or his soul his own. He has often to put up with the whims and fancies of individual councillors, making his life none too pleasant. At the hours when the ordinary mechanic is taking his leisure, he is thinking and pondering over his work for the next day. It is not for him to say "Take no thought for the morrow." The mechanic downs his tools and the clerk his pen at the usual hour of leaving off, and thinks no more of his work until starting-time comes next day.

It is very certain that the surveyor has to spend a good deal more time and money on his education in order that he may become properly qualified than the inspector of nuisances. He requires a much wider knowledge (which is, in my opinion, much harder to acquire), and the money spent on his education and the expense incurred to secure the necessary diplomas and certificates showing his efficiency amount to a considerable sum.

We need only to glance through the table set out by Mr. H. P. Boulnois, and to read Prof. Matthews' lectures at the University of London, to realise the vastness of the requirements. As surveyor to one of the smaller urban authorities I can speak feelingly, and I feel sure you will forgive me if you think I am stating my own case, but I have had forced upon me the fact that a great deal more is expected from us than is often expected from surveyors to the larger authorities, where specialisation is the rule, and where it is very seldom that they are expected or required to carry out all municipal works. It would, of course, be absurd for this reason to ask that our remuneration should be as much as theirs, but it is very certain a substantial increase should be given—more in keeping with our position and status, and the knowledge we have to possess.

During the last few years, as you are all probably aware, Nonconformists in this country have come to the conclusion that it is necessary that their ministers should have a minimum salary or stipend of £120 per annum (a low enough figure) if they are to keep themselves comfortable and maintain a position befitting their station in life, and the members of the various communities are evidently in agreement with this if we may go by the large sums of money collected to secure this object. Adopting these same reasons, and in all sincerity, I feel that our position is at least equal with theirs, and our duties quite as onerous. We are told cleanliness is next to godliness, and our duties are bound up with cleanliness; and can we not say godliness goes with cleanliness? I contend therefore that a minimum salary of £120 per annum should be paid to surveyors and inspectors throughout the country if whole-time service is required. No district is so small that this amount could not be paid, and it is certainly not over large for an officer to keep up a respectable appearance and live comfortably, and at the same time add to his professional knowledge, which latter is very necessary and cannot be done without money—that is, if he desires to be up to date and advise his council wisely.

In what way can this more efficient remuneration be secured? It cannot, I fear, be obtained by trade union methods for obvious reasons, and, as stated in my article in our *Journal*, the only way is to bring pressure to bear upon the Government, or the Local Government Board, to force local authorities to pay a minimum salary worked out on a sliding scale, taking population, area, rateable value, and the duties to be performed into account, and adopting £120 as the minimum. At the same time it must be made

* Paper read on Saturday last at the annual meeting of the Institution of Municipal Engineers.

compulsory for the authorities to appoint a fully qualified man to carry out not only the duties of an inspector of nuisances, but also of surveyor and all that term means. Why should not a minimum salary be the provision in any Bill which is promoted for the purpose of superannuation and security of tenure?

Many small towns get over the question of the small salary, and evade their responsibilities by allowing their officer to undertake private work. I question whether this is a wise course to adopt in any case, since it is evident such an officer cannot always do justice to the council he serves when private interests conflict, as at times they will do. He often becomes supervisor and adviser to his council as to his own private work, and it goes without saying that no man should be in this position. The architect and surveyor in private practice is, I feel, justified in complaining of this procedure, although actually his complaints may not always be justified, as I feel certain that all public officers who carry out private work in their districts are very conscientious, and to prevent any cause for complaint would themselves go beyond their council's requirements.

It appears to me that much could be done by the combination of districts. The surveyor to the small urban could also act as surveyor to the adjoining rural district, or to part of it, and the inspector of nuisances could follow suit with more satisfactory results. At the same time, in making this suggestion I feel that no district is so small or so poor that it could not pay the minimum salary before mentioned, and secure a full-time officer to itself.

DISCUSSION OF MR CHILVERS' PAPER.

Mr. E. A. STICKLAND (Windsor), in proposing a vote of thanks to the author, said it seemed to him that local authorities at the present time wanted a great deal more for their money than they ought reasonably to expect. At the Cheltenham meeting of the Institution of Municipal and County Engineers Mr. Percy Boulnois took up the question of the training of municipal engineers, and from what he said it seemed that a necessary preliminary to being able to earn 30s. a week was that a youth must take a course at a university and be apprenticed to a good engineer. If the youth had a good master, and the latter were able afterwards to get his pupil a situation at the wage he had mentioned, the gentleman in question would think he had done well for the young man. Later on, perhaps, the budding municipal engineer would look round for a better appointment—as surveyor and inspector of nuisances at a salary of, perhaps, £120 a year. It was a disgrace. A bricklayer could earn his 10d. an hour, but a surveyor to a local authority, who worked often fifteen hours a day, was not as well paid, and yet must not live in the same way as the bricklayer. For £2 10s. a week he had to keep up a position which it was only possible to do on at least £5 a week, the result being that, unless he had other sources of income, he made a very poor show. And all the time they had someone looking after them to see that they remained honest. The question was, how were they to improve their position? So long as local authorities offered salaries of £120 and £150, and got as many as eighty applicants for the vacant posts, they could hope for nothing. The mere fact that there were so many applicants for such positions would be an encouragement to public bodies to offer these small salaries, and the only remedy seemed to be the formation of an association to fix adequate rates of remuneration.

Mr. H. C. ADAMS (London), seconding the vote of thanks, said he had been through the mill of municipal appointments, and therefore, while it had been his good fortune to get into private life, he had certainly inside knowledge of the circumstances. In his paper Mr. Chilvers did not make it quite clear whether he referred to all municipal engineers or only to some who were underpaid. He thought, perhaps, that the essence of the whole matter was given in the concluding part of the paper, in which the author called for a minimum wage for all municipal engineers. That question had agitated the country for many years without any solution being obtained. They had to consider the value of a job, and it was impossible to generalise in every case in that connection. In a district with a very low rateable value a qualified man would be simply wasted, and a glorified foreman would be all that was required. The more extensive the qualifications of a municipal engineer, the better he was able to carry out works at a minimum of cost. If a council, by paying a low salary, secured the services of a poorly qualified man, they had to pay in the increased cost of their works what they saved in the remuneration given. It was a bad policy, but apparently they could not be brought to see their folly. As to the question of taking outside work, he did not object to that. Everyone was entitled to make a living, but if a man was not sufficiently qualified he should refrain, and if he did undertake such work he should insist on being paid full professional fees. There was nothing worse than doing work at a price less than remunerative. He thought municipal engineers had the remedy in their own hands. It was frequently the case that when an appointment was advertised there were as many as 200 applicants. Even when there were only 100 probably at least 90 of those applying already had positions. Why should men want to apply for an underpaid appointment when they were already earning something that enabled them to live? If it were made the rule to disregard such vacancies the local authority would be compelled in the end to increase the salary. Even if four or five men did make application steps could be taken to bring them into line with the others.

The vote of thanks was passed.

Mr. J. S. WOODDISSE (Shardlow) asked whether the whole question did not rest on the law of supply and demand. If they could cut down the supply of pupils the supply of engineers would be curtailed, and the demand would regulate itself.

Mr. J. ROBINSON (Darlington) agreed that it was impossible for a man to live decently on the salaries paid at present, and that he had no option, especially if he were a married man with a family, but to try and earn money in other ways.

Mr. E. WHITWELL (Abersychan) said he had known of instances where the salary paid to the surveyor commenced at an amount even less than that paid to the road foreman.

Mr. T. MUNDY (Woolwich) observed that, so long as surveyors made a practice of taking pupils for the fees they got from them, the market would continue to be overstocked, and councils would offer no better salaries, knowing that there would always be plenty of applicants for the positions they advertised.

Mr. W. O. DAVIS (Leominster) spoke of allowances for travelling expenses being regarded as part of salaries. This, he contended, helped to make salaries lower.

The PRESIDENT (Mr. Matthews Jones), in closing the discussion, agreed that it was the abundance of pupils who were continually coming out of their time who constituted the larger proportion of the applicants for vacant positions.

Mr. CHILVERS, in the course of his reply, pointed out that if qualified men did not offer themselves for these low-paid positions the "local candidate" would, with the result that the local linen draper would get the job. If they did not try to make a step forward, they simply sat where they were for years.

Abattoir Floors.—It is evident that abattoirs must be constructed in such a way that the floors will be absolutely impervious to the penetration of wet of every description. It is therefore interesting to learn that the new abattoirs for the Leeds Corporation will be treated with the cement waterproofing powder "Pudlo."

"Thomas Hawksley" Lecture.—Mr. B. W. Bryan, M.I.MECH.E., chief engineer, South Essex waterworks, will deliver the above lecture (prepared by his father, the late Mr. William B. Bryan) on "Pumping and other Machinery for Waterworks and Drainage," as follows: London, at the Institution of Mechanical Engineers to-day (Friday) at 8 p.m.; Manchester, in the Portico Library, Mosley-street, on Tuesday next, at 8 p.m.; Birmingham, in the Medical Lecture Theatre of the University, Edmund-street, on Thursday next at 7.45 p.m. Visitors are invited.

L.C.B. and Surveyor's Grant.—With regard to a proposed grant of £150 to the surveyor to the Aldershot Urban District Council, Mr. F. C. Uren, for extra services in preparing plans and specifications in connection with the sewerage extension scheme, the Local Government Board have written that it was not competent for the council to pass such a vote. As an alternative the council have agreed to the board's suggestion that the surveyor's salary should be increased for a period by £150, payable in three sums of £50 out of the present and two following rates.

Institution of Municipal Engineers.

ANNUAL GENERAL MEETING IN LONDON.

The sixty-sixth annual general meeting of the Institution of Municipal Engineers was held on Saturday last at the Central Council Rooms, Landseer House, Chancery Lane, London, under the presidency of the retiring president, Mr. Horace Boot, M.Inst.C.E., M.I.Mech.E., Borough Engineer and Waterworks Engineer, Wallasey. The attendance included the following: Messrs. W. Matthews (Hove), city engineer and surveyor, Charles (Plymouth), Horace Boot (Wallasey), retiring president, F. A. Stockdale (Accrington), Henry C. Adams (vice-president), A. E. Bickford (vice-president), Leo Reidy (vice-president), E. Whitwell (vice-president), T. Mundy (hon. treasurer), Dan Bailey (Spalding), W. L. Cary (Rutherglen), G. Bates (Chelsea), Colonel John Davies (Mexico), W. O. Davis (Leominster), F. W. Poynter (Watford), A. Palmer (Greenwich), F. Leslie Martin (Lambeth), G. F. Lyon (Lambeth), W. Wallin (Newcastle), J. S. Wooddisse (Shardlow), and B. Wyatt (secretary of the institution).

The secretary read the minutes of the last meeting and these having been duly confirmed,

Mr. Boot said he would like to make a few remarks with regard to the past year's work. The progress of the Institution had been satisfactory. The roll of membership had increased. They had a large number of members from all parts of the world, including Egypt, India, Australia, Canada, China, and South Africa, and the institution was thus acquiring a world-wide name. During the year the Mutual Defence Fund had been brought into operation. Several cases had been brought before them and carefully considered to see what action could be taken. He thought it would be within their memory or knowledge for what the fund was established, but he would like again to point out what its aim and object were. All municipal officials, or most of them, were subject to dismissal at the pleasure of their council. It was an uncomfortable feeling for a chief official, or for men in subordinate positions, to know that they might be discharged through no fault of their own, or rather at the whim of a council or committee. It was to see that such wrongs might be righted that the institution had established the Mutual Defence Fund. When they were paying their contribution to this fund they could feel that they were getting good value. Those of them that were in comfortable positions with their corporations would feel that they were doing all they could to help those who were not so well situated. Personally he would be pleased even if the fund required more money, for he would feel that he was doing all he could to help those who might not be so well off as himself. He thought they would agree, on reading the balance-sheet, that the financial position shown therein was satisfactory. He hoped they would also agree that the various reports and the number of meetings held were also satisfactory. Coming to the question of superannuation, the institution, as they were aware, had always manifested a keen desire to help the matter forward. A subject which did not meet with the general approval of the council was that relating to the associate class, and he would leave that for the future president to deal with during his year of office. As to the amendment of the by-laws and the alterations with respect to the scrutineers, this was the first year these had been put in operation, and the result, so far as they were able to judge, was satisfactory. On the question of premiums for papers he might say that, with respect to the papers he had submitted to him, he had read them carefully, and he, in conjunction with other members of the council, agreed that the result had been good. It was unfortunate that they should meet at such a particular period of English history. He referred to the war, which had not been sought by this country, but, on the contrary, had been brought about by the arrogance and pride of a certain class of the German people. Unfortunately, they who studied education, and hoped that this institution might be one of the leading lights of a special education and of the education of the people in general, could not help considering, with some dismay, that a war of such fearful bloodshed and inhuman deeds should take place between civilised nations. It led them to think that something more than education was required in the world. However, their heartfelt sympathies would go out to the men of the Empire who were fighting against an arrogant and insolent foe, to feel that they were an integral part of it was satisfactory to know that the institution had taken its part in the war. The circular letter which he had the pleasure of sending out to the members had met with a hearty response, and the officer commanding, Captain Martin, would do them the honour of attending their informal dinner in the evening, so that the members would have the opportunity of seeing one of the men connected with the institution who was doing great work for the Empire. In conclusion he had only to say that the report of the institution, including the balance sheet, was now open for discussion.

The annual report of the council, which was taken as read, was in the following terms:—

ROLL OF THE INSTITUTION.

At June 30, 1913, the roll of the Institution was 915 consisting of 728 members, 120 associate members, and 67 students. At June 30, 1914, the roll was 895, consisting of 704 members, 124 associate members, and 67 students. During the year 22 members, 13 associate members, and 7 students were elected, and 5 associate members were transferred to membership. The losses resulting from death, resignation, erasure by change of appointment and other causes amount to 51 members, 4 associate members, and 7 students.

FINANCES.

The accounts of the Institution have been audited, as on former occasions, by Messrs. Leake & Co., chartered accountants, and the balance-sheet, together with income and expenditure account, are herewith presented. The Council are pleased to be able to show again an excess of income over expenditure on the year's working, amounting in this instance to £36 5s. 6d., and making an accumulated balance of £392 4s. 6d., notwithstanding that during the year £100 has been laid aside as a provision against "irrecoverables." Two features of a satisfactory nature are the reduction in the amount of subscriptions overdue by £105 1s. 3d., and the reduction of current liabilities by £94 10s. 6d.

MEETINGS.

Three general meetings, ten Council meetings, and twenty-one district meetings were held during the financial year. There were also eight meetings of the Finance Committee and eight of the General Purposes Committee. The general meetings were held in London; the district meetings at Newcastle (two), Manchester, Carlisle, Chester-le-Street, Crowborough, Oundle, Leeds, Birmingham, Darlington, Finedon, Kettering, Oldham, Hull, Tisbury, and Leicester. One Council meeting was held at Newcastle and another at Manchester. All the other meetings were held in London.

PREMIUMS FOR PAPERS.

The premiums for the year 1913-14 for papers read before meetings of the Institution have been awarded as follows: President's premium (presented by Mr. Horace Boot) to Mr. Arthur Palmer for his paper "The Need for Standardisation in Drainage Details"; Institution premium to Mr. William T. Taylor for his paper "Greater New York's Water Supply Scheme."

PROVINCIAL COUNCIL MEETINGS.

Provincial Council meetings have again been held during the year, the meetings being held at Newcastle and Manchester. A good attendance was recorded upon each occasion.

N.A.L.G.O.

The delegates to the National Association of Local Government Officers for the year were Messrs. Latham, Pegge, Prescott, and Stickland.

SUPERANNUATION.

During the past year the National Association of Local Government Officers has made magnificent progress in all directions, particularly in connection with the Superannuation Bill. In June last the President of the Local Government Board received a deputation from the National Association, and, after hearing the Association's speakers, admitted in his

reply that there appeared to be a very good case for superannuation for all local government officers. Mr. Herbert Samuel promised the Association's representatives that he would immediately take up the question, and his first step would be to draw up a statement of the present position in regard to the superannuation of local government officers and to make mention of the various considerations he had stated in his reply, and to communicate with the organisations that represent the local authorities, and to ask their approval at an inquiry being made into the whole of the question. The President of the Local Government Board lost very little time in carrying out his promise to the Association. The Association of Municipal Corporations, County Councils Association, Urban District Councils

whose proposal for election has been approved by the Council shall be submitted to the whole of the corporate members of the Institution before final ratification (By-law No. 5) still obtains.

MEMBERSHIP BADGES.

It was decided that button-hole badges, for the use of corporate members and students, be obtained and supplied at a cost not exceeding 1s. each.*

SURVEYORS' DUTIES.

The question of the overlapping of surveyors' duties by medical officers of health was raised by the members of the Northern District of the Institution, and the Council, having carefully considered the matter, passed the following resolution: "That the Institution considers that the whole of the duties

LEAKE & Co. (Chartered Accountants), Auditors.

Association, and Rural District Councils' Association have all been communicated with, and the next step will depend entirely upon the nature of their replies.

ROYAL SANITARY INSTITUTE CONGRESS.

It was decided that, in conformity with the practice of former years, the Institution should accept the invitation of the Royal Sanitary Institute to be represented at their congress, and Messrs. Bleazard and Finch were appointed delegates.

ELECTION OF CORPORATE MEMBERS.

Every application for admittance to corporate membership of the Institution is now submitted directly it is received to the District Committee in whose district the candidate may be. One month is allowed to the District Committee for consideration and report, at the expiration of which the application is considered by the Council. The Council feel that with this additional precaution the chances of the admittance of an undesirable member are very remote. The rule that the name of each candidate

the construction, maintenance and cleansing of roads and sewers, and in the removal of house refuse, are duties appertaining solely to the engineering and surveying department of a local authority, and in support of this opinion refer to the Local Government Board Order of July 25, 1913, where reference is made to the removal of house refuse 'under the supervision of the surveyor.'"

HIGHWAY ENGINEERING.

A letter from the Roads Improvement Association, enclosing a copy of one by Mr. Percy Boulnois on "The Need for some Special Training of the Road Engineer," was considered by the Council, and the secretary was instructed to reply that the Institution fully recognised the importance of the matter, and in fact had, for some years now, conducted a special examination in highway engineering, such examination being under the control of a board of eminent engineers. Application was made later to the Insti-

* These have now been made and are on sale at 1s. each.

[illegible] to the Roads Improvement Association for the appointment of a representative on the [illegible] was duly agreed to, and Mr. E. A. Stickland was appointed.

ARCHITECTS' REGISTRATION BILL

The Architects' Registration Bill was before the Council and the General Purposes Committee on several occasions, and its provisions were very fully considered. As a result, the Council decided that the Institution oppose the Bill unless municipal engineers be either registered under the Act or exempted from its operation, and the Society of Architects were informed of such decision. It was then proposed by the Society that a conference of representatives of the two bodies be held, and this course has been agreed to. The conference has not yet been held.

WAR OFFICE AND MOTOR LORRIES

Certain correspondence and printed matter from the War Office with reference to a subsidy scheme for motor lorries was considered by the Council, who decided that the scheme should be noted in the pages of the Institution Journal with the advice to members requiring further information to communicate direct with the Department. The reference to the scheme appeared in the November, 1913, issue of the Journal.

MUTUAL AID AND DEFENCE

As foreshadowed in the last Annual Report, the scheme for the creation of a Mutual Aid and Defence Fund upon a compulsory basis received the approval of the members convened at a Special General Meeting, and the fund is now being satisfactorily worked, members and students remitting their contributions with their annual subscriptions. Four cases have received the attention of the Council during the year. In one of these cases Mr. Stickland and the secretary were granted a special interview with a prominent official of the Local Government Board, at which the matter was very fully gone into and certain representations were made. In two other of the cases the opinion of the solicitors to the Institution was obtained, and in the remaining case the points at issue were satisfactorily arranged without the necessity for either interview or legal assistance. The question of the administration of the fund is now receiving the serious consideration of the Council.

ASSOCIATE CLASS.

The proposal to institute an Associate Class was before a Special General Meeting, and was sent back to the Council for further consideration. It was then decided that a postal vote should be taken upon it, and Messrs. A. H. Jennings and A. N. Hudswell were appointed scrutineers. They reported that the voting was: Affirmative 105, negative 61, neutral 10, spoilt papers 4; total 180. Owing to the intervention of neutral voting the affirmative votes (for the formation of the class) fell short by a fraction of one vote of the three-fifths required by the by-laws, and the proposal was therefore lost. No further steps in the matter have since been taken.

BY-LAW AMENDMENTS AND ADDITIONS.

At the Special General Meeting referred to above certain amendments and additions to the by-laws were proposed for adoption, and all were carried with the exception of the one relating to the proposed associate class. These amendments and additions came into operation on January 1st, and a by-laws addendum sheet has been issued to corporate members and students.

Mr. A. E. STICKLAND proposed that the report and balance-sheet be adopted. The president, he said, had gone through a number of items in connection with the papers, and he (the speaker) did not think there was much for him to say. He would say, however, that he did not agree with Mr. Boot when he stated that the membership had increased, for he found that the number was twenty-two less than last year. This was rather unfortunate, because an institution of this sort should not be on the retrograde track; their motto should rather be "Forward!" He hoped that when they were adopting their next balance-sheet they would be able to report that they had recovered their lost membership.

Mr. H. C. ADAMS seconded. With regard to the matter referred to by Mr. Stickland, it should be distinctly understood by the members that the institution had adopted a very strong line in regard to the non-payment of subscriptions by promptly removing from the list those who dropped behind. It was better to show a decrease of twenty-two members who had failed to meet their obligation than to show a book increase of members who might not pay.

The report and balance-sheet were then adopted, and the result of the ballot was announced as follows:

THE COUNCIL, 1914-15.

President: W. H. Matthews Jones, city engineer and surveyor, Chester.

Past-presidents: Ernest Albert Stickland, ASSOC.M. INST.C.E., borough surveyor, Windsor; Frank Latham, M.INST.C.E.I., borough engineer and surveyor, Penzance; Horace L. P. Boot, M.I.E.E., M.I.MECH.E., consulting municipal engineer, 7 Victoria-street, S.W.

Vice-presidents: Henry C. Adams, M.INST.C.E., M.I.MECH.E., F.R.SAN.I., consulting municipal engineer, 60 Queen Victoria-street, E.C.; A. R. Bleazard, borough engineer, Clitheroe; Arthur Bowes, ASSOC.M. INST.C.E., surveyor, Newton-in-Makerfield Urban District Council; H. J. Farmer, borough surveyor, Christchurch; William Finch, county surveyor and bridgemaster, Cumberland; John Robinson, surveyor, Darlington Rural District Council; Edward Whitwell, engineer and surveyor, Abersychan Urban District Council.

Hon. Treasurer: Thos. Mundy, deputy borough engineer, Woolwich.

Ordinary Members: John Bailey, surveyor, Spalding Urban District Council; Willie Bevan, borough surveyor and waterworks engineer, Haverfordwest; Walter Louis Carr, engineer and surveyor, Ruislip-Northwood Urban District Council; G. Belson Chilvers, surveyor, Oundle Urban District Council; Frank Cutler, deputy borough surveyor, Deptford, S.E.; E. Plummer Davies, engineer and surveyor, Tisbury Rural District Council; John Davison, borough surveyor, Morpeth; Arthur James Elson, deputy engineer and surveyor, Penge Urban District Council; Frank E. Ennals, surveyor, Billericay Rural District Council; Douglas C. Fidler, engineer and surveyor, Hayes Urban District Council; A. Winter Gray, senior assistant, borough of Lambeth; Ernest W. Hearn, borough engineer and waterworks engineer, Chard; Henry Hulse, borough surveyor and engineer, Droitwich; Rhys Williams Jones, county surveyor, Carmarthen (Western); John Lewis, surveyor, Yiewsley Urban District Council; Colin H. Macfarlane, burgh engineer, Rutherglen; Herbert William Marsden, borough surveyor, Richmond, Yorks; Charles F. Mayfield, borough surveyor, Godmanchester; John T. Pegge, city surveyor, Durham; Frank A. Pratley, surveyor, Epsom Rural District Council; H. C. H. Shenton, civil engineer, 28 Victoria-street, S.W.; John T. Shield, deputy borough and water engineer, Blackburn; George Symon, surveyor, Blaydon-on-Tyne Urban District Council; John Taylor, sanitary surveyor, Uckfield Rural District Council; David Thomas, engineer and surveyor, Ammanford Urban District Council; Charles Turton, surveyor and engineer, East Grinstead Rural District Council; W. T. Unwin, town and district surveyor and architect, March Urban District Council; William Wallin, consulting municipal engineer, Newcastle-on-Tyne; Henry J. Weaver, consulting municipal engineer, Gloucester.

The PRESIDENT stated that Mr. Harrison Halstead had withdrawn his name because he was unable to serve.

NEW PRESIDENT'S INSTALLATION.

Mr. BOOT then said his next duty was to vacate the chair, but before doing so he would first of all like to thank the whole of the officers, particularly the hon. district secretaries, the secretary, and the various chairmen of District Committees, for their courtesy and kindness, and the energy they had displayed during the year. It had been indeed a pleasure to have so many able lieutenants to render assistance, and he could assure the incoming president that if he were only served as well as he (Mr. Boot) had been he might have no fear for the progress of the institution. He would like before vacating the chair to say a few words with respect to the incoming president. Mr. W. H. Matthews Jones was well-known to him, if not personally, by name, as the city engineer of one of the most interesting cities perhaps in the kingdom. Chester had always been known as one of the best kept and cleanest of cities, and a place whose other features were sought after. It was also interesting to know that Mr. Jones's father was borough engineer of Chester before him, and he was therefore

carrying on the good work of his father. He was a junior in the borough engineer's office, and rose through various steps until now he held the important position he did. During his occupancy of the office Mr. Jones had carried out important works in connection with sewage disposal, roads, and many improvements involving the expenditure of large sums of money. Some years ago, when he (Mr. Boot) was quite a young man, he had the pleasure of visiting the city of Chester, and he remembered very well remarking to some American friends who were with him that he did not know who the city engineer was, but that it was quite evident that in Chester they had an extremely good man, little knowing that to-day he would have the pleasure of installing the same gentleman in his place as president of this institution. He wished Mr. Jones and the institution continued success for the future. He felt certain that the new president would leave no stone unturned to achieve that object. He thanked the members for the kindness they had shown him during the past year, and he had pleasure in asking Mr. Jones to take the chair in his place.

Mr. Boot forthwith vacated the chair, and Mr. Jones assumed the presidential office amid applause.

THANKS TO THE RETIRING PRESIDENT.

Mr. W. WALLIN, in proposing a vote of thanks to the retiring president, said he was a stranger among them, coming as he did from the North of England. As regarded Mr. Boot, he thought they would all agree that he had taken an exceptional amount of interest in the affairs of the institution. There had been no trouble and no work he had not entered into heart and soul. When they held their dinner in the Northern District they were sorry that, through indisposition, Mr. Boot was unable to be present. If Mr. Boot had been present he would have realised that, though the Northern contingent of members were a long way from those in the South, they were united as most enthusiastic workers for the institution. As to the various points mentioned by Mr. Boot in his retiring address, the question of the Defence Fund, they would agree, was of the highest importance. It was very difficult for the surveyor of any council to do his duty without bringing trouble upon himself. Some officials were in what might be termed a happy position, but this could not apply to the surveyor. To afford some measure of protection they were forming a good substantial fund for the defence of members. In the case of many urban councils, some members—the majority—supported the surveyor, but there were sometimes awkward customers to deal with, such as builders with personal interests at stake, and it was such as those who caused trouble. With regard to superannuation, he thought that was a question that should be taken up again by the institution, and he felt sure that their incoming president would give his attention to this. He did not know that he could add much to what the retiring president had said, except to say that he deserved a hearty vote of thanks at their hands. Unfortunately, the latter end of Mr. Boot's term of office had been disturbed by the awful war which was bringing havoc to everything and everybody. Many of them would like to know that they were doing something for their country, but they must bear in mind that the health of the community was just as important to those who were left behind as was the work in the trenches at the front. If they were all to go to the front there would be nobody to look after the home work, and they had therefore the satisfaction of knowing that though they did not all don khaki they were doing everything in their power to maintain in efficiency the various works that belonged to local administration.

Mr. H. C. ADAMS seconded the proposition, and remarked that if anyone deserved their thanks it was certainly Mr. Boot. He had been most assiduous in his attention to the work of the institution during his year of office. He had, in fact, created a record in the number of provincial meetings he had attended, and he (the speaker) must say he had often marvelled how he had managed to sandwich his presidential duties in with his private engagements in various parts of the country. At their council meetings he had always presided in the most impartial manner over the discussions. Each had his views, and no one on the council hesitated to advance them for the common good. It had certainly been a pleasure, so far as he was personally concerned, to work with Mr. Boot, and he thought he could speak for every member and say that they had had a most happy year under his guidance.

The vote of thanks was passed with acclamation.

Mr. BOOT, in response, thanked the members one and all for their vote of thanks. In doing what he had done he had only carried out his duty. He took the office of president knowing the importance of the position, and he felt that any man who took up the presidency would, like himself, appreciate the duty that was imposed upon him. His one regret was that business had prevented him from attending many of the district meetings, for he might tell them that he found it sometimes impossible to sandwich his professional duties in with the business of the institution. When he accepted the office he thought it might be possible to attend all the meetings, but it sometimes happened that, say, at Manchester, his business engagements prevented this being done; but he had sought to do his duty as well as he could, and he could say conscientiously that he thought the hon. district secretaries had done quite as much as he had for the institution. He hoped their new president would carefully consider the question of the tenure of office of municipal surveyors. He could not for the life of him see why certain chief officials in a town should be protected by the Government while other chief officers carrying out far more important work should hold office at the discretion or whim of the local authority. He referred to such officials as the medical officer of health and the chief constable, whose offices were not held at the whim of the council, although the appointments were made by the council. Before either of those officers could receive an intimation that they were not required, a proper report had to be made to the Government stating the reason, and they could have an inquiry held into the matter. He suggested that borough engineers and surveyors, electrical engineers—in fact, all chiefs of the various municipal departments—should have the same right as the medical officer of health and the chief constable. He thanked them very much for their kind vote.

A VOTE OF CONDOLENCE.

The secretary (Mr. B. Wyand) read the following letter, dated November 27th, from Mr. Frank Latham, past-president:

"Since my letter to you I have found it absolutely impossible to get away to attend the annual general meeting of the institution to be held in London. As I have already stated in my former letter, owing to the war, I have many additional duties thrust upon me, three of my assistants having left to join the colours. I have, however, delayed writing to Mr. W. H. Matthews Jones, thinking that family business might have called me to London, but I am not so fortunate. My brother, who has served his country in the London Scottish, successfully passed through the great charge of the 31st ultimo, and fought up to the 5th inst., which was the last date of his communication with me, and, knowing that he kept me well informed, the sudden absence of a letter made me fear that he might have been wounded, and that the next information would be that he was brought home to hospital. But, sad to say, last night I received an unofficial communication through the London Scottish that my poor brother has been killed at Ypres. I am afraid that the tidings are only too true. It is too sad for words; but I have the consolation of knowing that he did his duty, and as a wonderful marksman and most powerful man he must have done his share in the magnificent stands made by that splendid regiment. Under the circumstances I am deprived of embracing the opportunity of visiting London which I have been anxiously waiting for, and I can merely meditate on the fact that there are others besides myself who will have to face bereavement in the midst of anxious hope and suspense. Please convey my best wishes to the president-elect, hoping that his year of office will gather brightness as it proceeds, and that at the conclusion he may have the satisfaction of knowing that both the country and the institution are buoyant, and the nation's temporary distress changed into rejoicing."

In a postscript written on the outside of the envelope Mr. Latham added: "Letter just come. My poor brother blown to pieces by a shell."

The PRESIDENT stated that he had received a letter from Mr. Latham in practically identical terms to that just read. Mr. Latham was a personal friend of his, and he valued his friendship very much. He did not think they could do less than send that

Mr. Latham, though sorrowing for his brother's death, a brother, a son of the Empire, who could do his duty. Mr. Latham was always a great friend of the institution, and they could not do better than offer him their condolence in his sad loss. They should at the same time convey to Mr. Latham that the institution were proud of the fact that his brother had died in doing his duty.

The vote was passed in silence, the members standing while it was being put.

The president then proceeded to read the annual address as the following terms:—

PRESIDENTIAL ADDRESS

deeply I appreciate the honour the members of the Institution of Municipal Engineers have conferred upon me to-day in electing me as their president for the coming year. I shall endeavour to the best of my ability and with the time at my disposal to further the interests of this institution, so that I shall leave it when my year of office is over in a more flourishing condition, if possible, than I find it. You have in the few years since the institution has been founded elected as your presidents men well up in the profession of engineering and surveying, who have done great things and are still prepared to do great things for such a society as ours, and our thanks are due to these gentlemen for the time and energy which they have devoted to our cause. This year, owing to the war which is taking place, the duty of a president is not an envious one, but wars will have their day as other [illegible] and we in England must do our duty in supporting what I consider a just cause, and do all we can for the protection of our country by carrying on our works, and, if able to bear arms, to help our friends of foreign countries against that nation which considers itself all powerful, and which, in carrying out its ambitious schemes, would seem to have forgotten all the dignity of its birth and upbringing in the atrocious deeds it has performed to try and gain its ends. They have destroyed in a wanton manner villages, towns, and priceless treasures in the way of architecture and art, and it can only be hoped that the enemies of the Allies will suffer complete degradation in the near future.

This year it was intended to hold our annual meeting at Chester, and an interesting programme had been drafted out for a two-day meeting, and his Worship the Mayor of Chester, Mr. Alderman John M. Frost, had agreed to give the members a civic welcome, but owing to the war this arrangement was cancelled. At the council meeting held in October it was decided that the annual meeting should be a business meeting only and held in London, but your council hope that next year they will be able to hold the meeting in the town from which your president will be elected.

I am personally very glad to see that our institution is progressing, and that due care and consideration are given to applications made for admission, and that only applicants whom the council consider have had sufficient experience in the engineering and surveying profession are admitted. I think that even stricter lines might now be instituted as to admission into the institution.

The work of those gentlemen connected with the various branches of municipal work must of necessity be varied, as they have to keep in touch with the modern requirements which from time to time are brought about by the greater knowledge and thought which are always being given to municipal matters. Necessity, it has been said, is the mother of invention, but competition is now running necessity a very close race.

With the demand by a more educated and strenuous community, who now have in their minds a much higher standard of sanitation, and who do not always look at the present, but at the future, the responsibility of surveyors and engineers to local authorities is ever on the increase, and municipal works have to be carried out in a different manner to what they were fifteen or twenty years [illegible] energies of hundreds of engineers and members of councils, and in the future development of lands into building areas will be such that slums, courts and alleys will be done away with and only healthy [illegible] trees, &c., will exist, and it is the duty of all local authorities, with the help of their official advisers, to see that only such schemes are carried out as will be of benefit to the coming generations. I have attended town planning conferences, and in the majority of cases great attention has been given to roads and road construction, and whether such roads are to be main or secondary roads.

My contention has been, and still is, that the question of main roads is the first thing that should be given consideration to before any town planning is taken in hand by a local authority, and I believe the county council of a county should lay down for guidance, on a map of their county, the approximate position of all new and intended new roads. If each county were to do this and agree as to the lines of such roads, we should have a main road plan of England and Wales which would considerably help us in our deliberations, and the subsidiary roads in each local district could be laid out to couple up with such main roads. As an example, take Chester. Chester itself (not the county of Chester, but the city) is bounded by Cheshire, Flintshire and Denbighshire, and how is it possible for such a town to lay down the lines of main roads for itself under the conditions which exist?

Then we have the question, as I have already stated, of better sanitation, as well as that of better drainage and sewage disposal, and to these must be added the making of streets to meet the requirements of modern road traffic, building by-laws, the removal and disposal of house refuse, tramways, public baths and wash-houses, infectious diseases and tuberculosis hospitals, housing of the working classes, and many other matters. In dealing with these I do not intend to discuss them at length, but just to say a few words on each.

SANITATION.

[illegible] the surveyor of a town is concerned, the sanitation of the town for which he is responsible should be his first consideration. Streets, back passages, and all waste pieces of ground should be kept free from noxious substances, and all matters appertaining to the health of the neighbourhood (such as these) should have his first attention. If the streets and back passages and waste pieces of ground are kept in proper order the health of the district must be improved.

DRAINAGE AND SEWAGE DISPOSAL.

During recent years great advance has been made in the question of drainage and sewage disposal, and one could take up an immense amount of time in writing on these subjects, but I shall content myself by saying that drainage has become a science, and very careful consideration should be given to schemes before being carried out. Proper-sized pipes should be used, with proper and regular falls, and all joints should be evenly made and cleaned inside. It is astonishing to find on looking down some drains the amount of cement there is left at the joint inside a pipe, although the surveyor or his drainage inspector is told by those persons responsible for the laying of such drains that they have been thoroughly cleaned out. This cement at the joints as often as not causes stoppages and expenditure, but it must be remembered by persons having property being built or drains laid that the surveyor who comes round to inspect and finds fault with bad workmanship is really doing him a good turn and not an injury, and if I were in that happy and prosperous position of being able to build property I should have in my contract conditions a clause to the effect that any bad workmanship (and more especially that in connection with drains) ordered to be re-done by the surveyor of the local authority shall be re-done at the expense of the contractor, and not at the expense of the building owner.

All drains should have proper inspection eyes or chambers where a change of direction takes place, and should be subject to a water test, both before and after they are covered in. Men would then be more careful in the filling up and ramming of a trench so as not to break the joints, because if on the second test being applied to the drain it was

found faulty it would have to be uncovered and each broken pipe traced.

All new buildings should be separately mapped into the sewer if it is possible, and not in the old fashioned way of the drainage of one building passing up to another and so on until no one knows exactly where the drains go.

The drainage of premises is often not carried out as shown on the plans submitted, and it is therefore absolutely necessary for future information that all drains (and should be carefully surveyed and put down on a block plan of a scale not less than 16 ft. to 1 in., showing the line of the pipes, the position of inspection eyes and junctions, and the size of the pipes and their falls. A record of the tests made, how and by whom, should be endorsed on the plan for future reference.

All soil pipes, water-closet connections and ventilation pipes should be tested by a smoke test under pressure.

The question of an intercepting trap is a very open one, but for my part I do not like an intercepting trap on the line of any drain, and I have never asked builders to put one in. I believe that in the very near future building by-laws will leave it to the discretion of the builder or the person who is having the building erected whether an intercepting trap shall be provided or not.

SEWAGE DISPOSAL.

This is, of course, a question that cannot be written about in a paper of this description, for what would suit, say, Chester in a matter of this kind would not suit ninety-nine other towns. It is one of those questions which must be considered by the engineer or surveyor on its merits when it arises, and if the Royal Commission's Reports on Sewage Disposal are followed, there cannot be many difficulties which cannot be overcome.

MAKING OF NEW STREETS FOR MODERN ROAD TRAFFIC.

Now we come to a question which is a vital one to all surveyors who have the control of roads or streets. It cannot be denied that in ancient times the Romans knew how to make good roads, and how to lay them out, for we have many examples of Roman roads in England at the present time. It is well known that when the Romans decided to lay out a camp their roads were always laid north and south and east and west; but in later years roads and streets seem to have been made more or less on the line of old bridle paths and such like, and within the last twenty years streets have been inserted in between lines of buildings and on little pieces of vacant land indiscriminately and without any thought of the future. Streets will have now to be laid out on proper lines. We shall, as surveyors, have to see when a plan of an estate is submitted showing proposed roads, that they are laid out not only to suit the particular estate, but that they will suit the adjoining estates when they in turn come to be developed; but perhaps I am getting a little bit away from my subject, and am getting on to town planning questions.

When one comes to deal with the construction of streets, we have to think of the time when only a horse, mule, donkey or ox drew a wagon, and then to think of the present day, when a traction engine or motor will haul two or three wagons each carrying 20 tons weight or more, cutting up the roads which were never constructed for such traffic. The expenditure on roads to-day is enormous, and local authorities are groaning under the heavy burden they have to bear and to extract from the unwilling ratepayer to meet the demands for road maintenance. Chester is a town through which a tremendous amount of motor traffic passes from Liverpool, Manchester, and the North of England to Wales, and I know, to my sorrow, the damage my roads sustain through this kind of traffic; but what about a town like Warrington, where, on the main road through the town, there is practically a continuous flow of traction engines and motor lorries passing between Manchester and Liverpool. No ordinary water-bound macadam roads can stand this kind of traffic for long, and it is therefore up to the surveyor to construct such roads in his town or district as he may think best to suit the particular traffic which passes over them, but always having in mind what is likely to come his way in the future, and I would like here to impress upon you the necessity of not trying to put down a cheap road because your neighbour constructs a cheap road. Make up your mind as to what you require, and although you may be told that "Smithson and Co. make roads for such and such a price, do not be misled by people who have no further responsibility in such matters except to grind and grumble, and who will say 'I told you so" if you adopt a cheeseparing, false and economical view.

During the five past years it is astonishing to hear of the number of patent road materials which have been produced, and how the agent of one will tell you how much better his material is than the man who came along first, and if surveyors were to try every new road material, whether as a dust preventive or as one of a non-wearountable nature, he would soon find his materials in not a very large expenditure.

In Chester I have stuck to one thing, and that is tar-spraying, for my macadam roads—not gas tar straight from the gasworks, but distilled tar of various distillage, and the firm who supply me have given me three classes, which I call A, B and C, and I do not put these on my roads indiscriminately. Records are kept, and if I find that A or B or C of themselves are not right, then I mix so much of A, B or C, and carefully measure the quantities, taking the atmospheric temperature as well as the temperature of the tar when being put on the roads. Having for two or three years made a careful study of this I have now arrived at a definite conclusion as to what amount of tar shall be put on the various roads to suit the traffic which goes over them, and it is only by a careful study, and making up of one's own mind as to the best course to adopt that one can give general satisfaction.

The various road paving materials are too numerous to mention, but we have seen wood paving, granite and other setts, asphalt, brick and many other materials, and I am of the firm opinion that granite setts properly laid on a solid foundation will surely come back as the most cleanly and lasting of street or road surface paving that can be had, and if such paving is tar-sprayed or tar-painted, and the joints well filled up, it becomes almost noiseless.

I have recently, and still am, carrying out experiments in another direction of road making—viz., armoured concrete roadways—which have, up to the present, given the greatest possible satisfaction; and here, again, when one has studied the question in all its aspects, one is led to believe that all county main roads will be done on these lines in a few years from now, and if the surface of the concrete is allowed to set before traffic goes over it, I believe we shall not only have a more sanitary and watertight road surface, but even a dustless one.

It is not fair to compare prices of various classes of roads, as the price one surveyor pays for his materials may not be the same as that paid by another surveyor; but I can give an actual comparison between a reinforced-concrete road and an ordinary water-bound macadam road on a 9-in. rock or brick pitched foundation in Chester. The reinforced-concrete road, 6 in. of concrete being used and afterwards tar-sprayed, costs to lay 3s. 11d. per super. yard, and the water-bound macadam costs 6s. 10d. per super. yard, exactly the same price being paid for the broken granite used to form the matrix in both cases.

If anyone would like to have further information on the subject of reinforced-concrete roads, I shall be very pleased to let him have it, as I have constructed four streets in Chester on this method, but I always advise the surveyor using reinforced concrete carefully to study the traffic conditions, and not go haphazard at it and lay, say, 6 in. where 8 in. or 9 in. of concrete may be required.

BUILDING BY-LAWS.

At the present time building by-laws have not sufficient elasticity to enable the surveyor or building inspector to use his better judgment, and I often think that many buildings in their erection are spoilt for the want of this elasticity; but there we are, the law is passed and so we must abide by it. We surveyors cannot say to a builder, "Well, yes, you can do so and so," but which may not be in strict accord with the by-law, however. Where we have building by-laws the surveyor should master the same, so that when he is asked by an architect or builder if he can do so and so, the answer should be given at once, and not "Well, I shall have to see what the by-laws say," for, in my opinion, when this is done, it rather goes to show that you are wavering in your own mind as to

of the medical officer of health of the district, if not, the medical officer of health of the district, if of the municipal work, whether the surveyor or the

of the medical officer of health has never been brought up to control men

the men feel that they ought to go home and put on their Sunday clothes and wear a pair of kid gloves to carry them out. However, I cannot yet see the work of refuse removal being taken out of the surveyor's department. If it does come in any town I should like to see the difference in cost of removal and the complaint book's record at the end of twelve months.

The method of removal in various-sized towns must of necessity vary, and where motor lorries can be used economically and efficiently this must, of course, be the best way for the quicker transit of foul-smelling refuse through the streets.

Again, there is always trouble and time wasted in removal of refuse from the main thoroughfares in a city. Many shops and dwelling-houses combined do not open their premises until 8.30 or 9 o'clock in the morning, and by the time the shop has been swept up and the refuse put in the bin it is 10 o'clock, and I think there is nothing more objectionable to the man in the street as he comes in to his office than to see and have the odour of a refuse cart thrust at him. The remedy, of course, lies with the shopkeeper.

The method of disposal generally adopted in this country is that of cremation, but some towns use their refuse for raising low-lying land, as at Chester. My corporation [illegible] an estate of 400 acres of land which is very level, and only between 14 and 15 ft. above ordnance datum, and here we dig the ground out to a depth of 2 ft., fill in with refuse, and cover with the 2 ft. of earth already excavated, raising the ground level to not less than 20 ft. above ordnance datum. In two or three months after completion of an area we let it off as allotments, or it is taken over by the farmer of the land in whose occupation the field was before we started to tip. Good crops are obtained, and the Local Government Board do not object to this method of treating refuse where low-lying ground can be obtained and improved by raising.

The removal of trade refuse is becoming a serious matter in many towns, and I believe in some cities a charge is made for trade refuse removal, but this charge generally leads to a great deal of controversy between the official responsible for such removal and the tradesman, for in many cases the question arises as to what is trade refuse in small shops with houses or dwellings attached and what is house refuse. In Chester we remove all trade and house refuse, but not garden refuse.

TRAMWAYS.

So far as maintenance of permanent ways is concerned, this is becoming a very serious matter with many small local authorities, and Tramway Committees in many cases are faced with heavy expenditure on tracks owing to corrugation of rails and the giving way of foundations due to the heavy traffic passing over them. I have no doubt many surveyors who are responsible for tramway tracks have noticed how heavy traction engines and motor lorries, as well as horse-drawn vehicles, will utilise the tramway track to run along in preference to the macadamised portion of a roadway adjoining a track, and thus put wear and tear on the track for which it was not designed, breaking away portions of concrete foundations, and especially that portion under the outer rails on the up and down tracks.

Again, loose rails are a great source of worry and annoyance, because rails when once they become loose cannot be properly and securely refastened to the old concrete foundations. In my opinion many [illegible] and expensive

of the metals, and I have known in Chester where a 60-ft. length of rail has been taken out first thing in the morning and when it has come to be replaced, say in the middle of the afternoon, and the sun has been fairly hot, it would not go into its original place by 2 in. I do not say, however, that a rail which is buried in setts and partly in concrete will expand in the same ratio, but I have on a cold night carefully watched joints, and in many cases a penny could be placed edgeways into such joints, yet at midday following, when the sun has been upon the track, it has taken all one's time to find them, a mere hair-line being the only indication. This must cause to some extent the lifting of the rails, and in my opinion this lifting of the rail from its bed, although very, very slight, often causes the [illegible] track and in some measure the [illegible] the first cause of corrugation. It might be argued that when laying a track the joints, like a railway line, should be left more open, but this soon causes bumping and knocking, which in turn damage the tyres of the car wheels. It may perhaps be thought by some that in what I am about to say I am going back to ancient days, but I do say, and say it very seriously, that if I had to relay a track I would consider the laying of it on heavy creosoted sleepers, which in turn would be laid on not less than 6 in. of (and in) concrete. By this method, if a rail became loose, all that would be necessary would be to take up the rail, relay it on the sleeper, and re-anchor it down.

PUBLIC BATHS AND WASH-HOUSES.

In thickly populated areas and working-class districts I believe both public baths and wash-houses to be an absolute necessity, and they should be provided by the local authorities; but in residential districts public baths and wash-houses are not so necessary. We all know, however, that in the majority of towns public baths do not pay from a financial point of view, but the excellent amount of good they do in teaching the younger generation the art of swimming should be ample recompense to any local authority for such financial loss.

INFECTIOUS DISEASES AND TUBERCULOSIS HOSPITALS.

When these are being considered by a council they should be built on a site convenient to the town, especial care being taken not to have them on one that is low or likely to be crowded in by buildings which may be erected in years to come, and sufficient ground should be purchased to allow always of plenty of space being left around.

In my opinion tuberculosis hospitals or sanatoriums should not have too much money spent upon them, and such buildings should be more of a temporary character than of a permanent one, for we read that if proper precautions are taken all over the country at about one and the same time the terrible scourge of tuberculosis ought to be stamped out in twenty to twenty-five years. Therefore, it is no use erecting buildings that are likely to stand for 100 years or more, because we shall find, with the knowledge that is to come, that a sanatorium building erected now will in twenty years be more or less obsolete.

HOUSING OF THE WORKING CLASSES AND TOWN PLANNING.

These two, in my opinion, should go hand in hand, for to design the one without the other is only likely to cause dispute hereafter, and I do say that a good housing scheme cannot be designed unless it is done on town planning lines. Let the houses have plenty of air space surrounding them, not necessarily excessively wide streets, but streets wide enough to allow of trees being planted, and having grass margins, and give gardens back and front. Design and build your houses in blocks of threes and fours, and never have more than six in a block. Provide sufficient ground when purchasing land for a housing scheme to allow of allotments being formed for those working men who are interested in gardening. I know some working men in Chester who have allotment gardens about 1½ to 2 miles from their homes. This is too far, and I remember asking one man some little time ago how it was he took such an interest in his garden, especially after doing his day's work, and he replied that he looked upon it as a recreation, and that he could stretch his back when he felt inclined without being afraid of hearing his foreman or boss shouting, "Nah then, yer at it again, are yer?" It got the "missus" in the habit of coming out a bit, too, and "sometimes she brings the kid as well." I said, "You surely lose money on a

garden like yours" . . to have a[n] . . allotment, for . . he pays 2s. a week. "Oh, no," he said, "that's where you are wrong. I always make the rent out of what I get in the way of profits, and I grow enough potatoes and greens to last our family all the year round, and we always get them fresh."

This conversation is quite a true one, for it was one of my own workmen to whom I addressed the question, and I gave vent to the conclusion that allotment gardens are not only a pleasure, but in . . . a help to . . . times a garden.

With regard to town planning, so much has been said recently that anything I could say on this matter would only be repeating what has already been stated on the subject except that I should like to press upon **all** surveyors (especially in rapidly developing districts) the necessity of adopting a "town planning scheme for the protection of his district. If he will read, if he has not already done so, the Town Planning Act, he will find it gives his council such powers as to acquiring open spaces and only allowing of so many houses to be erected to the acre, that his district, instead of being a slum area, will in a few years be a "Utopia" in more ways than one.

In writing my address I have tried (more in the way of a friendly chat) to bring to your notice a few of the many pressing questions which are always before the notice of surveyors to local authorities and their assistants and members of their staff. We have all to keep abreast of the times, for no sooner do we do something than someone improves on what we have done and so we go on doing something to improve again, and so obtain greater knowledge.

To the younger members of this institution who do not hold a chief's position, and to those just engaging in the profession of an engineer and surveyor, let me say, Never be afraid to ask questions relating to your profession, and whenever answered read up about the same thing. Do nothing in a slipshod manner; do not get into a rut, which the oftener you get into only goes deeper, but keep on fresh ground, and I have no hesitation in saying that when your chance comes you will be all the more fit to take the responsibility placed upon your shoulders.

I have received many courtesies at the hands of all the members of the Institution of Municipal Engineers with whom I have come in contact, and may I tender my thanks to those gentlemen who so kindly nominated and seconded my name for election? I have also to thank our secretary, Mr. Wyand, who has always been kindness itself, and no trouble has ever been too great so long as he can oblige, and I shall have more to say about him on my retirement at the end of my year of office.

I shall attend your council meetings as often as I can, and it is my intention, if my duties at home will allow, to attend at least once during my year of office a meeting in each of the various districts.

In conclusion may I again say how I feel the honour you have done me in electing me your president for this year, and I am sure my council and fellow citizens at Chester feel with me that an honour has been conferred upon them likewise?

I cannot conclude without making one further reference to the war into which this country has been drawn. We have many members of our institution not only at home in various capacities serving in His Majesty's Forces, but also at the Front, and I am sure it is the wish of the whole of the members of the Institution of Municipal Engineers that they may have a safe and early return to their native land.

A vote of thanks to the president for his address was passed on the motion of Mr. H. Boot, seconded by Mr. E. Whitwell, Aberystwyth.

In acknowledgment the President said he was rather sorry that it was not customary to discuss the presidential address. What he had said represented, of course, only his own opinions, and good sound criticism never did any harm.

NEW PRESIDENT'S CAREER.

Mr. W. Matthews Jones, city surveyor and engineer for the city and county borough of Chester, the new president of the Institution of Municipal Engineers, is a member of the Institution of Municipal and County Engineers. He is thirty-nine years of age, and was educated at the King's School and Technical Schools, Chester. On leaving school, his father, Mr. I. Matthews Jones, M.Inst.C.E., F.S.I., had him articled co-jointly with Messrs. Douglas & Fordham, architects and surveyors, and himself. After completing his articles he was appointed as assistant in the city surveyor's office, Chester, and from this junior position he has risen to that of chief of this department in his native town.

Mr. Matthews Jones has had a very varied experience in municipal work and the following items selected from his career at Chester will be of interest at the present juncture. In connection with sewerage and drainage he has carried out to a cost [illegible] work amounting to some £23,000, while he has supervised schemes on behalf of urban districts outside the Chester boundary (whose sewage is treated by Chester) to the amount of about £37,000. While acting as resident engineer to his council, he supervised tramway works carried out at an expenditure of £48,000, and to his credit as engineer prepared and carried out extensions at a cost of £24,000. During the construction of the Chester sewage purification works, costing £70,000, he acted as resident engineer, and while deputy city engineer had full charge of the works for some two years after completion. He has now in preparation a town planning scheme for the city of Chester and outside districts, the area to be dealt with being 5,300 acres. In street widening and improvements he has executed works, including the purchase of property, to the value of £80,000. In an advisory capacity he has been responsible for many works, especially in connection with sewage disposal.

The following is extracted from the many testimonies to his abilities which have been given to him by his council: "Mr. Jones has carried out the duties connected with his office efficiently and well, being most diligent, painstaking and courteous, and possessing a high sense of duty . . . he is thoroughly conversant with the most scientific and up-to-date systems of road making, as our own roads testify . . . he is a man of pleasant bearing, courteous, a hard worker, and has had the management of large bodies of men, with whom he has always maintained a good relationship."

A portrait of Mr. Matthews Jones appears in the form of an inset to this issue.

COUNCIL MEETING.

At a meeting of the council held in London on November 25th the following applicants were recommended for admission:

To Membership: Mr. C. A. Howard, surveyor, Brigg Rural District Council; to Associate Membership: Messrs. J. L. Pelham, engineer's office, Hove, and J. W. Lloyd, assistant surveyor, Rushden Urban District Council.

New Members, &c. From the applicants recommended for admission at the last meeting three members were elected.

Public Health Acts (Building By-laws) Amendment Bill. The following resolution was passed unanimously: "That the council of the Institution of Municipal Engineers view with concern the proposed introduction of undue and unnecessary elasticity into the operation of building by-laws, and are in the strongest opposition to the Public Health Acts (Building By-laws) Amendment Bill. The erection of buildings in rural districts with any kind of material, and the possible extension of this concession to boroughs and urban districts, will in effect operate only to the detriment of the districts affected. The Memorandum to the Bill says: 'Above ground a man will be free to build as he likes, so long as he does nothing contrary to purposes of health,' and it is felt that these statements are in direct contradiction the one to the other. The only good point in the Bill is the discouragement of the crowding together of cottages, but this is provided for in existing Acts. The council foresee that if the Bill becomes law, the important and very necessary work of the building inspector in rural districts will practically cease."

Tenders for Sanitary Pipes.—A deputation from the Builders' Merchants' Alliance as regards uniformity of tender in the case of sanitary pipes was received, and after its withdrawal the council fully discussed the matter. A report will be prepared later.

Roll of Honour.—It was decided that a roll of honour embodying the names of members of the institution who serve their country during the war should be prepared, and the secretary will be pleased to have the necessary information.

Architects' Registration Bill.—The following members were elected to represent the institution at the forthcoming conference with the Society of Architects: Messrs. W. Matthews Jones, E. A. Stickland, E. Whitwell, H. J. Farmer, H. Hulse, W. L. Carr and D. C. Fidler.

MINIATURE RIFLE RANGES.

By J. H. SAGAR

[redacted]

for a proposed range may be of service to those members of the municipal engineering profession who may be called upon to design such structures.

The drawing shows an entirely new building; but in a town there are usually buildings which can be altered at a little expense to meet the requirements of the authorities.

For instance, the Southwark United Miniature Rifle Club have converted an arch under the railway into a very efficient range. The length was not 25 yds., but this has been overcome by having folding doors at the firing end, which abuts on to a paved yard. These doors can be opened, forming a screen on each side, and the platforms brought back to the required distance. The butt shown is also constructed at this range.

In open country the entire range need not be covered, but it must be fenced in. The butt is formed by an embankment faced with steel sheeting. The firing end is protected by a covering, so that the range may be used in all weathers.

It is advisable, where land can be obtained, to have a range of at least 50 yds.

There are many accessories not absolutely necessary, but which add to utility, such as telescopes with adjustable stands, a mat on each firing platform, notice boards, a number over each platform, and so forth.

Artificial lighting will also be required for an indoor range.

THIRTEENTH LIST.

We present herewith the thirteenth list of municipal engineering and sanitary officials who are taking part in the war, and shall be glad to hear of other cases within the knowledge of our readers.

Alexander, A., surveyor's assistant, Kendal Corporation, 4th Battalion, the Border Regiment (Territorials), on foreign service.

Armstrong, F. W., cashier, Kendal Corporation, 8th Battalion, the Border Regiment.

Beasley, A., motor lorry driver, county surveyor's department, Kent County Council, Mechanical Transport, A.S.C.

Carr, W. G., borough engineer's department, Southwark, 4th Battalion, Seaforth Highlanders.

Chaplin, Percy, turncock inspector, water department, Harrogate, Royal Field Artillery.

Chittenden, J., tractor driver's mate, county surveyor's department, Kent County Council, Army Service Corps.

Coleman, H., tractor driver's mate, county surveyor's department, Kent County Council, Royal Field Artillery.

Cooper, G., assistant surveyor, South Westmorland Rural District Council, Westmorland and Cumberland Yeomanry.

Davy, Gaius, assistant surveyor, county surveyor's department, Kent County Council, University and Public Schools Corps.

Durkin, Francis, ASSOC.M.INST.C.E., borough engineer's department, West Hartlepool, Second Lieutenant, Royal Garrison Artillery.

Fairbourn, A. N., surveyor's assistant, Kendal Corporation, 2nd Lieutenant, 8th Battalion, East Yorkshire Regiment.

Fitch, L., pupil to the borough surveyor, Sutton Coldfield, 17th Lancers.

Gent, Sergt.-Major, town clerk's office, Sutton Coldfield, has rejoined the Army as instructor.

Gunson, A., head clerk, borough treasurer's department, Kendal Corporation, 4th Battalion, the Border Regiment (Territorials), on foreign service.

Haigh, John F., assistant to Mr. W. A. H. Clarry, borough surveyor, Sutton Coldfield, enlisted in the Birmingham City Battalion, and since received a commission in the West Yorkshire Regiment.

Hawkens, E., tractor driver's mate, county surveyor's department, Kent County Council, Royal West Kents, Territorials.

Howden, A., engine driver at sewage works, Epsom Rural District Council.

Jackson, Edward B., pupil, engineer's department, Ulverston Rural District Council, 4th Batt. King's Own Regiment, B Company.

Jacobi, J., motor lorry driver, county surveyor's department, Kent County Council, Mechanical Transport, A.S.C.

Jennings, Henry, assistant sanitary inspector, South Westmorland Rural District Council, Westmorland and Cumberland Yeomanry.

King, Gilbert R., surveyor's department, Twickenham Urban District Council, National Reserve.

Lancaster, S., roller driver's mate, county surveyor's department, Kent County Council, R.A.M.C.

Leddra, J., cleansing department, St. Ives (Cornwall), R.N. Reserve.

Lloyd, W., motor lorry driver, county surveyor's department, Kent County Council, Mechanical Transport, A.S.C.

Maybourne, J., motor lorry driver, county surveyor's department, Kent County Council, Mechanical Transport, A.S.C.

Mitchell, R., borough engineer's department, West Hartlepool, Durham, R.G.A., Territorials.

Page, Reginald W. B., clerk, county surveyor's department, Kent County Council, 6th City of London Rifles.

Pearce, E. W., fitter, county surveyor's department, Kent County Council, Army Service Corps, Territorials.

Pettitt, F., motor lorry driver, county surveyor's department, Kent County Council, Mechanical Transport, A.S.C.

Pope, Wm., tractor driver, county surveyor's department, Kent County Council, Royal West Kents.

Proctor, J. E., rate collector, Kendal Corporation, 8th Battalion, the Border Regiment.

Relf, C., tractor driver's mate, county surveyor's department, Kent County Council, Army Service Corps, Territorials.

Richardson, John, driver chainman, water department, Harrogate, 5th West Yorkshire Regiment.

Roberts, Harry, clerk inspector, water department, Harrogate, sergeant, 10th West Yorks Regiment.

Smythe, C., roller driver's mate, county surveyor's department, Kent County Council, Royal West Kents.

Spicer, Leslie R., clerk, county surveyor's department, Kent County Council, 6th City of London Rifles.

Standen, E., chauffeur, county surveyor's department, Kent County Council, Mechanical Transport, A.S.C.

Stanley, O. G., surveyor and inspector to the Windlesham Urban District Council, Oxford and Bucks Light Infantry.

Stevens, R., road foreman, St. Ives (Cornwall), R.N. Reserve.

Tucker, W., motor lorry driver, county surveyor's department, Kent County Council, Mechanical Transport, A.S.C.

Tumber, E., roller driver's mate, county surveyor's department, Kent County Council, Army Ordnance Corps.

Webster, Thomas, borough engineer's department, West Hartlepool, R.A.M.C.

Willard, A., blacksmith's striker, county surveyor's department, Kent County Council, R.A.M.C., Territorials.

Williams, G., motor lorry driver, county surveyor's department, Kent County Council, Mechanical Transport, A.S.C.

Wilson, Fred., borough engineer's department, West Hartlepool, Royal Field Artillery.

Achorutes Purpurescens.—Mr. G. Bertram Kershaw, M.AM.SOC.C.E., writes: "I should be glad to correct an error which occurs in 'Some Notes on Achorutes Purpurescens,' printed in THE SURVEYOR of November 13th. Line 20, 'Antennæ, 5-jointed' should read 'Antennæ, 4-jointed.' The mistake arose through Roman figures being used in the MS. for the iv., the i being very indistinct. I am obliged to Mr. H. D. Bell for drawing my attention to this point."

Assistants' and Students' Section.

CONDUCTED BY SYDNEY G. TURNER, A.SOC.M.INST.C.E.

All communications in regard to this page must be addressed to the Editor, St. Bride's House, 24, Bride-lane, Fleet-street, E.C. Envelopes must be marked "Assistants' Section" in the top left-hand corner. Correspondents are invited to submit questions for consideration and answers to the questions which appear. For the contributions considered to be the most meritorious, one or more premiums in books will be awarded monthly. Diagrams must be drawn to scale on separate sheets, ready for reproduction.

THE MONTHLY PREMIUM.

The premium for November is divided between

Mr. R. HUMBLE,
Lr. Municipal Branch,
Wallham Green, S.W.,

and

Mr. B. KNIGHT,
Council Offices,
Hayes, Middlesex;

their papers have, in the opinion of the adjudicators, been the best received during the month.

QUESTIONS.

This week answers are invited to the following questions:—

442. Building Materials. What are chamotte tiles, and how are they made?

443. Vectors.—What are vector quantities? Explain how they may be added together graphically.

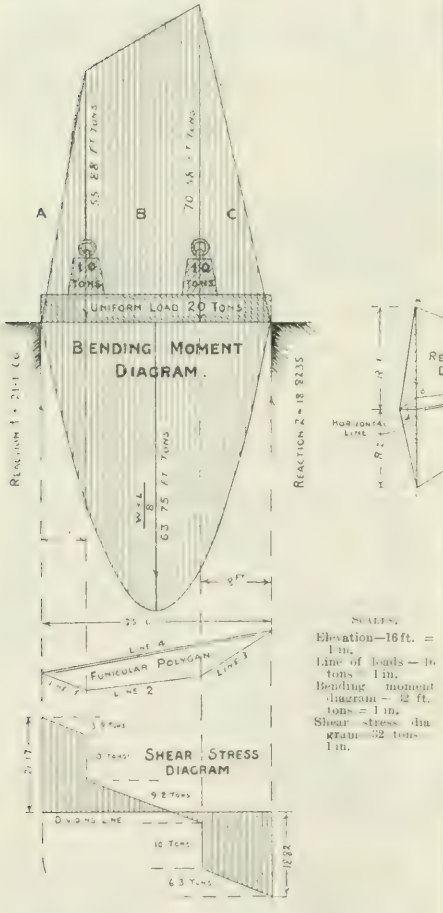
444. Strength of Shaft.—Find the relation between the stress on a twisted shaft and the moment producing it. Find the least diameter of a solid steel shaft to transmit 200 horse-power at 150 revolutions per minute, the stress being limited to 9,000 lb. per square inch.

445. Cement Testing. Sketch and describe the apparatus necessary for conducting the bushel weight and specific gravity test for Portland cement.

[The Editor is at all times glad to hear from readers who desire to submit questions regarding matters of general interest, points of daily practice, &c., for insertion in the "Assistants' and Students' Section." Questions which are published are taken into consideration, as well as other matter, in awarding the Monthly Premium.]

REPLIES TO QUESTIONS.

440. Bending Moment.—A girder, 15 in. deep and 25 ft. 6 in. span, carries a uniform load of 20 tons, and in addition a load of 10 tons 5 ft. from the left abutment and a load of 10 tons 8 ft. from the right abutment. Draw the bending and shear diagrams. ("ARIX.")



The bending and shear diagrams are shown in the sketch, the method of constructing them being as follows: Draw the elevation of the beam to scale, showing the positions of the weights. The bending diagram can then be constructed, the portions due to the concentrated loads being drawn above the beam, and that due to the uniform load below the beam. The former should be constructed first. Set down the loads to scale, 10 tons and 10 tons, as shown on the reciprocal diagram. Draw lines 1, 2 and 3 to any point O, and transfer these lines to construct the funicular polygon, thus obtaining line 4. Transfer line 4 to the reciprocal diagram from O to D, which will give the reactions due to the concentrated loads AD R·1 and DB = R·2. From D set off a horizontal line, equal to one division of the load line. In the illustration the horizontal line is made equal to two divisions, which makes the scale of the bending moment half that of the load line. Join AE, BE and CE, and construct the diagram above the beam by drawing lines parallel to these three, as shown. The uniform load is calculated by formula $\frac{W \times L}{8}$ = greatest bending moment. This will be $\frac{20 \times 20.5}{8}$ = 63·75 foot-tons. This should be set down from the centre of the beam to the same scale as the top half of the diagram. The lower portion is then found by constructing a parabola, as shown. Ordinates drawn from any point on the beam will give the bending moment at that point, the distance being scaled from top to bottom of the shaded portion, the width of the beam being neglected.

The shear stress diagram can be constructed as follows: First ascertain the reactions at each abutment—

$$\text{Reaction 1} = \frac{20}{2} + \frac{(10 \cdot 20.5) + (10 \times 8)}{25.5} = 21{\cdot}1766 \text{ tons}$$

$$\text{Reaction 2} = \frac{20}{2} + \frac{(10 \times 5) + (10 \times 17.5)}{25.5} = 18{\cdot}8235 \text{ tons}$$

Draw the dividing line as shown, and set up to scale on the left 21·1766 tons, and down on the right 18·8235 tons.

Lines should then be drawn from the points of application of the two concentrated loads, to cut the dividing line. The weight per foot-run of the uniform load is 20 ÷ 25·5 = ·784 of a ton. The dis-

[illegible] from the left abutment to the first weight [illegible] 5 ft. therefore 784 × 5 = 39 tons is the amount of shear at this point. There is then a shear of 10 tons due to the weight, and next 12·5 ft. × 784 = 98 tons. The shear due to the second weight is 10 tons, and 8 ft. × 784 = 6·3 tons is due to the remaining portion of the uniform load.

These amounts are set down, and the total shear diagram can then be drawn as shown.

The thickness or depth of the beam is not required for these calculations, unless it is required to find the stress in the flanges. For this divide the bending moment by the depth of the beam or girder.

The bending moments may be obtained in the usual way as BM for concentrated loads at first weight.

About R1 = 11·1766 × [illegible] = [illegible] pounds.
About R2 = 8·825 × 20 = [illegible] = 5·88 tons.

BM for concentrated loads at second weight.

About R1 = 11·1766 × 17·5 = [illegible] = 70·08 foot-tons.
About R2 = 8·825 × 5 = 70·8 foot-tons.

(P. H., *Middlesex*.)

SOME RECENT PUBLICATIONS.*

Local Government, 1913-1914. By A. Macmorran, K.C., and K. M. Macmorran, M.A., LL.B. Price 21s. nett. London: Butterworth & Co., and Shaw & Sons.

This volume, which is the fifth of its kind, forms a compendium of local government law for the period from September 1, 1913, to September 1, 1914. The arrangement adopted in the earlier volumes has been adhered to, the several topics being dealt with in alphabetical order, and the information as regards each topic being divided into four parts—namely, statutes, orders, circulars and memoranda, digest of cases, and decisions of the Local Government Board. The names of the authors are so well known that it is hardly necessary to say that the information is absolutely reliable as regards accuracy, while the arrangement of the work, as detailed above, renders it an easy matter for the reader to turn up any desired reference. The value of such a work to the local government official cannot well be over-estimated, inasmuch as its possession ensures that he will have at hand the latest information in regard to the complex and ever-changing branches of the law which it is his duty to administer.

In directing the attention of municipal engineers to a work of this character, we would point out that many of the topics dealt with directly affect their work. Thus, separate sections are devoted to buildings, extraordinary traffic, highways and bridges, housing, private street works, refuse removal, sewers and sewage disposal, streets, town planning, and tramways. We select at random the section on housing as an example of the scope and character of the information afforded. In the first place the two Housing Acts passed upon the outbreak of war are set out at length. These are followed by two circulars sent out by the Local Government Board; a correspondence between the chairman of the Somerset County Council and the President of the Local Government Board in regard to the housing problem in rural districts; a long memorandum of the board regarding progress and activity under the Housing, Town Planning, &c., Act, 1909; a circular dealing with the Housing (No. 2) Act, 1914; a digest of five cases; and five decisions of the board on questions submitted to them by local authorities. Similar kinds of information are given in regard to no fewer than 103 topics. This work and its predecessors should certainly be in the office of every local authority.

Woodworking Machinery: Its Use, Progress and Construction. By M. Powis Bale, M.Inst.C.E., M.I.Mech.E. (Third Edition). Price 9s. London: Crosby Lockwood & Son.

In this work the author has combined the historical aspect of his subject with the practical. In the first part of the book, in addition to notes on design and construction, the names of the chief inventors and pioneers in woodworking machinery will be found, while the latter part is devoted entirely to practical and technical details. The fact that a third edition has been called for is sufficient proof of the appreciation in which the book is held, and the opportunity has been taken not only to make a thorough revision, but also to include in the text an account of the most modern kinds of machinery, improvements in constructional details, and a series of new illustrations which will be found to embody the most recent designs in wood working. The process of converting wood by machinery is comparatively new, having developed almost entirely during the past thirty years. The gigantic strides which have been made in recent years, however, still leave plenty of scope for further progress, and Mr. Bale's comprehensive and practical account of the present position makes an opportune appearance. There are a number of excellent illustrations, and a good index which facilitates reference.

A copy of the sixth edition of the "Handbook for Farmers and Dairymen," by F. W. Woll, Professor of Animal Nutrition, University of California, has reached us from Messrs. Chapman & Hall. Valuable data scattered through American agricultural literature have been gathered in this handy little volume, and arranged in such a manner as to make them easily accessible and convenient for reference. The price of the work is 6s. 6d. nett.

Vol. viii. of "The Edinburgh Architectural Association Transactions," just issued, contains, in addition to accounts of the last three annual general meetings of that body, various interesting and instructive papers descriptive of places visited by the members from time to time in the period covered by the volume.

*Any of the publications reviewed, or referred to as received, will be forwarded by the St. Bride's Press, Limited, on receipt of published price, plus postage in the case of nett books.

CORRESPONDENCE.

Sir, though I would persuade, I'll not constrain,
Each man's opinion freely is his own
Concerning anything, or anybody.
—Massinger: "The Fatal Dowry," Act ii., 2

SANITARY SECTIONS FOR THE FRONT.

To the Editor of The Surveyor.

Sir,—Your readers will be interested to hear that orders have just been received from the War Office to send out several sections of the Sanitary Companies for sanitary duties with the Expeditionary Force. These will absorb practically the whole of the Imperial Service Company and a half of 1st Reserve Company, rendering it necessary forthwith to recruit additional men to fill the vacancies and to furnish the further sections which will be sent to the front later on. These new sections will afford opportunities for promotion to non-commissioned rank to men with good sanitary qualifications.

A large number of your readers have already come forward in response to my previous appeals, and I trust that the prospect of foreign service, and the official recognition now received of the value of the Sanitary Companies will stimulate many more to do so.

Intending recruits should apply forthwith, either personally or by letter, to O.C. Depot, Medical Units, 2nd London Division, Duke of York's Headquarters, Chelsea, S.W.—Yours, &c.,

Arthur J. Martin,
Capt., R.A.M.C.T.,
O.C., 2nd (1st Reserve) London Sanitary Co.

Duke of York's Headquarters,
Chelsea, S.W.
December 1, 1914.

CONCRETE ROADS: TRIAL SECTIONS IN KENT.

To the Editor of The Surveyor.

Sir,—Will you kindly allow me slightly to amend the particulars respecting the above published in last week's issue of The Surveyor?

Sections Nos. 1 and 2.—The concrete is not to be reinforced, except the centre joints, for a width of 3 ft.

Section 2.—The surface of the concrete is to be dressed with tar and ¼-in. clean limestone chippings, and not 1¼-in. chippings, as reported by you.

Section 4b.—The British Reinforced Concrete Engineering Company's B.R.C. fabric is to be placed 4 in. from top surface of concrete, and not 2 in. as reported.

Longitudinal expansion joints are to be provided in all the sections, and transverse expansion joints

[redacted]

H. T. Chapman.

[redacted]

Maidstone.
December 2, 1914.

PAYMENT BY COMMISSION.

To the Editor of The Surveyor.

Sir,—I see on page [redacted] of your issue of [redacted] that the surveyor of a certain [redacted] is to be paid by commission on the value of the work executed [redacted].

I should have thought it was hardly necessary to point out that to [redacted] work is contrary to law, and will render the official liable to dismissal and to be for ever after ineligible to hold office under a public authority. There is no doubt that the Local Government Board auditor on first seeing the entry of such a payment would raise the question.

The leading case on the point is *Hartley*, 1888, 21 Q.B.D., 14; 52 J.P., 806.

The orthodox way of receiving payment for work [redacted] is for a resolution to be passed by the local authority increasing the official's wages for one month by the sum of £[redacted], and the member who moved must be made of payment by commission.—Yours, &c.,

H. Gilbert Wyatt, M.Inst.C.E.

Borough Engineer's Office,
170 Victoria-street,
Grimsby.
December 1, 1914.

AN AUSTRALIAN CITY'S GIFT.

To the Editor of The Surveyor.

Sir,—It may be of interest to your readers to know that the council of this city has, among other donations, handed over, as a free gift to the Commonwealth Government, the whole of its motor traction service, comprising two 5-ton vehicles and one 3-ton vehicle, representing a value of some £2,500.

These motors are going to the Front with the First Australian Expeditionary Force in company with over 100 similar vehicles.—Yours, &c.,

E. F. Gilchrist,
City Surveyor.

Town Hall,
Prahran.
October 14, 1914.

Water for Roadmaking.—In his report for the twelve months ended March 31st last, Mr. E. F. Spurrell, borough engineer of Holborn, mentions that during the period in question the matter of the supply of water for road making purposes was considered by the council, who agreed that payment should be made to the Metropolitan Water Board of 3s. per mile per annum on the total mileage of streets in the borough in addition to the usual charge of 6d. per 1,000 gallons for water used. Under this arrangement the council have power to draw water from any of the water posts in the borough for paving purposes, thus avoiding the necessity of measuring up each repair work carried out and paying for it under the Water Board's schedule.

A Forthcoming Meeting.—The programme of the meeting of the North-Western and Northern Districts of the Institution of Municipal Engineers which is to be held at Manchester and Salford on Saturday, the 12st inst., has now been issued, and is as follows: 1.30 p.m., assemble at Mitre Hotel, Manchester; 2.30 p.m., arrive at Salford Corporation flag-making works; 3.30 p.m., leave the works; 3.45 p.m. arrive at Salford Corporation electricity works; 5 p.m., leave the works; 5.15 p.m. arrive at Salford Town Hall; 5.30 p.m., tea at the town hall, at the kind invitation of the Mayor of Salford and the respective committees whose departments are to be visited; 6.30 p.m., social in Mayor's Chamber, Salford Town Hall. Owing to the war and the commandeering of motor chars-à-banc, taxi-cabs have had to be engaged. The cost for the day's journey to the various works will be 2s. 6d. per head.

THINGS ONE WOULD LIKE TO KNOW.

(Contributed.)

It is not rather remarkable that in a recent issue of *Scientific American* there should have appeared, under the heading "Are Good Roads on Bridges Impossible?" a letter in which the writer, Mr. Albert F. Shore, of New York, deplores the fact that the paving of American bridges is so bad as to be almost impassable? What can be wrong with these bridges that their paving should be so bad? And would it not be well if the engineers responsible for this paving could inspect some of our bridges, especially the Tower Bridge, and thus learn how the carriageways of such structures should be paved?

* * * *

Will not all road makers be interested in the results of the experimental reinforced-concrete roads which are being constructed on the Dover road in Kent by Mr. Chapman, the county surveyor? Is it not a fact that if concrete can be so constructed as to make a permanent carriageway capable of carrying all descriptions of traffic without noise and without abrasion or dust, such a construction has many advantages over many other forms of construction?

* * * *

Are we not all a little astonished at the result of the Horseshoe Competition which was organised by the Roads Improvement Association? Did not some of us hope that out of the 800 shoes submitted in competition there would be at least one shoe of such paramount excellence that it would have revolutionised horse traffic, and not only have merited the 100 guineas premium, but have commanded the horseshoe market of the world? Is it not a little disappointing to find that nothing very new or startling was submitted in competition, and that the awards are given to horseshoes that are already on the market?

* * * *

Is not Mr. J. D. Watson, of Birmingham, to be congratulated on the steps he is taking to prevent the creation of a standard of purity applicable to all sewage effluents? Would not such a Parliamentary standard be impossible of application, and would not the attempt to enforce it lead to almost endless litigation?

* * * *

Does not all the correspondence which has been going on lately with reference to the training of the municipal engineer lead one to the inevitable conclusion that success or not in after life depends on the young man himself rather than upon the engineer to whom he may chance to be articled? Is it not a well-known fact that the personal equation is bound to upset the most carefully devised theories and calculations?

* * * *

"By-laws" is a term which is a veritable household word to civic engineers. Couldn't they, therefore, agree how to spell it? Some authorities have it as above, others as "bye-laws." Surely the former is correct. Among the Angles the unit group or community was a "township," corresponding to our parish. The men of the township met generally at some conspicuous natural object, such as a big stone or tree, and there they made their local rules of governance. A township was a *by*; hence the laws of the township are *by*-laws. Q.E.D.

John Burns, Hon.M.Inst.C.E.—Mr. John Burns was on Tuesday last elected an honorary member of the Institution of Civil Engineers.

Mexphalte Grouted Roads.—The Anglo-Mexican Petroleum Products Company, Limited, write: "The military activities of the last four months, necessitating heavy traffic over the roads of the country, have subjected the highways to a strain of a very severe character, and one likely to help in determining the relative efficiency of the various systems employed. In this connection the report of our representative on a road grouted with Mexphalte is of interest. In this he says: 'I have been over to Wetherby this afternoon, and seen the road I grouted when the surveyors visited us some time ago. It is a most excellent road with a perfect surface. Although there has been a lot of very heavy traffic over it in the shape of heavy guns . . . these have not left a single mark on the road so far as I could see, although they have damaged the tar-macadam.'"

LOCAL GOVERNMENT BOARD INQUIRIES.

The Editor invites the co-operation of SURVEYOR *readers with a view to making the information given under this head as complete and accurate as possible.*

INQUIRIES HELD.

Aberavon T.C. (December 1st. Mr. W. M. Cross). £937 for street improvements, £836 for new works of water supply, and £6,915 for a proposed new recreation ground and an application heard at the Jersey Beach, Aberavon.—The town clerk, Mr. E. Tennant, stated that the freehold site for the new recreation ground, consisting of 8 acres, had been presented by the corporation to the Land of Jersey. The Local Government Board had already provisionally sanctioned the carrying out of the work of the recreation ground so as to enable the council to provide work for those men thrown out of employment through the war, and had also made a promise of a grant towards the cost.

Birmingham T.C. (November 30th. Mr. R. H. Bicknell).—£19,262 for the erection of public baths in George Arthur-road, Saltley.—It was stated that the freehold of this site had been given as a gift by Lord Norton, and that the council had already sunk a borehole and satisfied themselves there was a supply of water available.

Bolton T.C. (November 24th. Mr. F. H. Tulloch). £22,495 for widening Halliwell-lane and Plodder-lane, and £6,000 for the construction of a new road from Church-road to Chorley Old-road.—The borough engineer, Mr. E. L. Morgan, submitted the details of the proposed works. The new road, he stated, would have a length of 535 yds. and a width of 42 ft. It was expected that the schemes would find employment for 120 men for a period of nine months.

Chailey R.D.C. (December 1st. Mr. R. G. Hetherington).—£5,720 for sewerage and sewage disposal works at Plumpton.—The engineering details were explained by Mr. H. Bertram Nicholls, and Mr. H. Weller, sanitary inspector, also gave evidence. It is proposed by the scheme to sewer from the top of Plumpton-lane, in the north, to Plumpton Cross, in the south, with the outfall site in East Chiltington.

Knaresborough U.D.C. (November 18th. Mr. P. M. Cruickshanks).—£1,500 for the provision of a recreation ground at Stockdale-walk, and £365 for sewerage works at Stockwell-lane and Bondend.—It appeared from the statement of the surveyor, Mr. E. Prest, that a portion of the sewerage works had already been carried out. The larger portion remaining was in connection with the sewerage at High Bondend, which it was proposed to take through Kirkham Hall estate, to include practically all High Bondend.

Stoke-on-Trent T.C. (November 26th. Mr. H. R. Hooper).—£44,000 for the purposes of the electricity undertaking.—The amount it is proposed to borrow includes £8,000 for the lighting of Fenton, £2,800 for supplying power to the Goldendale district and £14,000 which has been overspent on the new central power scheme. The board had sanctioned an expenditure of £51,000 on this scheme and £65,000 had been spent, leaving a deficit of £14,000.

APPLICATIONS FOR LOANS.

Arlecdon and Frizington U.D.C.—£3,500 for the purposes of the gasworks.

Bournemouth T.C.—£7,800 for wood paving.

Cheadle R.D.C. £2,000 for the purchase of a sewage farm.

Cockermouth R.D.C. £2,400 for works of sewerage.

Colne T.C. £5,080 for laying out Judge Fields.

Croydon T.C. £50,000 for hospital extension.

Hammersmith B.C.—£10,000 in respect of the electricity undertaking.

Hendon U.D.C.—£10,002 for the Hale-grove school.

Liversedge U.D.C.—£1,216 for laying out the market site, and £1,561 for street works.

Mansfield T.C.—£1,300 for works of sewerage.

Marylebone B.C.—£3,697, balance of the cost of the new town hall site.

Preston T.C.—£12,000 for repaving works.

Salford T.C.—£27,414 for a tuberculosis hospital.

Saxmundham U.D.C. £363 for the purchase and adaption of premises as a fire station.

Settle R.D.C. £3,400 for works of water supply.

Southampton T.C.—£1,700 for road widening and improvement.

Stone U.D.C.—£3,764 for works of water supply.

Twickenham U.D.C.—£450 for the extension of the fire station.

Ulverston U.D.C.—£10,000 for gas mains, slot meters, and cookers.

Walthamstow U.D.C. £6,507 for the purposes of the sanatorium.

Wrexham T.C.—£1,323 for sewerage and storm-water drainage.

LOANS SANCTIONED.

Barking U.D.C.—£5,220 for road widening.

Barmouth U.D.C.—£2,300 for the purchase of Cellfechan Farm.

Hebden Bridge U.D.C.—£3,500 for works of sewage disposal.

Honley U.D.C.—£1,065 for widening Honley bridge.

Isle of Wight R.D.C. £33,000 for main road improvement.

Maidstone T.C.—£1,350 for extensions at the electricity works.

Middlesex C.C.—£875 for the purchase of a site at Hanwell for a school.

Rowley Regis U.D.C.—£820 for road improvement.

Sheringham U.D.C. — £900 for surface-water drainage.

Tamworth T.C.—£700 for ferro-concrete bridges and fencing; £590 for river walls, and £110 for the purposes of the recreation ground.

Torquay T.C.—£15,860 for the electricity undertaking.

Warrington T.C.—£8,291 for the erection of a school.

Westbourne R.D.C. £1,700 for a water supply.

Victoria-street Tramway.—Westminster City Council having given notice of opposition to the proposal of the London County Council to seek Parliamentary powers for the construction of tramways from Victoria to Westminster Bridge by way of Victoria-street, the Law and Parliamentary Committee of the City Council report that the London County Council has decided not to proceed with the contemplated legislation.

Municipal Work in Progress and Projected.

The Editor invites the co-operation of SURVEYOR *readers with a view to making information given under this head as complete and accurate as possible.*

The following are among the more important proposals and contracts pending, particulars appear below:—Barking—Drainage, Lytham—Bowling and bath pavilion, Dagenham—Roads, Walthamstow—Roads, and at the Port of Manchester—Pumping, sewerage and sewage disposal, Rossington, Crediton—Water, gas and electricity—Ashington, Chard, Coventry, Sutton—Paving, other works projected will be found in the Local Government Board Inquiries, etc.

BUILDINGS.

Darwen T.C.—Tenders are to be obtained for new public baths, to be erected on the site of the Pool baths.

Deal T.C.—A public convenience is to be erected at a cost of £125.

Dundee T.C.—The city engineer, Mr. James Thomson, has prepared plans for new municipal buildings, which are estimated to cost £350,000.

Hereford R.D.C.—A scheme is under consideration for the extension of the isolation hospital, at an estimated cost of £3,573.

Lytham U.D.C.—It has been decided to construct a marine lake and open-air baths on the foreshore, and an area of about 20 acres has been acquired for the purpose from the Clifton estate. The estimated cost of the scheme is £16,000. The council have also virtually decided to purchase baths and assembly rooms on the beach, on the site of which it is intended to erect a large concert hall and baths.

Retford T.C.—The council have adopted a scheme for a joint isolation hospital.

Shipley U.D.C.—It has been agreed to construct an underground public convenience at an estimated cost of £670.

Staines R.D.C.—It has been resolved to prepare plans for a small-pox hospital in High Tree-lane.

Teignmouth U.D.C.—The council have considered the steps to be taken in connection with the proposal to provide a combined small-pox hospital for the district, and a sub-committee has been appointed to confer with the councils of neighbouring towns on the subject, the principle being approved of the expenses of the retaining and purchase of a tent hospital being based upon the population.

Torquay T.C.—It was reported at the council meeting on Tuesday that the provision of steam for pumping and heating the water for the swimming and medical baths would entail an extra expenditure for a new boiler and alterations of £250.

Wallsend T.C.—The tender of Messrs. R. & S. Tait, of Seaton Delaval, has been accepted for extensions to the hospital.

HOUSING AND TOWN PLANNING.

Ampthill U.D.C.—A committee has been appointed to report upon a housing scheme, the Duke of Bedford having offered land for the purpose at the Government valuation.

Bideford T.C.—The borough surveyor, Mr. R. E. L. Hookway, has received instructions to prepare plans and specifications for a block of twenty workmen's cottages.

Doncaster T.C.—The sanction of the Local Government Board has been received to a scheme for the erection of 102 workmen's houses at Carr House and Elmfield.

Dublin T.C.—The council are considering a scheme for the erection of forty-two workmen's dwellings in the Boyne-street area.

Helston R.D.C.—Plans are being prepared for the erection of six workmen's dwellings at Mullion and Coverack.

Leeds T.C.—The Development Committee have adopted a scheme for the erection of forty-eight workmen's dwellings on the Ivy House estate, York-road, at an estimated cost of £9,953.

Liverpool T.C.—It has been agreed to make application to the Local Government Board for permission to appropriate the Gilbrook estate, in the north end, and a site adjoining the proposed site for south end baths off Old Chester-road, Rock Ferry, for the erection of working-class houses.

Tottenham U.D.C.—The engineer, Mr. W. H. Prescott, has received instructions to prepare a scheme for erecting houses on the council's land at Lotteridge Hale.

Wallsend T.C.—It was intimated at the council meeting on Tuesday last that sanction had been granted to the application for a town planning scheme for a part of the borough.

Walthamstow U.D.C.—A scheme has been approved for building eighty workmen's dwellings, at an estimated cost of £20,000.

Watford R.D.C.—The council have approved the plans and specifications prepared by Mr. Breeds for the erection of ten cottages at Cobden-hill, Radlett.

PARKS AND OPEN SPACES.

Edinburgh T.C.—The Public Parks Committee of the council have generally approved a proposal to purchase Corstorphine Hill on behalf of the public.

Mansfield T.C.—The borough surveyor, Mr. T. P. Collinge, has been instructed to prepare plans for laying out part of the recreation ground for cricket, including the building of a pavilion.

ROADS AND MATERIALS.

Acton U.D.C.—It has been agreed to make up the back passages of Elm Park-gardens, Cecil-road, and Valetta-road.

Barking U.D.C.—A scheme, estimated to cost £8,470, has been adopted for road widening at the corner of East-street.

Battle U.D.C.—A letter has been received from the county council, stating that they would contribute to the cost of tarring the roads, whether the roads were broken up within twelve months or not. Previously they had decided that they would not contribute if the roads were broken up within a year.

Camberwell B.C.—The council have received an intimation from the London County Council of their intention to undertake the widening of Rye-lane at the junction of High-street, Peckham, at an estimated cost of £1,750, the borough council having agreed to do the necessary paving works.

Carnarvonshire C.C.—The Surveyor's Committee have several schemes of road improvement under consideration, and meanwhile work is proceeding upon the widening of Balaculyn road and repairs to the Clynnog road.

Crompton U.D.C.—Estimates are to be prepared for paving Beal-lane with granite setts, or, alternatively, with redressed setts.

Diss U.D.C.—The tender of the British Gas Light Company, at 3¾d. per gallon, has been accepted for the supply of 9,000 gallons of tar.—It has been resolved to put down Tarvia in St. Nicholas-street, Market-place, and Victoria-road.

Dudley T.C.—The Public Works Committee recommend that the widening of Downing-street and the continuation to Ednam-road be carried out, the corporation to divert the northern intercepting sewer to the line of the new street and pay Lord Dudley £914 as compensation for the land given up in Downing-street and for the loss of buildings in Downing-street and Tower-street. In consideration of this Lord Dudley is to construct the new road at his own cost, the work to be completed in two years.

East Grinstead R.D.C.—It has been agreed to carry out the improvement in the road between Summersales Hill and Withyham, and to make application to the Road Board for a grant towards the cost.

Egham U.D.C.—The council have accepted the proposal of the governors of Stroud School to construct a road at Egham-causeway, provided the council are guaranteed against any loss in the matter.

Ely U.D.C.—The surveyor, Mr. W. McKelvie, has submitted an estimate of the proposed improvement in the New Barnes-road amounting to £275.

Enfield U.D.C.—The surveyor, Mr. R. Collins, has been instructed to prepare plans for making up two roads.

Fleetwood U.D.C. Consideration is being given to a scheme prepared by the surveyor, Mr. E. Fallowfield, for improvements on the foreshore, which are estimated to cost £10,000.

Godstone R.D.C.—The highways surveyor, Mr. G. E. Crowter, recently submitted a plan of the suggested improvements from the London and Lewes main road to Godstone Green and stated that the scheme had been committed to the county council. The total cost was estimated at £1,289, of which the county council might make a contribution of £350. The council agreed that an application should be made to the Road Board for a grant towards the cost, and for a free loan.

Hebden Bridge U.D.C.—Conditional upon a grant being received from the county council, it has been agreed to carry out a scheme of kerbing, channelling and paving.

Lancaster T.C. It is intended to carry out a road widening scheme at an estimated cost of £3,200.

Leyburn R.D.C.—The Road Board have promised to make a contribution of £36 towards the cost (£100) of widening and straightening the main road from Leyburn to Richmond.

Maidstone T.C.—It is proposed to lay wood blocks in King-street at an estimated cost of £1,600.

Manchester T.C.—The plans of the new road which is to commence near Levenshulme and extend to Schools Hill, Cheadle, provide for a width of 80 ft., but a proposal has now been made that the road should be 120 ft. in width. At a meeting of the Town Planning Committee details of the scheme were considered. Several of the leading officials of the tramways department attended, but no decision was arrived at. It is understood that the Tramways Committee will consider the proposed extension from the point of view of the future use of the road for a tramway track.

Norfolk C.C.—The county surveyor, Mr. T. H. B. Heslop, submitted to the Eastern Highways Committee recently a report on the damage caused to main roads especially by motor traffic. There had been great difficulty in repairing holes and trenches without putting a fresh coating of material over the whole of the middle of the road. He had been looking about for some cheap appliance by which this mischief could be repaired economically with tar material. He had come across a little tar-boiler which answered the purpose admirably, and had been used extensively in other counties. Twenty-five of them were in use in Hertfordshire, and were highly spoken of. They cost £6 6s. each. If Norfolk bought twelve of them—seven for the eastern division and five for the western—they could be had for £6 each. He wished to be allowed to buy seven for the eastern division. The money would come out of contingencies. The committee agreed to this request.

Orsett R.D.C.—It has been agreed to improve the road from Tilbury Fort to the main Southend road, at an estimated cost of £4,034, towards which the Road Board have sanctioned a contribution of £2,943.

Panteg U.D.C.—The council have adopted the plans of the surveyor, Mr. H. R. Davies, for works of repair in Woodfield-road and Springfield-terrace.

Preston T.C.—A decision has been reached to carry out the repaving of certain streets at an estimated cost of £12,700, in the event of distress becoming acute owing to the war.

Salford T.C.—The council have decided to purchase property in Whit-lane, Pendleton, for £4,225, for the purpose of a widening scheme, and intimation has now been received that the Local Government Board have sanctioned the borrowing of the money without holding an inquiry.

Sunbury U.D.C. The Road Board have intimated to the council their consent to grant £922 towards the cost of resurfacing with Tarmac the Kingston and Staines road, the total involved being £2,767.

Uckfield R.D.C.—The surveyor, Mr. E. W. Ray-Johnson, reported lately that he had received an application to carry out work on some more roads in the Crowborough Warren for the War Office. The estimates went through the Road Board three weeks ago, and they were still at the War Office. He understood they had been approved. The Chairman of the Engineers of the second army wanted the work done at once, and wished him (Mr. Ray-Johnson) to do it. The council agreed to allow the surveyor to carry out the work after the agreement had been signed.

Wells T.C. The city surveyor, Mr. C. Parsey, reported recently that the tar-spraying of roads carried out in the city was as follows: Main roads, 44,210 sq. yds.; district roads, 30,714 sq. yds.; total, 74,924 sq. yds. The total cost was £250 19s. 3d., or 8d. per square yard. This cost included all repairs to the sprayer, and all costs incidental to the work. Alderman Richards said this was very satisfactory, and the cost was much less than previously. The mayor said that the city surveyor had reduced the cost by about 70 per cent.

SEWERAGE AND SEWAGE DISPOSAL.

Birmingham T.C. The Public Works Committee on Tuesday last obtained the sanction of the council to sewerage schemes for Adcock's Green and Erdington, the expenditure involved being £8,560.

Coatbridge T.C.—Sewerage extensions are to be carried out at an estimated cost of £1,100.

Crediton U.D.C.—The Local Government Board have written to the council stating that the board are unable to assent to postponement of the Fordton pumping scheme in connection with the sewerage undertaking, the carrying out of which the loan for the purchase of Lord's Meadow was sanctioned.

Croydon T.C.—The corporation have decided to carry out sewerage works and surface-water drainage, at an estimated cost of £950.

Manchester T.C.—The council on Wednesday last agreed to take over the Stockport Corporation sewage works and lands adjoining, having an area of over 94 acres, and to connect the works with the city system of sewerage.

Seisdon R.D.C.—The new sewage outfall works at Autherley, which were formally inspected by the members of the council last week, were designed and constructed by Mr. W. Cannan, district surveyor and engineer, with direct labour, to deal mainly with the sewage from the Aldersley-lane, Sandy-lane, and Codsall-road area of the Wrottesley parish. The members of the council expressed to Mr. Cannan their satisfaction with the design, construction and working of the plant.

WATER, GAS, AND ELECTRICITY.

Ashington U.D.C. A decision has been reached to apply to Parliament for power to provide a water supply, at an estimated cost of between £60,000 and £70,000.

Chard T.C.—Consequent upon a letter from the Local Government Board pointing out that the question of the water supply had been under the consideration of the council for many years, it was decided on Tuesday last to call a special meeting to reconsider the recent decision to defer the construction of waterworks.

Coventry T.C.—The council on Tuesday last sanctioned an expenditure of £55,897 for new plant at the electricity works.

Dalbeattie T.C.—A scheme has been approved for the extension of the reservoir, at an estimated cost of £900.

Lurgan U.D.C.—A resolution has been passed to apply in the next Session of Parliament for authority to purchase the undertaking of the Lurgan Gas Light and Chemical Company.

Market Harborough R.D.C.—It is proposed to carry out a water supply scheme for Fleckney.

Skipton R.D.C.—The council have approved the scheme of the surveyor, Mr. A. Rodwell, for a water supply for Ingleton, at an estimated cost of £3,400.

Wootton Bassett R.D.C.—Expert advice is to be obtained with a view to providing a proper water supply for Pavenhill.

MISCELLANEOUS.

Derry T.C. The city surveyor has submitted a report on possible relief works, in which he recommended (1) the laying of a sewer in Strand-road from the foot of Duncreggan-road to the Rock-road; estimated cost, £160, of which about £130 would be spent in wages. (2) The construction of a high-level inter-

replacing sewer from the foot of Croggan road along the Lone Moor road and through the G.N.R. line to the river; this would prevent flooding from rainfall; estimated cost £2,000, of which £1,100 would be expended in labour. (d) The construction of a filter bed at Farnley mill to the Burnsgibagh water to pass through a sand covering the reservoir; estimated cost, £350; £200 being for wages. (e) The rebuilding of part of the cemetery wall on the Lone Moor road; estimated cost, £350, of which £200 would be in wages. This report has been forwarded to the Relief Committee to ascertain what grants could be obtained for the purpose of carrying out these works.

Huddersfield T.C.—It is the intention of the council to extend the tramways to Brighouse, *viâ* Rastrick, in order to link up the Huddersfield system with the Halifax and Bradford tramways.

PERSONAL.

Mr. William Hendry has been appointed burgh surveyor of Buckie at a salary of £150 a year.

Mr. R. P. Pearce, surveyor and inspector to the Meole-brace Urban District Council, has had his salary increased by £25 a year.

Mr. W. Smith, of Monmouth, was on Tuesday last appointed borough surveyor and inspector of Monmouth at a salary of £150.

Mr. A. S. Lilley, surveyor to the St. Helens (Isle of Wight) Urban District Council, has been appointed waterworks engineer to the Portland Urban District Council.

Mr. Percy G. Cocks, second assistant engineer to the Wandsworth Borough Council, has been appointed surveyor to the St. Helens (Isle of Wight) Urban District Council.

Mr. Nicol, road surveyor to the Garioch District Committee of the Aberdeenshire County Council, has had his salary increased by £20 a year, with additions of £10 annually until £200 is reached.

Mr. G. A. Ballard, ASSOC.M.INST.C.E., assistant borough engineer of Guildford, has received an honorarium of £20 in acknowledgment of the services performed by him during the four months pending the appointment of a borough engineer.

Mr. George Gledhill, late surveyor to the Balby-with-Hexthorpe Urban District Council, was on Wednesday last offered the position of assistant borough surveyor of Doncaster, with charge of highways and sewers. Balby is now incorporated in the Doncaster municipal area.

Mr. Henry Card, formerly county surveyor of East Sussex, died, we regret to state, on November 27th, at the advanced age of ninety-six. The funeral, which took place on Tuesday at Lewes, was attended, among many others, by Mr. F. J. Wood, the present county surveyor of East Sussex.

Mr. G. Bertram Kershaw, M.AM.SOC.C.E., has been elected a member of the Institution of Civil Engineers. Messrs. N. S. Bowes, council offices, Sale, Manchester, A. T. Hobbs, city engineer's department, Birmingham, and W. H. Thompson, municipal offices, Kilburn, N.W., have been elected associate members, and Messrs. L. G. H. Major, resident engineer's office, Suva drainage works, Suva, Fiji, and A. D. Wright, council offices, Prestwich, Manchester, have been admitted as students of the same body.

The Nottingham Port Scheme.—In view of the fact that practically no unemployment exists at Nottingham, and no undue amount is probable, the Government has withdrawn its offer of £50,000 towards the cost of deepening the river Trent between Nottingham and Newark in order to make Nottingham an inland port. The city council has, notwithstanding, decided to proceed with the scheme.

A Housing Scheme at Newcastle.—At the meeting of the Newcastle City Council on Wednesday, the Housing Committee brought forward a scheme for developing 16¼ acres of the city's Walker estate by erecting 400 houses of various types, each with a garden, at a cost of £67,000, the rents being from 4s. 3d. to 7s. 6d. It was stated that there was absolutely a famine in such houses. The principle of the scheme was approved, but it was referred back on questions of detail.

FOR OTHER ADVERTISEMENTS

See End of Paper.

A BERTILLERY URBAN DISTRICT COUNCIL.

TEMPORARY ASSISTANT SURVEYOR AND DRAUGHTSMAN

Wanted, temporarily, as Assistant Surveyor and Draughtsman in the Surveyor's Department. The person appointed must be a rapid draughtsman and accurate surveyor and leveller, with previous experience in a Municipal Office. Wages, £2 5s. per week. Providing his services are satisfactory, he will be engaged until the return of the present assistant, who is on Active Service.

Applications, endorsed "Assistant Surveyor," stating age, qualifications and previous experience, accompanied by copies of three recent testimonials, must reach me not later than Wednesday, 16th December, 1914.

LIONEL D. LEWIS,
(2,141) Engineer and Surveyor.

WANTED, by an Engineer and Surveyor to a town in the Midland, a thoroughly competent man to survey and bring up to date the Ordnance Sheets. Applicants should be competent to lay down minor triangulations, and be neat draughtsmen, and expeditious in their work.

Wages, 45s. per week. To a suitable man the duration of the work will not be less than 12 months. Full particulars, in own handwriting, stating age, &c., to Box 1,492, office of THE SURVEYOR, 24 Bride-lane, Fleet-street, E.C. (2,142)

A BOROUGH ENGINEER (N.R., Yorks) has a vacancy for young gentleman as pupil.—Box 1,490, office of THE SURVEYOR, 24 Bride-lane, Fleet-street, E.C. (2,140)

WANTED, Surveying Assistant (temporary) for a Lancashire Borough Surveyor's Office; fully qualified; one with municipal experience preferred. Salary, £2 per week. Address, with copies of three recent testimonials, Box 1,493, office of THE SURVEYOR, 24 Bride-lane, Fleet-street, E.C. (2,143)

REFUSE DESTRUCTOR.

The time for receipt of Proposals by the Municipal Commissioner for the City of Bombay has been extended to the 7th March, 1915, for the complete Manufacture, Erection and Equipment of a Refuse Destructor within the City for the incineration of 200 tons of refuse per day.

A copy of the Particulars and General Conditions for Tenderers, and Plan of the proposed Site, can be obtained on payment of five shillings, which will not be returned, from Messrs. Henry S. King & Co., 65 Cornhill, London, who will also give inspection of the Schedule of Rates for Materials and Labour prevailing in Bombay.

P. R. CADELL,
Municipal Commissioner for the City of Bombay.

Municipal Office,
Bombay, India. (2,144)

REIGATE BOARD OF GUARDIANS.

SUPPLY OF GRANITE OR BASALT SPALLS.

Tenders are invited for the Supply of 50 tons of Granite or Basalt Spalls, for breaking, delivered, carriage paid, at the Guardians' Institution, near Earlswood Station (L.B.S.C.R.).

Persons tendering must state how soon the material can be delivered, and send Samples of the same to the Master of the Institution, Earlswood Common, Redhill.

Tenders to be delivered to me in sealed envelopes, endorsed outside "Tender for Stone," on or before Monday, the 14th December instant.

The Guardians do not bind themselves to accept the lowest or any Tender.

FRANK C. MORRISON,
Clerk to the Guardians.

46 High-street,
Reigate
December 3, 1914 (2,145)

Institution of Municipal and County Engineers.

WEST MIDLAND DISTRICT MEETING AT BIRMINGHAM.

A meeting of members of the West Midland District of the Institution of Municipal and County Engineers took place in the Council House, Birmingham, on Thursday last week. The meeting of the District took the form of a social meeting, and a paper by Mr. E. J. Goodacre, Assoc.M.Inst.C.E., borough surveyor of Shrewsbury, on "Timber and its Relation to the Building By-laws," was read and discussed. Mr. A. D. Greatorex (West Bromwich) presided, and there were also present Messrs. F. A. Bring (Birmingham), W. H. A. Cary (Sutton Coldfield), H. J. Coleby (Atherstone), F. C. Cook (Nuneaton, late district secretary), J. Gunstone (Dudley), C. J. Gettings (Worcester), W. H. Jukes (Tipton), C. E. Lawton (Birmingham), J. Monnot (Staffordshire), R. C. Moon (Nuneaton), A. E. Newey (Foleshill), W. Osborne Pope (Malvern), A. S. Parsons (Birmingham), W. Plant (Stafford), H. Richardson (Birmingham), Sholto Douglas (Kenilworth), H. E. Stilgoe (Birmingham), C. F. Wike (Sheffield) and W. P. Young (Walsall) (members); L. J. Goodacre (Shrewsbury), H. W. Lawson (Birmingham), A. G. Tonge (Birmingham) and E. W. Turner (Birmingham), (associate-members); and P. A. Benn (Lichfield) and R. F. Tabor (Shrewsbury), visitors.

The Chairman read a letter from Mr. A. T. Davis, county surveyor of Staffordshire (district chairman), apologising for his absence, owing to military duties.

Mr. Dan [illegible] Meeting [illegible] the proceedings [illegible] I am not [illegible] in moving that Mr. [illegible] and the Institution [illegible]

ELECTION OF DISTRICT COMMITTEE.

The meeting then proceeded to the election of the District Committee for the year.

Mr. F. C. Cook, district secretary, stated that Mr. W. B. Chancellor, Lichfield, had left the district, and Mr. Goodacre had removed from Nuneaton to Shrewsbury.

The following were elected:—

Warwickshire.—Messrs. Sholto Douglas (Kenilworth), J. Willmot (Warwickshire), H. H. Richardson (Birmingham), A. R. Gray (Birmingham), and H. J. Coleby (Atherstone).

Worcestershire.—Messrs. C. F. Gettings (Worcestershire) and F. Woodward (Stourbridge).

Staffordshire.—Messrs. A. D. Greatorex (West Bromwich), H. J. Clarson (Tamworth), G. Green (Wolverhampton), W. Plant (Stafford), and R. Blanchard (Cannock).

Shropshire.—Messrs. G. C. Lacey (Oswestry) and E. J. Goodacre (Shrewsbury).

Herefordshire.—Mr. W. Jack (Hereford).

TIMBER AND ITS RELATION TO THE BUILDING BY-LAWS: DISCUSSION OF MR. GOODACRE'S PAPER.

Mr. W. PLANT (Stafford) proposed a vote of thanks to the author of the paper. There was very little in the paper with which any of them would be disposed to quarrel. It contained a good deal of very useful information. In regard to the bearing of bressemers, it was a fact that a great many builders provided the 4 in. asked for in the by-laws on the bearing only, splaying the ends off, as stated in the paper. It seemed a very short-sighted policy, as the saving was very small. Mr. Goodacre's experiments as regarded dry rot were very valuable. It would be interesting to them to know how he succeeded in introducing dry rot in three days; it seemed a particularly short period in which to set it up. He would also like to know whether he had formed any opinion as to how its recurrence could be prevented when replacing the woodwork. He had a case very similar to that shown in the paper in which the dado of a room was absolutely permeated throughout. He wanted to know how the mycelium could be detected, and if the wood affected was entirely removed, whether the germs of dry rot which might remain on the walls could be destroyed by spraying with chemicals, or in any other way. It would certainly appear desirable to ventilate the underside of the floors by means of a flue, but he was afraid it was very seldom done. In reading the by-laws literally as to the opening of windows, he thought it was pretty clear that one half of the window should open and not an area of one-twentieth of the floor space. As to Mr. Goodacre's suggestions with regard to staircases, he thought the builders did often fail in regard to the construction of staircases of small houses where they were cramped for room. He had come across cases where the builder had actually encroached upon the upper landing with the top step. He would add to the suggestions made by the author in his paper with regard to staircases that they should not open out of the living-room, a practice often adopted in small property.

Mr. A. S. PARSONS (Birmingham) said he would second the vote of thanks to Mr. Goodacre for his paper; but, all the same, he wanted to quarrel with him. It was in connection with this practice of cutting the deals forming the bressemer on the splay. Mr. Goodacre said it was a common practice, but, personally, he had not come across it. Perhaps the builders in Birmingham were better than in other towns. But it did not weaken the bressemer to splay the end off at an angle of 45 deg. The only way in which the bressemer could be cut off would be on a vertical shear. The strength of the vertical shear was equal to twice that of the horizontal shear; it had only one-half to two-fifths of the resistance on the vertical shear. Therefore, even 9½ in. deep, the beam was twice as strong vertically with 4 in. bearing than it was horizontally, and for that reason they could cut off at 45 deg. without impairing the stability. Then Mr. Goodacre said the site should be covered with at least 4 in. of cement concrete. He thought they were all agreed that that was desirable, but he believed the cost of it was prohibitive; certainly 4 in. of concrete made 5 to 1 would cost a guinea a cube yard, and put a considerable amount on the cost of a house. The by-laws in Birmingham allowed of some choice. They provided that where the dampness of the site shall render the precaution necessary the whole site shall be covered with a layer of good cement concrete. He did not think it was necessary or desirable to make the covering of the site with cement concrete. They had in Birmingham a by-law to regulate the stability of floors and roofs. The omission of that power had caused them some trouble, and the Birmingham Corporation applied to the Local Government Board this year for powers to enable them to regulate this matter, and had by-laws sanctioned which he would read: "Every person who shall erect a new building shall cause every roof of such building to be constructed and supported in such a manner as to secure due stability. Every person who shall erect a new building shall cause every floor of such building to be so supported, and every floor thereof the structure of which is not regulated by the by-laws of 1910 to be so constructed as to secure due stability." That was a by-law giving very wide powers; whether it was a new one he did not know. It certainly empowered them now to say exactly how a roof should be constructed, and it gave them power to decide what was due stability both for roofs and floors. They found the power very valuable indeed.

The CHAIRMAN (Mr. Greatorex): May I ask whether those by-laws are granted under the Private Act of the Birmingham Corporation?

Mr. PARSONS: I am not prepared to say. I do not think it is. The print says allowed by the Local Government Board.

The CHAIRMAN: Is that passed by the Local Government Board through some clause in the Private Act?

Mr. PARSONS: No. I do not think so. There was nothing at the end of the by-law making that reservation. He imagined it was a new by-law, but he was not certain. He was bound to say that he admired the author's ingenuity and his research in inoculating these samples of material with *merulius lachrymans*. He, like Mr. Plant, was surprised at

timber.

with the suggestion in the paper that a fireclay

amended. He thought, generally speaking, that

cerned, were needless. One had to carry the party walls at the same thickness right through the roof

perty in which, so far as his experience went,

with Mr. Goodacre as to the absolute neces-

own by-laws in Nuneaton were redrafted some five or six years ago, and he had a great deal of difficulty in persuading the committee to agree with

provision for from 4 in. to 6 in. of concrete under boarded floors, and under brick floors, so largely used in kitchens, that a layer of ashes should be provided. The suggestions Mr. Goodacre made in regard to staircases were, he thought, extremely valuable. Dangerous staircases, so far as their pitch was concerned, were due very largely to the cramping of the frontage. In his district there was a local custom which was very difficult to break through, by which nearly all houses for the working classes were built in pairs, with a frontage of 30 ft.—15 ft. each—less 3 ft. for an entry. The staircases were nearly always run parallel to the frontage of the building; so, obviously, there was very little room to get a proper tread in. One was constantly hampered in many cases by local customs of this sort. As Mr. Goodacre knew, the Local Government Board had issued by-laws made under the Public Health Act of 1891, providing for the scantlings of floors, roof timbers, and so on. He had not been able to induce his committee to adopt those by-laws; but, to his mind, they were extremely valuable.

Mr. W. A. H. Clarry (Sutton Coldfield) said the question which had been puzzling him all the time —was it from the Model By-laws, or from a code of by-laws actually in operation? He had with him a code of by-laws made in 1901 which was taken from the Local Government Board Model By-laws, but it had had most of the points Mr. Goodacre had mentioned. There were eight or nine pages dealing with the diameter of staircases, but he must say that the by-laws as to staircases were not so good as those mentioned by Mr. Goodacre. It did not give one the rise of the stairs, but the size of the diameter. The question which interested him most in the paper was that of dry rot. He wished Mr. Goodacre could solve the problem how to detect the mycelium in timber which was going to be used in the erection of houses. In places where there were 200 or 300 houses going up at the same time this was a serious matter. Some of the best architects in Birmingham who had built their own houses in his district had experienced the worst trouble with dry rot of anyone in the borough. He knew the case of a very prominent Birmingham architect who had had to take the timber out three times. If architects could not find out and detect dry rot, he feared it would be a very difficult thing for the surveyor to detect it with the many claims upon his time. Then as to the question of window opening. Surely they could not put a window in of more than one-tenth of the floor area, and compel the owner to make it open more than one-twentieth of that area. If he put it larger than that it was his own lookout. He must admit that he was disappointed in the paper in one respect. They had heard so much about cheapening the cost of building cottages and dwellings for the working classes, that he came quite prepared to hear some remedy for cheapening the building of workmen's cottages. That was particularly interesting to him at the present time, as he was trying to get out plans

cult matter. It appeared that they required some alteration in the by-laws. The only alteration he could see to be possible at the present time was to reduce the height of rooms, which were now 9 ft. for

could be brought down to 8 ft., or 8 ft. 6 in., it would reduce the cost of building working men's houses. To try and cheapen the cost in any other way was almost an impossibility. The author had not given them all the powers which were required in by-laws in regulating the use of wood. They could put in their joists to comply with the by-laws, but there was nothing to say a man should not put in ¼-in. matchboard on the top. He knew a whole street of houses which were built with ⅜-in. matchboard, and the legs of the bedsteads went through the floors, and to prevent that the joists were marked so that the bed could be put over the joists. He had a case in which they were trying to erect some cottages for £120 or £130, and the architect was trying every move to bring the cost down. As these houses were 5 miles away from the office it meant three or four

There was a large living room, where the whole of the cooking would be done, and the family would be living in that room until they went to bed at ten or eleven o'clock at night. It was not intended to put any ceiling in that room; and there was nothing in the by-laws to compel the putting in of a ceiling. After that house had been used all day the bedroom above would not be very savoury. To show that ceilings were required in the scullery, where there would be a little steam from the family washing, he put a ceiling in; but in the living-room he did not. There was no by-law as to how windows should be constructed. The windows they put in these cheaper houses were put together anyhow with nails or tacks, and they had to be careful that they did not come undone. In many cases they opened ¼ in. while they were putting them in. The same thing applied to the doors and the roofs. The only way to get a watertight roof was to let them put it up and then get the tenant to complain and have it condemned under the sanitary by-laws. There was nothing in the by-laws that there should be an impervious roof. He was not so certain about the layer of concrete over the site. He thought they would find that many medical men and medical officers of health thought it was well for the site to breathe. If they had a good subsoil it seemed to be a good thing to leave the concrete off. He had found it so with a gravelly subsoil. If the drains were watertight they got no leakage under the floors, and it seemed to him the concrete was not necessary. It should be left to the discretion of the surveyor, and if the surveyor thought it necessary, a layer of concrete 6 in. thick should be laid.

Mr. W. Plant (Stafford) said he did not agree that concrete over the site of houses might be omitted. He would tell them what happened some time ago in his own house, the site of which was not concreted. A bad smell was noticed in one of the rooms; the drains were opened out and found to be leaking. The drains had become blocked, and, acting under pressure, they leaked at the joints, so that the ground under the house was permeated with sewage. For that reason, if for no other, it was essential that they should have concrete under the houses. It need not necessarily be 5 to 1 concrete, as suggested in the paper; it might go up to 8 to 1. He was surprised to hear Mr. Clarry say that their by-laws specified the dimensions, joists, &c. His council had put in the dimensions in their new by-laws, but they were struck out by the Local Government Board.

Mr. H. J. Coleby (Atherstone) thought Mr. Goodacre was deserving of great credit. He supposed he had not tabulated any of his results as to dry rot in various beams. He did not think he could agree with the other speakers as to the provision of concreting under floors. He thought it was a very necessary provision in every case. He was certain the dry rot in timber was worse where they had a damp condition, and if they had a floor without any protection by concrete, they were bound to get damp under that floor at some time or other. He did not think there was any soil but had some damp in

[illegible], and even with sand or gravel there must be damp conditions with a heavy rainfall after a dry period. The [illegible] and they get the damp [illegible] driven up into the house. As to the [illegible] did not be supposed there was no cure. The question was Why one [illegible] at all? He thought [illegible] something else, and put in [illegible] or expanded metal, or something of that kind. He thought it would be worth trying at any rate.

Mr. C. P. Gettings (Worcestershire) said he had been particularly interested in one or two of the points raised in the discussion of the paper. One raised by Mr. Clarry was with regard to the height of rooms. Mr. Clarry said that the minimum height under their [illegible] at Sutton Coldfield was 9 ft. It struck him that was rather excessive; in many towns the minimum height was only 8 ft. If they were compelled to build the rooms of an ordinary artisan's house to 9 ft., it did add very considerably to the cost. There was one point in Mr. Goodacre's paper where he referred to giving greater power to surveyors. Personally, he did not think that was desirable at all. He generally found that [illegible] had sufficient opportunity to know the ones upon him to do [illegible] what was the absolutely correct thing to do would place him in a serious position. That, he thought, should be decided by the higher authorities.

The Chairman (Mr. Greatorex) said he was sure Mr. Goodacre must feel gratified with the discussion which had taken place upon his paper. Personally, he thought it had been of advantage to all of them. He would like to add his thanks to Mr. Goodacre for coming forward and keeping their session going at this particular time. He rather agreed with Mr. Gettings as regarded the putting of too much power in the hands of those who had to deal with by-laws. The Local Government Board were not inclined to leave it an open question as to how by-laws should be dealt with by surveyors, but were very strong in having codes which set down what should be done and not done. He agreed that it should be definitely laid down in the by-laws rather than they should have more difficulties than they had at the present time. The paper was very interesting, particularly to those who had to carry out the building by-laws and had to deal with building in the various towns. Mr. Gettings had very kindly promised to read a paper on road construction at a meeting to be arranged after Christmas. This, he felt, would be a very interesting paper, because none of them had finished learning on the subject of road construction.

Mr. Goodacre, in reply, thanked the members for the way in which they had received his paper, and replied to one or two points raised in the discussion. Mr. Plant asked the method of carrying out the tests for dry rot. He might say that they were carried out in a cellar in which the mycelium abounded. The pieces of wood were placed in a convenient position, such that the mycelium could be drawn on to each specimen. He hoped to be able to give further particulars later in the *Journal*, as suggested by Mr. Coleby. They had now been there for three months. Mr. Plant referred to a dado which [illegible] attacked by dry rot, and asked whether he could make any suggestions as to treatment. The only thing he could suggest was to get at the root of the trouble, cut away all the infected timber, and coat any adjacent woodwork with a strong solution of copper sulphate or sulphuric acid. Then measures should be taken for prevention, ensuring that the floor and dado were well ventilated and free from damp. Then, as regarded the opening of windows, he might be wrong, but it always seemed to him that this by-law was very ambiguous as to whether the opening should be one-twentieth of the floor area or one-half of the window. They had the case of a builder who constructed a very large window and then opened only a small portion of it, equal to one-twentieth the floor area. He very much doubted whether it actually complied with the by-law.

A Member: I think the by-law is very clear: it certainly says one-half of the window.

Mr. Goodacre: Then, coming to Mr. Parsons, he was very interested in his theory as to vertical and horizontal shear in floor joists and beams, and quite agreed with him in the application of this theory to such structural material as steel; but when they applied this to timber they had to deal with a different material, because it was very liable to shakes, large knots, and other defects, and he did not think the economy in timber was worth the risk of cutting away the ends of joists on the splay. Then as to concrete under floors. He was perfectly convinced that concrete should be under all floors. It was only a cost of about £3 for the average cottage; on the other hand, if they did get dry rot afterwards they could soon spend £3 in putting in new floors. Birmingham was fortunate in having by-laws regulating the strength of floors. Mr. Clarry also mentioned the Model By-laws. He might say that he obtained the Local Government Board draft Model By-laws as recently as last October, and they were the basis of his criticism. With regard to the detection of dry rot, that was a difficulty. He did not think that dry rot could be detected in many cases when the beam was being fixed. The chief point was to take every precaution, so that if dry rot was latent in the timber it should not be allowed to develop. With regard to the building of cheap houses, he was sorry that he had not put anything in his paper to lessen the cost of erection of dwellings. He thought, however, his suggestions would tend to make them more sound without materially increasing the cost. The only way to cheapen dwellings was economy in design, and he thought some by-laws might be relaxed with this end in view, but not those with regard to timber. With regard to Mr. Gettings' remarks as to discretionary powers being left in the hands of the surveyor, he opined in these extraordinary circumstances some standardised formula with a coefficient obtained by actual experiment might be used to ascertain the size of floors, joists, &c. It seemed quite unnecessary to specify for every different case that might crop up.

METROPOLITAN WATER BOARD ENGINEERSHIP.

MR. RESTLER APPOINTED.

Mr. James William Restler, M.Inst.C.E., M.I.Mech.E., was on Friday last appointed, at a salary of £5,747 per annum, chief engineer to the Metropolitan Water Board, in succession to Mr. W. B. Bryan, deceased.

Mr. Restler, who was born in 1851, was educated at a private school and King's College. He was chief engineer to the Southwark and Vauxhall Water Company from 1883 until the formation of the Metropolitan Water Board in 1904, when he was appointed chief deputy to Mr. Bryan. The works constructed under Mr. Restler's direction consisted of engines capable of raising 140,000,000 gallons per day, reservoirs to contain 1,800,000,000 gallons, filter-beds having an area of 40 acres, five tunnels under the Thames, and various deep wells, and other works representing an expenditure of over £2,500,000. The vast reservoirs at Honor Oak and other works at Chingford were also completed during Mr. Restler's tenure of office.

It should be stated that the salary of the office of chief engineer is £2,500, and that the remainder of the sum to be received by Mr. Restler consists of £3,247 per annum compensation accruing to him for the abolition of his office as engineer to the Southwark and Vauxhall Water Company. Mr. Restler possesses every necessary qualification for such an important post as chief engineer to the Metropolitan Water Board, as in the words of the report presented to that authority by the Works and Stores Committee, he has obtained "an unrivalled knowledge and experience of the London water question." It was, the committee added, with the utmost confidence that they proposed his appointment.

Rhymney Valley Sewerage.—The Rhymney Valley Sewerage Board have accepted the tender of Messrs. Barnes, Chaplin & Co., Cardiff, at £62,792, for Contract No. 2 of the extension works from Tynycoed to Pontlottyn Bridge.

A Glossary of Road Terms. By H. Percy Boulnois, M.Inst.C.E. Price 2s. nett. The St. Bride's Press, Limited, 24 Bride-lane, E.C.—The compiler of this road vocabulary says in his modest introduction: "Someone had to make a start," and it cannot be denied that with the thousand and more words he has collected a very good start has been made. . . . Every reader of the glossary will recognise the industry of which proof has been given in its compilation, and due credit will be awarded for the courage and independence shown in the definition of some terms which have hitherto been the subject of much heated discussion.—*Sanitary Record.*

SUPERVISION AND MAINTENANCE OF RURAL MAIN ROADS.

WILTS COUNTY SURVEYOR'S PROPOSALS.

[illegible] of Wiltshire Mr. J. G. P[illegible] and attending to the Roads and Bridges Committee suggested that the responsibility for superintending the [illegible] of the maintenance of certain [illegible] roads be entrusted to the County Surveyor. [illegible] would be necessary to appoint [illegible] men, and the County Surveyor would be responsible for the [illegible] of the work. [illegible] would be carried out [illegible] and would [illegible] the [illegible] of about [illegible] miles of main roads. [illegible] would be [illegible] to [illegible] the [illegible] of the district [illegible] would be [illegible] to [illegible] the [illegible] of the district [illegible] would be [illegible] to [illegible] the [illegible] of the district

CITY ENGINEER AND SURVEYOR January 31st, 1913.—Port-of-Spain Corporation £725, inclusive of travelling allowance.—Mr. Joseph Arnold Lamy, town clerk, Town Hall, Port-of-Spain, Trinidad, B.W.I.

DRAUGHTSMAN CLERK.—Survey Department of the East African Protectorate. £160—£205, and house allowance £40.—Crown Agents for the Colonies, 4 Whitehall-gardens, London, S.W.

ENGINEERING ASSISTANT.—Corporation of Newport, Mon. £2 2s. per week.—Mr. H. Trevithick, borough surveyor and water engineer.

MUNICIPAL COMPETITIONS OPEN.

OFFICIAL AND SIMILAR ADVERTISEMENTS RECEIVED UP TO 4.30 P.M. ON THURSDAYS WILL BE INSERTED IN THE FOLLOWING DAY'S ISSUE, but these are not posted to their despatch are recommended to arrange that they shall reach THE SURVEYOR office by noon on WEDNESDAYS to ensure their insertion in the weekly list of competitions. Such advertisements may, in cases of emergency only, be telephoned (City No. 1046) subject to later confirmation by letter.

BEDS.—December 7th.—Designs for a secondary school, for the county council.—Mr. W. W. Marks, clerk, Shire Hall, Bedford.

DUMFRIES.—December 31st.—Competitive plans for workmen's dwellings, for the Dumfries Corporation.—Town Clerk.

LIVERPOOL.—February 8th.—Designs for working-class dwellings, for the corporation. Premiums, £100, £50, and £25.—Mr. E. R. Pickmere, town clerk.

BRADFORD.—Designs for the re-planning of streets in the central area of the city, for the corporation.—Mr. Reginald Bloomfield, R.A., has been appointed assessor.—Mr. F. Stevens, town clerk.

MUNICIPAL CONTRACTS OPEN.

OFFICIAL AND SIMILAR ADVERTISEMENTS RECEIVED UP TO 4.30 P.M. ON THURSDAYS WILL BE INSERTED IN THE FOLLOWING DAY'S ISSUE, but these are not posted to their despatch are recommended to arrange that they shall reach THE SURVEYOR office by noon on WEDNESDAYS to ensure their inclusion in the weekly list of competitions. Such advertisements may, in cases of emergency only, be telephoned (City No. 1046) subject to later confirmation by letter.

Buildings.

BILLINGE.—December 7th.—For constructing a borehole for water supply purposes, for the urban district council.—Mr. A. Darlington, clerk, Council Offices.

HANTS.—December 7th.—For the erection of a school, for the county council.—Mr. A. L. Roberts, architect, The Castle, Winchester.

SHEFFIELD.—December 7th.—For the erection of a school medical department, and alterations to a school building, for the Education Committee.—City Architect, Town Hall.

ARKLOW.—December 7th.—For the erection of 100 houses, for the urban district council.—Mr. L. O'Toole, Main-street, Arklow.

STAFFS.—December 8th.—For the erection of a council school, for the county council.—Mr. Graham Balfour, director of education, County Education Offices, Stafford.

BARNES.—December 8th.—For building a dispensary and tuberculosis wards at the hospital, South Worple Way, for the urban district council.—Mr. G. Bruce Tomes, surveyor.

BIRMINGHAM.—December 9th.—For alterations to public baths, for the Baths Committee.—Mr. R. Hoggin, superintendent engineer, Kent-street.

GRIMSBY.—December 9th.—For additions to the public library, for the corporation.—Mr. H. G. Whyatt, borough engineer and surveyor.

LEEDS.—December 9th.—For building an administrative block at the small-pox hospital, for the corporation.—Mr. W. T. Lancashire, city engineer.

ST. THOMAS.—December 10th.—For the construction of waterworks, for the rural district council.—Mr. S. R. Lowcock, 6 Queen Anne's-gate, Westminster, S.W.

PEMBROKE.—December 10th.—For the erection of a school, for the Education Authority.—Mr. O. T. Thomas, architect, County Education Offices, Haverfordwest.

LAMBETH.—December 10th.—For the repair and renewal of iron gutters, for the borough council.—Mr. H. Edwards, borough engineer, Town Hall, Brixton-hill, S.W.

NORTHWICH.—December 10th.—For the erection of a school, for the Administrative Sub-committee of the Northwich District.—Mr. A. E. Powles, architect, 7 Winnington-street, Northwich.

WEST BROMWICH.—December 11th.—For the erection of a school, for the Education Committee.—Messrs. Wood & Kendrick, architect, High-street.

PONTYPRIDD.—December 14th.—For the erection of a school, for the Education Committee.—Mr. W. E. Lowe, engineer and surveyor.

KIDDERMINSTER.—December 14th.—For the construction of about 3 miles of cast-iron water mains, pot-hydrants, 4-in. and 3-in. diameter, valves, headgates, meters, and meter chambers, for the rural district council.—Mr. W. Fiddian, engineer, Stourbridge.

KIDDERMINSTER.—December 14th.—For providing, laying, and jointing 1,587 yds. of 3-in. cast-iron water mains, and other appurtenant works, for the rural district council.—Mr. G. J. Shepherd, engineer, 85 Chester-road, Kidderminster.

LEITH.—December 14th.—For additions to the Academy, for the School Board.—Mr. G. Craig, architect, 85 Duke-street, Leith.

WALTHAMSTOW.—December 14th.—For alterations to a school, for the Education Committee.—Mr. H. Prosser, architect, High-street.

SOUTHEND.—December 14th.—For the erection of an electricity sub-station and incidental works, for the corporation.—Mr. E. J. Elford, Municipal Buildings.

LANCS.—December 15th.—For additions to Peel Hall, near Bolton, and converting the premises into a sanatorium, for the county council.—Mr. Henry Littler, county architect, 16 Ribblesdale-place, Preston.

BIRKENHEAD.—December 15th.—For the erection of a sanatorium, for the corporation.—Mr. C. Brownridge, borough engineer and surveyor.

LEEDS.—December 16th.—For the erection of a tramway shed and other buildings, for the corporation.—Mr. A. E. Kirk, architect, 63 Albion-street.

WEST RIDING.—December 18th.—For the erection of a school, for the Education Committee.—Education Architect, County Hall, Wakefield.

SPALDING.—December 19th.—For building six cottages, for the rural district council.—Messrs. Davis & Cowley, architects, 6 Double-street, Spalding, or 2 York-row, Wisbech.

SLEAFORD.—December 24th.—For providing and laying about 6 miles of water mains, construction of tower, reservoir, and other works, for the rural district council.—Mr. W. B. Marsden, engineer and surveyor.

EAST STOW.—December 30th.—For the erection of working-class dwellings, for the rural district council.—Mr. H. E. Wilkes, clerk, Council Offices.

BATTERSEA.—January 1st.—For the erection of a dust destructor, for the borough council.—Mr. W. Marcus Wilkins, town clerk.

CHEPPING WYCOMBE.—January 5th.—For the construction of a ferro-concrete bridge on the Hennebique system, and laying a short length of sewer and surface-water drain, for the corporation.—Mr. T. J. Rushbrooke, borough engineer and surveyor.

BOMBAY.—January 7th.—For the complete manufacture, erection and equipment of a refuse destructor for the incineration of 200 tons of refuse per day, for the municipality.—Mr. P. R. Cadell, municipal commissioner, Municipal Offices, Bombay, India.

FIFE.—For the construction of a sanatorium, for the county council.—Mr. A. C. Dewar, architect, Leven.

Iron and Steel.

BIRKENHEAD.—December 7th.—For the construction of pipe line consisting of 11¾ miles of cast-iron and steel pipes, tunnel and tanks, for the corporation.—Sir Alexander Binnie, Son & Deacon, St. Stephen's House, Victoria-embankment, London, S.W.

FIFE.—December 7th.—For providing cast-iron pipes and special castings, for the Kirkcaldy District

[illegible]—Messrs. J. & A. Leslie & Reid, 72a George-street, Edinburgh.

[illegible]—December 7th.—For the supply of cast-iron valves, sluice-valve boxes, and gratings, for the corporation.—Sir Alexander Binnie, Son & Deacon, St. Stephen's House, Victoria-embankment, London, S.W.

LEICESTER.—December 12th.—For the supply of cast-iron pipes and connections, for the Gas Committee.—Mr. H. Pooley, engineer and manager, Gas Offices, Millstone-lane, Leicester.

SHEERNESS.—December 14th.—For the provision and erection of steam, exhaust, air, water, and other pipes, together with the necessary valves, and other works, for the urban district council.—Mr. F. W. Stanton, 3 Victoria-street, Westminster, S.W.

MANCHESTER.—December 16th.—For the supply of water-tube boilers and alternators, for the Electricity Committee.—Mr. F. E. Hughes, secretary, Electricity Committee, Town Hall.

THAKENHAM.—December 19th.—For the supply of cast-iron spigot and socket pipes for the Storrington water supply, for the rural district council.—Major Tulloch & Haworth, engineers, 28 Victoria-street, Westminster, S.W.

SEVERN [illegible]—For providing, laying, and jointing about 4½ miles of cast-iron water mains, with valves, hydrants, air valves, and the construction of engine-house and reservoir, for the rural district council.—Messrs. Willcox & Raikes, Union-chambers, 63 Temple-row, Birmingham.

Roads.

ROMFORD.—December 7th.—For the supply of Guernsey granite, for the rural district council.—Mr. G. Lapwood, highway surveyor.

CAMBRIDGE.—December 7th.—For the supply of broken granite, syenite, basalt, or similar stone.—Borough Surveyor, Guildhall.

NEATH.—December 7th.—For making up certain streets, for the rural district council.—Mr. D. M. Davies, engineer, Council Offices.

WANDSWORTH.—December 7th.—For work of making up and paving, for the borough council.—Mr. P. Dodd, borough engineer, Town Hall.

EDMONTON.—December 8th.—For works of private street improvement, for the urban district council.—Mr. C. Brown, surveyor, Town Hall, Lower Edmonton.

CAERPHILLY.—December 8th.—For making up certain streets, for the urban district council.—Mr. A. O. Harpur, surveyor.

BUCKHURST HILL.—December 8.—For the supply of 140 tons of broken granite and hire of steam roller, for the urban district council.—Mr. T. J. Tee, clerk, Council Offices.

ROCHDALE.—December 9th.—For making up certain streets, for the corporation.—Borough Surveyor.

EASINGTON.—December 9th.—For making up and paving certain streets, for the rural district council.—Mr. G. Waterhouse, surveyor.

WESTBOURNE.—December 10th.—For the supply of hand-picked field stones, gravel and shingle gravel, for the rural district council.—Mr. H. Norris, surveyor, West Ashling, Chichester.

WARSOP.—December 12th.—For road improvement works, for the urban district council.—Messrs. Vallance & Westwick, White Hart Chambers, Mansfield.

HORSHAM.—December 12th.—For the supply in barrels of 40 gallons' capacity of about 25,000 gallons of tar, for the rural district council.—Mr. W. Dengate surveyor, 58 Park-street, Horsham.

WILTS.—December 14th.—For the supply of road metal for a period of one year, for the county council.—Mr. J. George Powell, county surveyor, County Surveyor's Office, Trowbridge.

WILTS.—December 14th.—For steam rolling the London and Bath trunk road, for the county council.—Mr. J. George Powell, county surveyor, County Surveyor's Office, Trowbridge.

WILTS.—December 14th.—For the supply of tools for work on 348 miles of main roads, for the county council.—Mr. J. George Powell, county surveyor, County Surveyor's Office, Trowbridge.

WILTS.—December 14th.—For spraying with Tarvia on lengths of main roads, for the county council.—Mr. J. George Powell, county surveyor, County Surveyor's Office, Trowbridge.

WARRINGTON.—December 14th.—For the supply of concrete flags, Rawtenstall flags, dressed kerbs, granite setts, and Lithofalt paving blocks, for the corporation.—Borough Surveyor.

FAVERSHAM.—December 14th.—For the supply of 1,000 tons of granite and granite chippings, for the corporation.—Town Clerk.

BIRMINGHAM.—December 15th.—For the supply of 1,500 tons of coal-gas tar, for the corporation.—Mr. Henry E. Stilgoe, city engineer and surveyor.

ALDERSHOT.—December 15th.—For the supply of Hungry Hill flints, basalt or limestone, and fifty 40-gallon iron drums or iron barrels suitable for holding tar, for the urban district council.—The Surveyor.

BIRMINGHAM.—December 15th.—For the maintenance and repair of asphalt pavements, for the corporation.—Mr. H. E. Stilgoe, city engineer and surveyor.

TUNBRIDGE WELLS.—December 16th.—For making up certain streets, for the corporation.—Mr. W. H. Maxwell, borough engineer and surveyor.

BERKS.—December 16th.—For the supply of broken road materials, gravel and sand, for the county council.—Mr. J. Fred Hawkins, county surveyor, Shire Hall, Reading.

WEYMOUTH.—December 16th.—For the supply of material for tar-spraying, for the corporation.—Mr. K. J. S. Harris, borough engineer and surveyor.

CROYDON.—December 17th.—For making up a road, for the rural district council.—Mr. R. M. Chart, surveyor.

HUDDERSFIELD.—January 4th.—For the supply of a motor-driven street sweeping machine, with collecting van attached, for the corporation.—Mr. K. F. Campbell, borough engineer and surveyor.

WOODSTOCK.—January 11th.—For the supply of best hand-picked unbroken stone, best broken stone (2-in. gauge), best double-screened nuts, and binding chippings, for the rural district council.—Mr. A. G. Higgs, clerk.

LOUGHBOROUGH.—For works of making up and repair, for the corporation.—Mr. A. H. Walker, borough surveyor.

DUBLIN.—For the supply of 1,000 tons of granite paving setts, for the Dublin United Tramways Company.—Mr. R. S. Tresilian, secretary, 9 Upper Sackville-street, Dublin.

Sanitary.

STANLEY.—December 7th.—For the construction of main pipe sewers, for the urban district council.—Mr. E. H. Middlebrook, clerk, 71 Queen-street, Morley.

CROYDON.—December 7th.—For the supply of about 4,000 sq. yds. of under-drainage tiles for percolating filters, for the corporation.—Borough Engineer.

ETON.—December 7th.—For the supply of disinfectants, for the rural district council.—Mr. H. Thompson, acting clerk, Stacey House, Slough.

CROYDON.—December 7th.—For the supply, erection and maintenance of nine revolving sewage distributors, for the corporation.—Borough Engineer.

KEIGHLEY.—December 8th.—For the construction of an 18-in. pipe sewer, for the town council.—Borough Engineer.

BIRMINGHAM.—December 9th.—For the construction of 937 yds. of stoneware pipe sewer, 1,180 yds. of stoneware pipe surface sewers, manholes, flushing manholes, stoneware drain connections, and ventilating shafts, for the corporation.—Mr. Henry E. Stilgoe, city engineer and surveyor, the Council House.

BINGHAM.—December 9th.—For the construction of sewerage and sewage disposal works, for the rural district council.—Mr. C. W. Kendrick, sanitary surveyor.

BENTLEY-WITH-ARKSEY.—December 11th.—For laying a 6-in. sewer, and relaying portion of an existing sewer, for the urban district council.—Mr. R. G. Whitley, surveyor.

ECCLES.—December 14th.—For providing and erecting a sewage recording apparatus, for the corporation.—Borough Surveyor.

WAKEFIELD.—December 15th.—For the construction of a main pipe sewer, for the rural district council.—Mr. F. Massie, engineer, Tetley House, Wakefield.

SOUTH SHIELDS.—December 15th.—For the supply of disinfectants, for the corporation.—Mr. D. Morley Mathieson, medical officer of health.

EPSOM.—December 15th.—For works at the sewage farm, including additions and alterations to destructor buildings, with air-compressing machinery and sewage screening apparatus, refuse destructor, two hydrolytic tanks, alterations to settling tanks, laying mains, and other works.—Mr. Edward R. Capon, surveyor, Bromley Hurst, Church-street, Epsom.

RHONDDA.—December 15th.—For the construction of a cast-iron sewer 1 mile in length and the supply of cast-iron pipes and specials, for the urban district council.—Mr. H. Barber, engineer and surveyor, Council Offices, Pentre, Rhondda.

RAMSBOTTOM.—December 17th.—For the construction of a percolating filter, sludge filters, sludge wells, sludge carriers, effluent carriers, and other appurtenant works, for the urban district council.—Messrs. J. Diggle & Son, 14 Victoria-street, Westminster, S.W., and Hind Hill-street, Heywood, Lancs.

TEDDINGTON.—December 21st.—For the construction of tanks, channels, filters, and other works required in the extension of the sewage works, for the urban district council.—Mr. William Fairley, Parliament Mansions, Westminster, and Mr. Marshall Hainsworth, surveyor, Council Offices.

HEBDEN BRIDGE.—December 24th.—For extensions to sewage disposal works, for the urban district council.—Messrs. John Newton, Son & Bayley, 19 Cooper-street, Manchester.

GREAT HARWOOD.—January 9th.—For alterations and extensions at sewage disposal works, for the Joint Sewerage Board.—The Engineers, Martholme, Great Harwood, Lancs.

Stores.

DURHAM.—December 12th.—For the supply of cast-iron direction posts, for the county council.—County Surveyor, Shire Hall, Durham.

GILLINGHAM.—December 22nd.—For the supply of road materials, Portland cement and lime requisites for precipitation works, stoneware pipes, timber, sewer ironwork, coal, coke, bricks, paints, oils, varnish, general stores, ironmongery, and disinfectants, for the corporation.—Mr. J. L. Redfern, borough engineer and surveyor.

Junior Institution of Engineers.—On the 14th inst., at the Institution of Electrical Engineers, the Marquis of Graham will deliver his inaugural address as president of the Junior Institution of Engineers, taking for his subject "The War and the Engineer." The proceedings will open at 8 p.m.

TENDERS FOR MUNICIPAL WORKS OR SUPPLIES.

The Editor invites the co-operation of SURVEYOR *readers with a view to making the information given under this head as complete and accurate as possible.*

* Accepted. † Recommended for acceptance ‡ Provisionally accepted

W. Iles, Southend *	10,840
B. B. & M. Barrell, Wivenhoe	9,903

Engineer's estimate, £10,900.

ROMSEY.—For steam rolling and scarifying, for the corporation.—Mr. A. J. Jenvey, borough surveyor:—

Price & Woodbridge, Limited, Bath.—Rolling, 3s. 7d. per hour, scarifying, 1½d. per yard super.
Eddison Steam Rolling Company, Limited, Dorchester.—9s. 6d. and 1s.d.
Wilts Steam Roller Depot, Trowbridge, Wilts.—3s. 4d. and 1d.

TAVISTOCK.—For the construction of sewerage and sewage disposal works, for the rural district council.—Mr. T. H. Harris:—

W. Shaddock, Plymouth	£931
Steer & Pearce, Plymouth	734
H. R. Petherick, Lydford *	713

MEETINGS.

Secretaries and others will oblige by sending early notice of dates of forthcoming meetings.

DECEMBER.

5.—Institution of Municipal and County Engineers: West Midland District Meeting at Birmingham.
5.—Lower Thames Valley District Surveyors' Association: Meeting at Twickenham. Mr. E. Willis, ASSOC.M.INST.C.E., on "The Supervision of Buildings under By-laws."
10.—Association of Managers of Sewage Disposal Works: Annual General Meeting in London.
10.—Society of Architects: Discussion on "A Model Form of General Conditions of Contract." 7.30 p.m.
11-12.—Institution of Water Engineers: Winter General Meeting in London.
11.—Junior Institution of Engineers: Marquis of Graham delivers his Presidential Address. Institution of Electrical Engineers. 8 p.m.

APPOINTMENTS OPEN.

OFFICIAL AND SIMILAR ADVERTISEMENTS RECEIVED UP TO 4.30 P.M. ON THURSDAYS WILL BE INSERTED IN THE FOLLOWING DAY'S ISSUE, *but those responsible for their despatch are recommended to arrange that they shall reach* THE SURVEYOR *office by noon on* WEDNESDAYS *to ensure their inclusion in the weekly list of summaries. Such advertisements may, in cases of emergency only, be telephoned (City No. 1046) subject to later confirmation by letter.*

ENGINEERING ASSISTANT.
Required [illegible] Temporary Engineering Assistant for Division of Ware. Salary £2 2s. per week. Applications, giving full particulars, to be sent to H. Tremelling, ASSOC.M.INST.C.E., Borough and Water Engineer, Newport, Mon. (2,135)

PORT-OF-SPAIN CITY COUNCIL.

The Council invite applications for the combined posts of City Engineer and Engineer of the Port-of-Spain Water and Sewerage Works.

2. The salary attached to the post of City Engineer is £100 a year, and to that of Engineer of Water and Sewerage Works, £550 a year, with travelling allowance at the rate of £75 a year.

3. The intention of the Council being that the [illegible] Engineer and Engineer of Water and Sewerage Works" should be held by the same person, every application must be for the [illegible]

4. The offices are pensionable under the Port-of-Spain Corporation Ordinance, 1914.

[illegible] appointment to the post of Engineer of Water and Sewerage Works, is subject to the approval of the Governor.

6. Candidates must be corporate members of the Institution of Civil Engineers of England, and must possess experience in the design, construction, and maintenance of waterworks and sewerage systems.

7. Applications, accompanied by not less than three recent testimonials, and stating age and previous experience, must be supported by satisfactory evidence that the candidates possess the qualifications set forth in the preceding paragraph of this notice, and must be forwarded so as to reach the undersigned not later than the 31st January, 1915.

8. Candidates must put forward with their applications a medical certificate of fitness for service in the West Indies.

9. The successful candidate will be required to furnish a bond with an approved surety in the sum of £500 for the due performance of the duties of the above offices. He will be required to devote his whole time to the service of the Corporation, and to reside in the City of Port-of-Spain, or within one mile of the limits thereof; and he must be prepared to enter upon the duties of the appointment within one month from the date of the receipt by him of the official notice of his appointment.

JOSEPH ARNOLD LAMY,
Town Clerk.

Town Hall,
Port-of-Spain,
Trinidad, B.W.I. (2,063)

BOROUGH OF BRIDLINGTON.

TEMPORARY ASSISTANT IN SURVEYOR'S DEPARTMENT.

Applications are invited for the appointment of a Temporary Assistant in the Borough Surveyor's Department. Applicants must be good Draughtsmen, with a thorough knowledge of Surveying, Levelling, Building and Drainage Inspection, and the [illegible] Surveyor's Department. Salary £2 per week.

Applications, marked "Assistant Surveyor," stating age, experience, and qualifications, together with copies of two recent testimonials, and stating the earliest date on which the applicant can take up his duties if appointed, must be received by me not later than Saturday, the 12th of December, 1914.

V. L. MATTHEWMAN,
Town Clerk.

Town Hall, Bridlington.
November 25, 1914. (2,130)

COUNTY BOROUGH OF STOKE-ON-TRENT.

BOROUGH SURVEYOR'S DEPARTMENT.

The Corporation invite applications for the appointment of a Junior Assistant in the Borough Surveyor's Office, at a salary of £75, rising, in the discretion of the Council, to £95 per annum.

Applicants must be neat and expeditious Draughtsmen, and accurate Surveyors and Levellers.

Preference will be given to candidates who have had experience in a Borough Surveyor's Office.

Applications, stating age and experience, accompanied by not more than three recent testimonials, and endorsed "Junior Assistant," must be sent to me not later than Thursday, 17th of December, 1914.

Canvassing, directly or indirectly, will be a disqualification.

[illegible]
Borough Surveyor.

Town Hall,
Stoke-on-Trent.
November 27, 1914. (2,127)

COUNTY BOROUGH OF GRIMSBY.

TEMPORARY TOWN PLANNING ASSISTANTS.

Applications are invited for the position of Temporary Assistant (three being required), with a practical knowledge of the procedure and work required in the preparation of Town Planning Schemes, including Surveying, Draughtsmanship and Estimating. Salary £130 per annum.

Preference may be given to applicants who have passed the Examination of the Institution of Municipal and County Engineers.

Applications, stating age and experience, accompanied by copies of three recent testimonials, to be addressed to the undersigned not later than noon on Monday, December 14th.

H. GILBERT WHYATT, M.Inst.C.E.,
Borough Engineer and Surveyor.

Municipal Buildings,
170 Victoria-street,
Grimsby.
November 30, 1914. (2,139)

TENDERS WANTED.

TEDDINGTON URBAN DISTRICT COUNCIL.

SEWAGE DISPOSAL WORKS.

The Council are prepared to receive Tenders for the Construction of Tanks, Channels, Filters, and other Works required in the Alteration of their Sewage Disposal Works, Broom-road, Teddington.

The Drawings and Specification may be inspected at the Office of Mr. William Fairley, Consulting Engineer, Parliament Mansions, Westminster, also at the Office of Mr. Marshall Hainsworth, Surveyor, Public Offices, Teddington.

Copies of the Bill of Quantities may be obtained on deposit of crossed cheque for £5, made payable to the Council, which deposit will be returned on receipt of a bonâ-fide Tender.

Sealed Tenders are to be delivered to the undersigned by noon on the 21st day of December, 1914.

The Council do not bind themselves to accept the lowest or any Tenders.

(By order)

G. H. SALMONS,
Clerk to the Council.

Public Offices, Teddington.
November 30, 1914. (2,138)

UPTON-ON-SEVERN RURAL DISTRICT COUNCIL.

UPTON-ON-SEVERN WATER SUPPLY.

CONTRACT No. 2.

The Upton-on-Severn Rural District Council are prepared to receive Tenders for the Provision, Laying, and Jointing of about four and a-half miles of 5-in., 4-in., and 3-in. Cast-iron Water Mains, together with Valves, Hydrants, Air Valves, and necessary Chambers in connection therewith; also the Construction of Engine-house, Head Well, Reservoir, and other incidental Works in accordance with the Plans, General Conditions, and Specification prepared by the Engineers.

Plans and Specification may be seen at the Office of the Engineers, Messrs. Willcox & Raikes, Union Chambers, 63 Temple-row, Birmingham, from whom copies of the Bills of Quantities and Form of Tender may be obtained on and after the 14th day of December on payment of a deposit of Five Guineas, which will be refunded on receipt of a bonâ-fide Tender and the return of all documents to the Engineers.

Sealed Tenders, in envelopes supplied, and endorsed "Upton-on-Severn Water Supply Contract No. 2," to be delivered at my Office not later than 12 o'clock noon on the 31st day of December, 1914.

The Council do not bind themselves to accept the lowest or any Tender.

G. H. T. FOSTER,
Solicitor and Notary,
Clerk to the Council.

Town Hall,
Upton-on-Severn.
November 25, 1914. (2,131)

The Surveyor

And Municipal and County Engineer.

Vol. XLVI. DECEMBER 11, 1914. No. 1,195.

Minutes of Proceedings.

Municipal Water Supply.

The proper use of water users who ever give a single thought to the magnitude of the engineering difficulties that have to be overcome, the miles of culverts and pipes that have to be laid, the vast areas that have to be searched for suitable sources of supply, in order that the domestic tap may not fail them, must be exceedingly small. And yet if such matters can be made interesting to the popular mind, it is very desirable that some knowledge of the conditions under which this and other municipal services are secured should be brought home to the general body of the ratepayers. One way in which this can be done is by the delivery of lectures to local audiences by responsible officials as opportunity may occur. Such a lecture on "The Provision of a Municipal Water Service" was recently given at Bolton by Mr. Lewis Mitchell, M.INST.C.E., the corporation waterworks engineer, by whose courtesy we are enabled to reproduce it in our columns. Part of the instalment which appears in our present issue is of historical interest, but the main body of the lecture deals in order with all those matters which arise for consideration in the execution of a scheme from its inception to the delivery of water to the householder. In the first place it is noteworthy that the day of the private company is declining, the principle being more and more generally acknowledged that a matter of such importance to a community as the purveying of water should not be left in private hands, but should be undertaken by the responsible municipal authority of a town or district. Evidence of this is found in the fact that at the present day the value of municipal water undertakings in this country alone approaches the colossal sum of £200,000,000.

In embarking upon a water scheme, the first question to be considered by a local authority is naturally the quantity of water that will be required—usually expressed in gallons per head of the population per day. This is a matter of some nicety, depending principally on the character and habits of the population and the industries of the district; nevertheless it is of primary importance, as it governs every future detail of the works. In this connection Mr. Mitchell points out that regard should be had to the future, and that as sanitary principles become better understood and the luxury of a good supply is increasingly appreciated, the demand will become correspondingly greater. The next important consideration is the quality or character of the water. It must be of good appearance, of the required degree of hardness, and free from contamination. And here it must be remembered that—to paraphrase an old proverb—all is not pure that sparkles, as the purity required is not only physical and chemical, but bacteriological. Dealing next with the sources of supply, Mr. Mitchell gave separate consideration to underground supplies and impounding reservoirs. Both sources are, of course, entirely dependent upon the available rainfall. The actual rainfall in different districts in the British Isles may vary between the 20 in. of the Eastern counties and the 130 in. of the hills of Cumberland, while there is also great variation in the proportion of the actual rainfall which is available for use. If the geological conditions are favourable for obtaining an underground supply the task of the engineer may be a comparatively simple one. The initial cost will be comparatively small, treatment of the water will generally be unnecessary, no compensation water will have to be provided, and if the infiltration of surface water from thickly populated districts can be prevented the risk of pollution will be remote. The absence of liability to provide compensation water is due to the fact that no legal right to water which flows underground in an undefined channel can be acquired by prescription. The leading case on the subject was decided as long ago as 1859, but its authority was recognised by the House of Lords as recently as 1895, when it was held in the case of the *Bradford Corporation* v. *Pickles* that the defendant was entitled to divert or impound the water percolating beneath the surface of his lands, so as to prevent it reaching or assisting to feed the springs belonging to the corporation.

* * *

Street Accidents and Local Authorities.

The recent case of *Papworth* v. *Battersea Borough Council* a report of which appeared in our issue of the 6th ult., p. 350—is an important one for highway authorities, and the result of the new trial which has been ordered by the Court of Appeal will be awaited with interest. The plaintiff was a lady cyclist, who had been injured through colliding with a surface gully. The council were both highway authority and sewer authority, and Mr. Justice Horridge held that, though no liability attached to them in the former capacity, they were liable in the latter. The Court of Appeal, without either affirming or reversing the decision on the question of law, came to the conclusion that several material questions of fact had been left in doubt at the trial of the action, and directed that there should be a new trial. The case being thus still *sub judice*, we defer further comment upon it until the ultimate result is made known. It may be of interest, however, to refer to one or two reported cases in which highway authorities, also acting in some other capacity, have been held liable for some negligent omission occasioning injury to persons

authority, employed a contractor to construct a surveyor. Some months later a subsidence took horse fell and was injured. It was held that there was evidence that the work had been negligently the highway authority.

In that case the plaintiff fell and was injured ing, but the box belonged to the board. It was held that, although the board might not as sur- keeping the flap in a proper state, they were liable as the authority for watering the streets, in which capacity they had placed the flap there. In a water-main valve cover projecting an inch above the road (*Kent* v. *Worthing Local Board*, 10 Q.B.D., 118). The board were both highway and water authority. The cover had been properly con- was held that it was the duty of the board to using the highway, and that they were liable for the accident. Of course, in order to succeed in the defendants are responsible.

Practical Points in Housing.

arise for consideration in regard to the housing of the working classes may broadly be divided into those which concern policy and those which are connected meeting of the Institution of Municipal Engineers lay in the very useful suggestions he was able to the repair or reconstruction of old houses which have become unfit for human habitation and as part of his paper was, in our view, open to certain criticisms, which, however, were not forthcoming attributed the present deficiency in housing accommodation primarily to the absence of any dwellings which may become unfit for human habitation without having recourse to judicial proceedings. In so far as this was an effective cause of the deficiency, it was removed by the Housing, Town Planning, &c., Act, 1909, by which a local authority are themselves empowered to make closing orders, subject to an appeal to the Local Government Board. The difficulty has really arisen from the growing impossibility of erecting cottages at a cost so low that they can be let at an economic rent. It will be seen at once that the greater the facilities for making closing and demolition orders, the greater will be the deficiency of accommodation, unless the principle of state or rate aid is admitted—unless, indeed, the an increased rental. These, however, are questions of politics with which we have no concern.

Turning now to Mr. Whitwell's suggested minimum requirements where houses are being reconstructed, we find ourselves in general agreement with what he had to say. It must be remembered, however, that the powers of a local authority under the Act of 1909 are limited to requiring the execution of works which are "necessary to make the house in all respects reasonably fit for human habitation," and that a landlord has a right of appeal to the Local Government Board if he is aggrieved by the terms of the notice. We agree that it is important to avoid patching up dwellings that are inherently Such houses should undoubtedly be closed and demolished. But in specifying works to be executed local authorities should be careful not to exceed the powers fairly given to them by the statute. Proceeding to deal with the question of the provision of new cottages, Mr. Whitwell boldly expressed the opinion that "good, serviceable and attractive workmen's houses can be erected under the present Housing Acts, embodying the best features of modern garden city dwellings, having environments both pleasing and practicable in character, and capable of being let at a rental quite within reach of those people for whom they are intended." The discussion showed a disposition to disagree with this opinion —a disagreement which we entirely share, regarding it as too broad a generalisation based without justification on the experience of Mr. Whitwell in his own district.

Sewage Treatment by Aëration.

In an issue of July 24th last we referred at these columns with the results which had been obtained in experiments carried out at Manchester by Messrs. Ardern & Lockett in the purification of sewage by aëration without any other treatment. The principal and most interesting feature of this process was the good effect produced by the continual mixing with the sewage under treatment of the sludge which had accumulated as the result of the sedimentation of the sewage. The peculiar qualities of this sludge led to its description by the authors of the experiments as "activated" sludge. We then expressed the opinion that further experiments on a scale considerably greater than laboratory experiments were needed in order to demonstrate that the same results could be secured when dealing with large volumes, and to prove that the cost of the process would not be prohibitive. It is therefore with considerable satisfaction that we note from the paper, printed on another page, which was read by Mr. W. H. Duckworth, F.C.S., manager of the sewage works at Salford, before a recent Manchester District meeting of the Association of Managers of Sewage Disposal Works, that highly satisfactory results were obtained in similar experiments on a practical scale carried out at the Salford sewage works. These results indicate that the principle has been proved, and as the experiments with which the work was undertaken, the author and his co-worker are to be congratulated on their success.

There still remains the question of cost, in some respects the most important side of the question from the engineering point of view. In this connection the remarks of the author towards the end of the paper are wise and deserve careful

consideration. It is much better to avoid publishing figures based upon results obtained with apparatus which was not designed specially for the purpose in view, and the efforts of engineers, chemists and sewage works managers should now be devoted to ascertaining which form of tank and method of air distribution is the most efficient for the process in question, and what is the minimum volume and pressure of air required to produce the maximum degree of purification. A further paper on this subject was read by Mr Ardern at the annual general meeting of the same association held in London yesterday afternoon, and will be reproduced in our issue of next week, together with an account of the discussion which followed its presentation.

Country Roads in Victoria.

In another column will be found a summary of the first annual report of the Country Roads Board of Victoria, Australia—a document of exceptional interest. The amount of constructional work carried out by the board since its appointment in March of last year is naturally comparatively small but much preliminary work has been done in connection with a systematic investigation of the highways in some of the more remote districts. The commercial and economic value to any community of a system of good roads is now generally recognised, and the disabilities under which a population is placed in their absence were strikingly represented to the investigators both by the interest which their proceedings aroused during the day and the deputations which they received at night to urge the necessity for some action. The report states that the condition of the roads in the areas inspected is anything but satisfactory, while in the older settled districts there are distinct signs of deterioration in recent years. In regard to the carrying out of permanent improvements, the board has decided upon a policy of delay until some assurance is forthcoming that the locations and grades of existing roads cannot be improved at a reasonable cost. The effects of modern traffic, too, are just beginning to be felt in Australia, a fact which raises important questions as to the choice of materials. This matter is still under consideration, although, having regard to the immense mileage of roads awaiting construction in the country, the choice of materials must be limited for many years to come to broken stone or gravel. It is interesting to observe that the Melbourne University authorities are co-operating with the board in regard to the testing of materials, and the assistance so rendered ought to be of great value.

"The Surveyor" Special Issue.

In the Special Annual Issue of THE SURVEYOR, to be published on January 29th next, the customary comprehensive list of the works projected by the various local authorities for 1915 will, as usual, be preceded by a series of articles contributed by specialists reviewing the progress which has taken place during the past year in connection with sewerage and sewage disposal, road work, water supply, refuse disposal, street lighting, electricity supply, bridge construction and the provision of public buildings. The legal precedents and legislation of 1914 in relation to municipal engineering will be reviewed by the Law Editor, Mr. J. B. Reignier Conder, while another valuable feature of the issue will be a survey of the year's literature of municipal engineering. In addition there will be the customary Law Notes, Reports of Municipal Work in Progress, Local Government Board Inquiries, Personal News, and the fullest information relating to Vacant Appointments, Municipal Contracts and Competitions.

As stated in our last issue, those of our readers who propose to comply with our request for particulars of works projected in their districts will greatly oblige us and facilitate the production of the Special Number by forwarding their returns without delay. The form which these should take is now generally understood, but the exact nature of the information sought can be seen by reference to our issue of January 30th last, over thirty-six pages of which were devoted to the publication of these official forecasts. We would repeat also that any other material which readers may consider sufficiently interesting for inclusion in the issue will be welcomed, and that this matter also, particularly if its use involves the reproduction of drawings or photographs, should likewise reach us at the earliest possible moment.

* * *

The Llanybyther Appointment.

The Llanybyther Rural District Council, who resolved to advertise for a surveyor at £45 a year under conditions described recently in THE SURVEYOR, have completed their task by making an appointment, but it can hardly be claimed that the last stage of the proceedings was happier or less open to question than the first. The subject led to what the reporter of the *Cambrian News* designates "a lively discussion." In the course of the voting the chairman, Mr. Rees E. Evans, observed that one of the candidates had been rejected, though he had the support of the majority, and he added, "the system is rotten, and as chairman I am not going to proceed further with it. We must vote over again." After an interval of oratorical fencing the chairman was at length prevailed upon to proceed under what he repeatedly denounced as a rotten system, and upon a vote being taken it appeared that the two candidates for the appointment received ten votes each. The chairman then gave his casting vote for one of them, remarking that "the other candidate had not asked for his support." Dispassionate observers would be excused if they concluded that this might be a very good reason why he should have supported the unsuccessful candidate, but this consideration is negligible in face of the overshadowing doubt whether the worthy councillors have legally appointed anybody at all. It is true that this would not really matter a great deal in view of the value of the position, but even the business in connection with a salary of £45 a year ought to be transacted "decently and in order."

* * *

Institution of Water Engineers.

Although this year the proceedings of the winter general meeting of this body—which opens this afternoon at the apartments of the Geological Society, Burlington House—are to be spread over two days, only two papers are, as it happens, to come before the members for discussion. In one of the two contributions an account of the scraping of a 15-in. trunk main at Batley will be supplied by Mr. J. C. Barrowclough, the waterworks engineer of that town, and in the other the Whitton pumping station of the Ipswich Corporation waterworks will be described by Mr. C. W. S. Oldham. It cannot be denied that this is an unusually meagre programme when contrasted with those of previous winter meetings, for there would seem to be little other business to transact; but the responsibilities of water engineers, like those of other officials in charge of public services, have been in no way lessened by the war, so that, while the apparent dearth of papers is to be regretted, there is some cause for congratulation that the fixture has not suffered the fate that has overtaken so many similar gatherings during the past few months.

D

Highways and Byways.

By W. GREGORY, A.M.I.C.E., M.INST.M. & C.E., District Surveyor, Herts.

Good roads are an asset of inestimable value, and their construction and upkeep should be a national charge, both on account of uniformity in construction and administration.

The definition "good" is ambiguous, a good road in one district, or under certain conditions, being a very inferior one in another, or under other conditions; consequently uniformity of construction and maintenance would hardly be expected to be found.

A road should be constructed to carry the heaviest traffic likely to come upon it under all conditions, with as little wear to the road itself, and the greatest amount of comfort for those travelling over it as possible; and for this it is not absolutely necessary to make all roads to the same pattern; varying conditions of climate and of life—mining, agricultural, or manufacturing—all for somewhat different methods of treatment.

In olden times roads in winter were partly impassable, and only the old Roman, or later turnpikes, were used with any degree of comfort.

After the invention of the steam engine and the construction of railways, roads appear to have become neglected, and from 1830 to 1880, a period of fifty years, very little was done in improving them. Cressy, writing in 1847, says: "Railroads have now superseded in a great measure the use of the old turnpike roads, and probably ere long there will not be traffic enough to contribute the toll for their maintenance; we may then anticipate that they will fall into the condition of parish roads, and become again impassable if the Legislature does not provide for the contrary. The next generation will almost require a guide-post at every turning to indicate the route."

There is no doubt that the introduction of the bicycle had a large share in the general desire for improved road surfaces and the calling into existence of steam rollers for consolidating roads.

The writer distinctly remembers being thrown from a bicycle on a trunk road between Cheltenham and Worcester in the month of August, 1880, by reason of the deep ruts on the road, an almost impossible occurrence at the present time.

The invention of the internal combustion engine and its application to motor cars quickly forced the matter of road construction into the front rank of important questions.

Roads inside the boundaries of urban, borough, or city authorities require separate dealing with to those which are distinctly rural.

Considering a road as having a fairly smooth surface, whether steam rolled or not, the wear on the surface is caused by the following:—

(1) The pounding action of the horses' hoofs.

(2) The grinding of tyres of wheels.

(3) The sucking action of the rubber motor tyre on recovering its shape (from the flattening out by the weight of the car) in its revolution.

(4) The effect of the strong current of air produced by the body of the car, which partly carries away the disintegrations.

(5) The nipping, sucking, and grinding action of steel-studded motor tyres.

(6) The grinding action of diagonal ribbed tyres of traction engines.

(7) The disintegration of portions of metal by reason of changes of temperature, and expansion of water in freezing.

Other causes which tend to accelerate any of the above are the corrugations or wavy effect produced through rolling in too thick a coat of metal in proportion to the gauge, the alterations of subsoil due to mining operations in some districts, and the neglect of farmers to clean the wheels of carts in agricultural districts in bad weather.

In the case of the last-mentioned the writer had to repair a 300-yd. length of a main road, so damaged that the steam-rolled granite surface and foundation of flint gravel were both licked up and carried away by the large lumps of clay brought on the road with the cartwheels during a fortnight of alternating frost and thaw, and the damage done amounted to £100, far in excess of motor car traffic.

Arguments have taken place as to the benefit or otherwise of trees growing alongside highways. On untarred roads they may, from their shade and shelter, prevent sudden changes in the condition of the surface, but there is no doubt that close proximity is detrimental, especially to roads having thin crusts, the growth of the roots loosening the subsoil and causing the crust to assume a wavy formation.

Whether a road was good or bad depended up to recent years to a large extent on the prevalence or otherwise of material locally obtainable, irrespective of the fact that the material might be totally unsuitable for the traffic.

There are many hundreds of miles of roads in the kingdom which were formerly only country lanes or cart tracks. These are now taking motor traffic, and in many places are not wide enough for two vehicles to pass. As any public road may be called upon to carry this traffic in the future, these should all be widened sufficiently to allow two cars to pass at a fairly fast pace, besides allowing a margin for the safety of the pedestrian.

To make all the roads of the country of a given class of an uniform thickness is not necessary, as the strength depends not only on the thickness and quality of material, but also on the nature and condition of the subsoil, and the support that is given by the haunches or abutments of the crust; a road passing over a chalky subsoil will carry a much heavier load for the same thickness than one over clay or loam.

One such road constructed by the writer, having only 2 in. of flint gravel, topped by 2 in. of granite, rolled tight, carried for ten years most of the traffic from about 20 square miles before the surface wore sufficiently to call for repair, the subsoil being kept dry by the close surface, and sufficient side drains, 8 ft. from the metal bed, carrying off the drainage. The same road, if constructed entirely of local flint gravel (the cheapest in first cost), would have required re-metalling every second year, the cost, comparing the two, being 30s. for gravel as against 13s. for granite, and less labour being required on the granite surface.

Many road surfaces have too much camber, making it unsafe and uncomfortable for fast traffic, which, in such cases, invariably keeps to the centre.

Weak roads may be strengthened by dwarf side walls of rubble stone sunk at the sides, which may also act as drains for the subsoil.

Sudden dips between the metal surface and the margin of a road are sources of weakness, and where possible should be filled up and rolled solid to an even slope with the rest of the road section, and provision made by outlets to side ditches or drains at some distance from the metal bed. This, in many cases, is impossible without going to large outlay in purchase of land; but a substitute may be found in deep subsoil drain constructed to take surface water as well.

There is not the slightest doubt that tarring a road surface minimises the wear; at the same time it must be remembered that the tarring of the sur-

tarred or faced with asphaltic crust prevents evaporation.

Very few roads are properly drained—some not at all. During rainfall a larger percentage of water runs off the surface of a road than off the land; but if untarred, a considerable amount soaks through it, and is given off again partly by evaporation. In many cases a portion of the rainfall on adjacent land finds its way sideways below the road crust, and escapes by evaporation through the crust; but if the road is tarred this is prevented, and if no provision by drainage is made, a source of weakness to the crust is produced.

Now, the last section in the mind of the average motorist is that one showing the whole of the public roads of the country surfaced with an asphaltic crust. This is a desirable objective, but under present conditions it is prohibitive except on short lengths of important trunk roads, for, taking the average width of roads at 16 ft., the cost would never be less than £2,000 per mile for a thickness of 3 in., and more according to the distance from railway. This is assuming that there is a fair crust to work on; but most secondary roads require making up and draining before this takes place, and as very few have foundations, the present surfaces would, in many cases, require to be used as such, and future roads built on them.

Substitutes—as tar-grouting or tarred slag macadam—will no doubt bring the dream nearer to a realisation.

The writer, in 1903, laid down a length of slag which was dry rolled on a scarified surface, and cold coal tar poured on and brushed into it, and rolled with the addition of granite chippings and sand until a firm surface was obtained. This has lasted, carrying considerable motor traffic, until the present time with but little repair in the shape of slight painting in places with hot tar and chippings, and is practically as good as when laid.

Much may be done on roads to improve the gradients—cutting down snaps of hills and filling hollows, and increasing the efficiency without detracting from the picturesqueness of the surroundings.

All cross roads where view is restricted owing to high banks, coppices, &c., should have the corners rounded off and set back, so that a minimum width diagonally of four times the width of the road is left for traffic—*i.e.*, supposing the roads to be 15 ft. in width, an open space at the cross-roads should be 60 ft. from curve to curve diagonally.

The question of labour will come to the front in all future highway administration, and higher wages and provision for housing will have to be considered in order to get skilled, intelligent men, without which economy in construction and upkeep will be impossible.

Metropolitan Water Board New Offices. At a special meeting of the Metropolitan Water Board recently the tender of Messrs. T. W. Heath & Son, amounting to £110,004, was accepted for the erection of the board's new central offices in Rosebery-avenue.

Water Main Cleaning.—The "Eric" (Patent) Pipe Scraper Company, Limited, Chepstow, Mon., have issued an illustrated booklet describing their well-known system of cleaning water mains. Engineers in search of an effective means of dealing with the [illegible] will do well to apply for a copy of the pamphlet which will be sent free on application to the firm.

Architects' War Committee: Exhibition of Drawings. An exhibition of drawings, forming part of the London Section of Prof. Geddes' Collection will be opened at the R.I.B.A. Galleries on Tuesday, December 15th, at 4 p.m. These drawings have been prepared and collected in order to replace a portion of Prof. Geddes' collection lost by the sinking of the "Clan Grant." Mr. H. V. Lanchester, vice-president R.I.B.A., will give a brief paper on "Civic Survey Work," illustrated by these drawings, on Thursday, December 17th, at 8 o'clock. The exhibition will remain open till December 19th.

THE RUISLIP-NORTHWOOD TOWN PLANNING SCHEME.

Papers dealing with certain features of the town planning scheme of the Ruislip-Northwood Urban District Council were presented at a meeting of the Town Planning Institute held at Westminster on Friday evening last, the authors being Mr. F. M. Elgood, chairman, and Mr. Edmund R. Abbott, clerk, respectively, of the local authority. Mr. Raymond Unwin occupied the chair, and among those present were Messrs. W. R. Davidge, district surveyor, Lewisham, C. J. Jenkin, engineer and surveyor, Finchley, W. T. Lancashire, city engineer, Leeds, J. Walker Smith, chief engineer to the Local Government Board for Scotland, and E. Willis, engineer and surveyor, Chiswick.

Mr. W. L. Carr, who opened the discussion, remarked that it had been one of the greatest pleasures in his life to assist in the carrying out of the scheme. At the outset he confessed they got very disheartened, but the advice which they had received from time to time from the late Alderman Thompson seemed to take them right out of the mire, and everything became plain sailing. It was a wonderful fillip to them to be able to turn to one whose experience of town planning in its early stages was so valuable, and it was astonishing what could be done with a town planning scheme if one only stuck to it. He was quite confident, so far as his own authority was concerned, that they had secured enormous advantages of many kinds which even at the present time they were feeling the benefit of, and his belief was that every penny of expense incurred in the preparation of their scheme would be repaid a hundredfold to the community. It was to be hoped that surveyors in other districts might be induced by the example of Ruislip-Northwood to try to promote schemes where they felt the localities would benefit from such a course, and not take up the attitude that some had done, and say that it only meant more work and very little compensation for their trouble.

Mr. J. Walker Smith, who also spoke, asked by what process of reasoning the Ruislip-Northwood Council had adopted the mathematical square of a 5-acre land unit because it seemed to him that complications were likely to arise when this embraced parts of other properties, streams, and so forth. They were doing a little town planning in Scotland, and there was one scheme of interest to him in connection with the city of Glasgow. That scheme embraced a number of districts, and would extend to some 20,000 acres, more or less. The main feature of it was the continuation from the centre of the city of an existing main road, a wide thoroughfare of rather fine appearance, which it was proposed ultimately to extend a distance of 20 miles to Loch Lomond.

Municipal Work at Stockport. A total length of 1,085 yds. of new streets and 9 ft. passages was opened out in Stockport during the period covered by the last-issued annual report of Mr. John Atkinson, Assoc.M. Inst.C.E., the borough surveyor. Highway expenditure during the year amounted to £36,292. The carriageways are principally composed of Lancashire and Derbyshire grit setts, with Welsh and Dalbeattie granite setts on the important thoroughfares and main roads. On the main roads, however, the grit paving is gradually being done away with, and granite paving and granited rock asphalt laid down instead. The macadamised roads in the borough are not of great extent. In connection with lighting, Mr. Atkinson's report states that 3,185 gas lamps are now in use, these being erected at an average distance apart of about 55 yds. The practice within recent years, however, has been to place the lamps an average distance of only 40 yds. from one another. All the lamps have incandescent burners. The Gas Committee charge per annum for lighting, gas and maintaining (1) "ordinary" lamps, £2 10s. for one jet, and £5 14s. for two jet; (2) "globe" lamps, £3 7s. for one jet, £5 5s. for two jet; and £7 for three jet. There are sixty-five electric arc lamps. The average cost of fixing arc lamps on tramway poles is £18. The annual lighting, cleaning and maintenance charge per arc lamp is £11 5s. There are sixteen "Osram" lamps, the average cost of fixing being £3 per lamp, and the annual charge for lighting £2 per lamp.

Housing of the Working Classes: A Few Suggestions.*

By EDWARD WHITWELL, [illegible].

[illegible] the question of housing [illegible] paper [illegible] the [illegible] [illegible] [illegible]

[illegible] with the prospect of large [illegible] to [illegible] by the [illegible] for [illegible] [illegible] [illegible]

varied in that connection, thus providing that every dwelling should have a separate convenience. He was in agreement with the author on the subject of air space, but he did not agree that rooms should have a minimum height of 8 ft., his own scheme allowed a height of 7 ft. for living-rooms and 6 ft. 6 in. for bedrooms. So long as the windows went to the ceiling the same result was secured, as the space above the windows simply meant the accumulation of so much vitiated atmosphere. They had to fight very hard for the clause, but they were successful in the end, and it did undoubtedly get over the question of [illegible] admitting of a saving in cost of construction. It was necessary, he thought, that every house should have a store for food. They had made that provision, and would be able to enforce it in the future. He would like to ask the question whether a local authority, after building houses, could sell the buildings to tenants who might desire to acquire them. His own view was that there was no objection to houses being built in blocks of eight provided they were built round quadrangles, as in the Ruislip-Northwood scheme. He was opposed to the erection of walls at the rear of houses, because walls, however low they might be, prevented the free circulation of air. In regard to the matter of curtilage, he would like to know whether Mr. Whitwell had provided for not more than a quarter of the land being built upon. He did not agree with the author on the question of intercepting traps: he thought himself these should not be abolished in hilly districts, though he did on the flat. He agreed with Mr. Whitwell regarding back additions. In conclusion he desired to ask why, in the balance sheet accompanying the paper, there was no price given in respect of sewers.

Mr. A. PALMER (London) said he considered it would be [illegible] to lay up a code of regulations applicable to every district, the restrictions in various parts of the country differing so greatly. In Cornwall, for example, it was a common thing to use local stone for walls, which were frequently as much as 3 ft. in thickness; but the regulations in vogue there obviously could not apply to a county like Surrey, where the thickness of brick walls was 9 in. He doubted whether the figure of one-sixth of the floor area as the window space could be generally applied. In the North the result would be very cold rooms, proving that it was difficult to have the same code in all parts of the country.

Mr. G. B. CHELVERS (Dundee) agreed that a good, well-ventilated pantry should be provided in all working-class dwellings. Unfortunately, they could not give people all they asked for. In his own district there were not many people who could pay as much as 4s. 9d. and 5s. 6d. a week in rent.

Mr. A. R. BLEAZARD (Chatteris) said they had tried in his district to put twenty houses to the acre, but afterwards found that they could not let them for less than 7s. 9d. and 6s. 9d. per week. He then got tenders for forty to the acre, which were let at 5s. 9d. and 5s. 6d.; therefore they could not do what Mr. Whitwell was doing. Much depended, of course, on what was called a house; in his better houses he provided a parlour, three bedrooms, kitchen-scullery, and bath-room. Twelve houses to the acre was a good thing if it could be done, but he would like to find a place in the North where comfortable houses had been erected on that system and let at such low rents.

Mr. H. C. ADAMS (London) asked Mr. Whitwell whether, if he lived in the old part of a town with old sewers, he would have an intercepting trap on the drains of his own house.

Mr. T. MUNDY (Woolwich) inquired whether, in miners' cottages, baths, if provided, were not often used for the storage of coal, and seldom for their legitimate purpose.

Mr. W. WALLIN (Newcastle-on-Tyne) suggested that the paper verged somewhat on the millennium. He agreed that locality had a great deal to do with the class of houses which were put up. If Mr. Whitwell had actually been able to do what he had said, South Wales was in some respects ahead of Northumberland, for he had found that where baths were provided in pitmen's houses in the latter county, the men, in 75 per cent of cases, continued to bathe in front of the fire, and the baths were used for every other purpose except the one for which they were intended. Temperament entered largely into the question. He agreed that slums should be done away with, but one could build the nicest houses possible, but occupied by a certain class of people they would be like pigstyes in three months. It was impossible for a workman earning only 15s. a week to pay 5s. 6d. a week in rent; therefore they had to find some cheap way out, and if Mr. Whitwell would furnish a plan of what he had done it would be very helpful.

Mr. HORACE BOOT (Westminster and Tunbridge Wells) asked Mr. Whitwell whether he had actually built the houses he had described. If he had he would like to hear what his experience had been, because he could not see how such houses could be built at the price. He admitted there was a crying need for such dwellings, but it would be interesting to know whether the houses could be made to pay. He knew of no cottages in the South which had been built at anything like the figure he had given. There were three reasons why the cost of house building had increased in recent years. The first was that the men were paid more than formerly; secondly, they did less work; and, thirdly, materials cost more; so that, although years ago it might have been possible to have done what was suggested in the paper, he ventured to think he would find it was impossible now.

Mr. WHITWELL, in replying, observed, in regard to Mr. Carr's remarks, that 7 ft. was a very low height for a room, and he would not like to cut it down to that figure in order to save a few shillings. He did not think anyone would agree that houses should be built without stores for food. Houses built under the Housing of the Working Classes Act could not be sold to tenants. He disagreed with what had been said regarding dividing walls, and would not dream of omitting to provide such means of securing necessary privacy. His houses averaged in number 13·8 to the acre, and they were so arranged that practically in every case the living-rooms looked out upon open spaces. The cost of the sewers was included in the street works contract, owing to a Local Government Board requirement, and a 50 per cent reduction that was allowed for compounding rates on houses of £10 and under per annum also helped to reduce the cost to the tenant. He had not suggested that one code could be made applicable to the whole of the country; what he had in view was a code of minimum requirements which could be increased as circumstances demanded. One must not go below a reasonable health limit. A less window space than one-sixth of the floor area was too small. In regard to cost, he agreed that it all depended on wages and so forth, and he realised that it would not be possible to build such houses in the South of England and let them at the same rent. In reply to Mr. Adams, he would have no objection to living in a house without an intercepting trap, provided every house had its own ventilator direct into the sewer. In his district they had not had the same experience of the misuse of baths in miners' houses, because they had managed to persuade the Local Government Board to allow baths to be fitted within 4 ft. of the fireplaces. The houses he had described had been erected about two years, and they found they were quite within their estimates. At the same time, it was a question of district, and the same thing might not be possible elsewhere.

Change of Address.—Increasing business has, we are informed, made it necessary for Durable Roads, Limited, to move to more convenient offices. Their address is now 35 Hamilton House, Bishopsgate, E.C., and their telephone number London Wall 3416.

Business Announcement.—Messrs. J. Wolstenholme & Son, mechanical and electrical engineers, Albert Iron and Brass Works, Radcliffe, Lancs, announce that they have appointed Messrs. W. E. Horsman & Son, of 127 Pendle-road, Streatham, London, S.W., their sole agents for the counties of Kent, Surrey, Sussex, Hampshire, Buckingham, Middlesex and Essex.

Salford Electricity Undertaking.—The new turbine-driven electric generator which was lately installed at the Frederick-road electricity works (Pendleton) of the Salford Corporation was formally started last week by the Mayor of the borough. The new installation is part of the policy of improvement which the Salford Electricity Committee has undertaken since the appointment of the new engineer, Mr. J. A. Robertson. This set has cost about £15,000, and was delivered and completed in nineteen weeks by the British Westinghouse Company.

Aëration Experiments with Activated Sludge.

A RÉSUMÉ OF WORK DONE AT SALFORD.*

By W. H. DUCKWORTH, B.Sc., Manager, Sewage Works, Salford.

On April 3rd of this year a paper on "Experiments in the Oxidation of Sewage without the Aid of Filters" was read before the Manchester District of the Society of Chemical Industry by Messrs. Ardern & Lockett, of the Manchester sewage works laboratory at Davyhulme. This paper dealt with a series of experiments which had been carried out at Davyhulme, demonstrating the possibility of treating crude sewage by means of atmospheric air, and producing purification to the extent of over 90 per cent, thereby producing effluents which were considerably above the requirements of the Mersey and Irwell Joint Committee, as well as the suggested dissolved oxygen standard of the Royal Commission on Sewage Disposal.

The general laboratory experiments at Davyhulme were repeated at Salford on Salford sewage by Mr. S. E. Melling, B.Sc., the Cheshire county analyst, and chemist to the Salford River Conservancy Committee, the result being that the claims of the Manchester experiments were fully verified; and as we have a plant existing at the Salford sewage works which would enable us to translate these experiments on a fairly large scale, Mr. Melling and myself were instructed by our committee to test larger quantities of sewage, with results which, in our opinion, are entirely satisfactory.

The laboratory experiments consisted of drawing the air of the laboratory through a sample or samples of sewage by means of an ordinary Geissler pump for several weeks, allowing, at various times, the sewage to settle, decanting the more or less clarified liquid, recharging with another sample, and again resuming the drawing of air, this method continuing until the sludge accumulated to some 20-25 per cent of the bottle capacity. While with a small quantity of sludge indications were found of some purification, it was not until the above accumulation of about 20 per cent was obtained that good and reliable results were realised.

The plant already existing on our works suitable for the translation of the work to the larger scale is in our roughing filters. These occupy the site of two previously existing precipitation tanks, and are some 2,000 sq. yds. in area. They are filled to a depth of 2 ft. 6 in. with river gravel, and were designed to pass the whole of the tank effluent through after precipitation and sedimentation, prior to final filtration through the percolating filters. At the bottom of these roughing filters is a network of air pipes with ½-in. brass jets, each of the six filters (which are sub-divided into three) containing some 15,000 of these jets through which the air passes, and the whole were in daily use, not for aëration purposes, but as a cheap means of mechanically cleansing the filters when worked in conjunction with upward washing.

As the sum total of the method of treating sewage by "activated" sludge is agitation by means of atmospheric air, it will be readily understood that these beds required comparatively little alteration to fit them for the new process. The media of one section, or one-third of a filter, was removed, and a brick floor was built quite close to the aëration pipes so as to obviate, as far as possible, any stagnation of the sludge below the air jets. This section was again sub-divided into two, and we thus had a tank approximating 12,500 gallons.

The experiment in this tank was started on June 16th of this year, the tank receiving its first charge of crude sewage from the beginning of the detritus chamber, without chemicals, and air was passed through for several days, samples being taken every day for analysis. It was then allowed to settle, and the more or less clarified liquid was run away, and the tank received another charge, this method of an occasional charge obtaining until July 20th. On four occasions during this period 27 lb. of iron salt (a 10 per cent mixture of ferrous and ferric sulphates) was added to the sewage to form a nucleus for the sludge.

ANALYSES.

A series of analyses of the various crude sewages and effluents were carried out, and gave an indication of how the experiment was proceeding in its initial stages. As our first object was to get an accumulation of sludge in an "activated" condition, we decided to accelerate this by washing some humus which had been taken from the final effluent culvert free from heavy sandy detritus, and putting these washings into the tank. This was accomplished on July 20th and 21st, and the accumulation of sludge and water to a depth of 14 in. or 15 in. was agitated without the addition of any more sewage by means of air-blowing from this date until August 13th. On August 14th the fillings were recommenced, and samples were again taken at various times and analysed, the average of these analyses being given below.

A study of these results will show that after about two months we were approaching a condition in the tank when we could expect some purification, as the volume of activated sludge increased, the purification was increasing, and the time required for actual blowing was reduced from days to hours until we got to the period covered by the averages below which show best, worst and average results of twenty-five samples, all of three hours' blowing. This particular table is, perhaps, the most interesting as showing the possibilities of the system, the purification averaging thus:—

	Best result.	Worst result.	Average result.
On albuminoid ammonia	77	78	76
On four hours' oxygen	93	84	9
Of exceptional interest are the figures for dissolved oxygen	0·24	0·59	0·46

showing a clear 75 over the recommendations of the Royal Commission.

To sum up the actions of "activated" sludge from the practical point of view, we have (1) a quick flocculation of colloidal matter, (2) a carbonaceous fermentation which reduces the oxygen-absorbed figure, (3) a breaking up of the albuminoid content, with a quick oxidation of this nitrogenous matter. Dealing with these in the order named we find that a sample of sewage, after blowing for one hour, shows a very distinct change from the crude sewage, and after three hours' blowing and two hours' settling we have had samples that were quite as clear as drinking water, the average daily sample showing, if anything, only the faintest trace of opalescence. Of the reduction of the oxygen-absorbed figure, we have, in many analyses, evidences of very quick change. To quote a few taken haphazard:—

PARTS PER 100,000.

	Crude sewage.	After 1 hr. blowing.	Percentage purification.
Oct. 12th	8·3	1·83	78·0
Oct. 13th	11·0	1·8	85·8
Oct. 16th	8·7	1·45	83·3

These are generally indicative of what is daily happening after blowing for one hour only.

With regard to the oxidation of the nitrogenous matter, we can regularly find the presence of nitrites in from ten to fifteen minutes after commencing to blow with the activated sludge, and get from ·5 to 1 part per 100,000 of fully oxidised nitrates in one hour, the remaining two hours' blowing giving a total of from 1 to 2 parts of N as nitrates with the free ammonia reduced to anything between ·03 and a complete disappearance.

It may be argued that, with the above percentage purifications, the blowing may be stopped at the end of one or two hours instead of carrying on the oxidation more or less to finality, but the authors of the system find that the sludge loses some of its "activated" quality unless the oxidation of the nitrogen proceeds to practical completion.

On October 18th we commenced with three to four fillings per day, and by October 23rd we had accumulated in our 12,500-gallon tank more than enough sludge in an activated condition for our requirements, and having previously prepared the next section of

* Paper read at a Manchester District Meeting of the Association of Managers of Sewage Disposal Works on November 14th last.

* These descriptions of best and worst were given after consideration of the complete analytical figures of each sample.

[illegible] syphon, and after blowing three hours is allowed two hours for settlement, when it is run off. Approximately we fill, blow, settle and empty in seven hours, and as the capacity of our experimental tanks is now 34,500, if we allow for 25 per cent of sludge, we treat some 25,000 to 26,000 gallons per filling, or 75,000 in twenty-one hours. At the present time we are preparing a third section of 22,000 gallons for inclusion in the experiment, so that in two or three weeks' time we hope to be treating some 130,000 gallons per day by this new method.

[illegible] in this new method of treatment we are realising in one tank only all the results which have previously been obtained by means of chemical precipitation, sedimentation, or septic action, and final filtration through either continuous or intermittent percolating [illegible] tanks, and this in the short space of seven hours. The possibilities of the system are very great, and among the principal factors in any new scheme of sewage disposal not the least important will be the reduction in area of land required.

In the purification of sewage by this "activated sludge" principle there is an alternative to the fill-and-draw method which has as yet only been tried on a very small scale—*i.e.*, in small wooden tanks. I refer to the continuous-flow system. Our original 12,500-gallon tank is at present undergoing a little change to allow of this experiment, and I hope to have this at work within a day or two; its success or non-success lies in the future.

Another and important phase of the disposal of sewage by this method is the nature and quality of the sludge produced. Analyses show its high value as a fertiliser, its nitrogen content being some three times, and its phosphoric acid content twice, that of ordinary sludge, while the fatty matter, which is more or less condemned as a constituent of manure, is but about half of that in ordinary sewage sludge. We have here reasonable excuse to plead the old [illegible] it, and a manure of such a composition should, on drying, be readily disposed of in the open market at a price which would afford a fair margin of profit over the expense required to bring it into a saleable condition. We are ourselves preparing four small drainage areas on which to dry our excess of activated sludge, and we shall probably have more knowledge of the behaviour of this sludge in manipulating it for disposal, and of its practical use as a manure in a few months' time.

COST.

In this paper you will probably notice that I have said nothing whatever *re* the all-important question of cost. To give the cost in our own case would be a very difficult matter, and calculations to this effect would be subject to so much speculation that I should prefer more experience in the whole matter before committing myself to any definite figures; besides, we are using a plant which was inaugurated for something entirely different, and while it is successful in bringing about certain results, it by no means follows that it is the best that could be devised for the purpose, and, as numerous experiments are at present being made with the object of fixing a minimum amount of air, to give a maximum result, calculations at the present juncture might be very misleading. In our own case we have prosecuted the work with the one object of *proving the principle*, with plant already in existence, with a success which I venture to think cannot well be doubted.

In conclusion, may I suggest to you that in this matter things are at the very beginning, and there is ample room for managers of sewage works, in conjunction with their analytical chemists and civil and mechanical engineers, to prosecute a work which is [illegible] I believe, will be a considerable factor in formulating the sewage [illegible]

I should like to express my thanks to the chairman and members of the River Conservancy Committee of the Salford Corporation for permission to make public these results.

DRAIN OR SEWER?

ANOTHER HIGH COURT JUDGMENT.

Mr. Justice Sargant, in the Chancery Division on Tuesday, delivered his reserved judgment in the [illegible].

His Lordship said the question was whether the plaintiffs were entitled to enforce a charge upon the defendants for a sum expended in remedying defects to a conduit laying under Hessle-road, and that depended upon whether it was or was not a drain maintainable by the Corporation. The road under which the conduit in question ran was a cul-de-sac communicating with the back yards of cottages belonging to the railway company. These cottages were erected about 1861 upon land belonging to the railway company. The corporation had served the defendants with notice to abate a nuisance, and then had done the work themselves. The cost was £139 6s. 6d., which [illegible] £47 12s. 9d., which was the amount spent upon the drains and the road gullies, but had declined to pay £91 13s. 9d., which represented the amount spent upon the 12-in. conduit. They disputed their liability in respect of the road gullies, but, the amount being small, they paid it on condition that such payment was no waiver of their rights in respect of the 12-in. conduit. One of the points to be decided was whether Hessle-road was a public highway, and on this his Lordship said that, although the road had been dedicated to the public as a highway, inasmuch as they were permitted to use it, the soil of the road still remained in the defendant company. With regard to another point raised, he could not think that a single private drain must necessarily be a drain limited to the draining of houses or tenements, and became a public sewer immediately it drained land. It seemed to him that where a drain pipe was used exclusively for the drainage of certain private houses, and the public had no right of access to it, it remained a private drain, although surface water from a road might be drained into it. A public sewer meant a sewer that served the public generally. Whatever rights of way the public had acquired over this road, the ownership of the surface was left in the railway company, and the corporation had acquired no rights to break it up in order to get at this conduit. The railway company were left in exclusive possession of this 12-in. pipe, and the result was that the corporation were entitled to recover the amount of money they had expended upon it. He would accordingly make an order establishing their charge, and would give them the costs of the action.

Mr. Lawrence, K.C., for the plaintiffs, said a declaration would be sufficient.

His Lordship made a declaration accordingly, with liberty to apply if necessary.

Sewage Disposal at Crewe.—The new scheme of sewage disposal at Crewe, which has cost £50,000, has just been completed.

Northampton Fire Brigade.—The Northampton Fire Brigade has had a motor fire engine of the Merryweather "Hatfield" type in use for upwards of four years. During this period the machine, which is petrol driven, has done excellent work, and proved its superiority over the horse-draught fire engine. The motor was originally fitted with a pair of light telescopic ladders extending to 32 ft., but in order to increase the machine's sphere of usefulness, these ladders have been replaced by a new fire escape of the latest and most up-to-date design, capable of reaching a total height of 60 ft. when fully extended. This escape, which is of the type known as the "sliding carriage" design, has been supplied by the builders of the motor, and the makers have carried out the necessary alterations to the fire engine and fitted substantial supports to accommodate the new escape, and at the same time permit of its being quickly detached when required for use.

The Provision of a Municipal Water Service.*

By LEWIS MITCHELL, M.INST.C.E., M.S.I., Waterworks Engineer, Bolton.

The provision of an adequate supply of pure water for domestic purposes is one of the most important problems which confronts the engineer, and its practicability and economy frequently determine whether a town shall be a success or a failure.

Probably at no period have the value and necessity of a pure water supply been so generally recognised as in this utilitarian age, when it is perceived that this important and essential factor can be reduced to a numerical value, and proved to be a sound public asset. Almost since the day when "there went up a mist from the earth and watered the whole face of the ground" has this—one of the three essentials of life itself—been an object of paramount importance. In the early morning of the world's history it was recorded by the first waterworks engineer of whom we have any authentic account "that the herdsmen of Gerar strove with the herdsmen of Isaac, the son of Abraham, for the wells in the valley of Gerar and captured them, while Isaac removed from the valley and elsewhere digged a well for which they strove not."

In primitive times springs, brooks and rivers, pools and lakes, yielded the requisite supplies, and the earliest settlements were instinctively made in places where water was readily obtained. As long as human habitations were isolated, or only in very small groups, such a supply of water sufficed to meet all demands, and when, owing to drought or the experience gained by the inevitable pollution of the soil it was expedient to obtain another source, migration was easy, since the population was scanty and the land was free to all comers; but as communities increased there came a time when it was necessary for obvious reasons to construct special works either for getting underground water from a great depth or importing it from a distance.

Not infrequently the sites of towns and villages have been determined as much by the possibility of obtaining a supply of water as by other social factors. For example, the congeries of villages that now form London were at first detached from each other, each being built over a patch of water-bearing gravel, and the filling up of the interstices between them became possible only when some more general supply of water than that from wells in the gravel was provided.

In prehistoric times in Britain the shallow excavations made for pit dwellings and the shafts dug for the purpose of extracting flints from the chalk no doubt proved in places how water could be obtained beneath the surface of the earth, and led to the sinking of wells for supplies of water.

ANCIENT WATERWORKS ENGINEERING.

The construction of works for providing water for domestic supplies and for irrigation purposes dates back in other parts of the world to very early times. Hydraulic engineering is the most ancient, as it is probably the most interesting, branch of civil engineering. The railway engineer and the electrical engineer are, in comparison, but creatures of yesterday. In Persia, Egypt and Babylonia there is evidence that the hydraulic engineer had carried out works of considerable magnitude at least 2,000 B.C. In India efforts were made in very early times to preserve and utilise the rains and rivers, and in Beluchistan the great cyclopean dams of stone known as the Ghorbasta were erected, it is believed, about 1,800 B.C.—*i.e.*, over 3,700 years ago. In Greece, Athens was supplied about 520 B.C. with water conveyed by an aqueduct from an ancient spring called Callirhoe flowing from the base of a broad ridge of rock which crosses the bed of the Ilissus. Coming down to the beginning of the Christian era, we find that Rome had then a supply of water from works the remains of which excite our admiration. From the foundation of Rome in 754 B.C. to 313 B.C.—*i.e.*, for 441 years—the citizens were content with using water drawn from the Tiber or from wells or springs; but in that year the Appian water was brought into the city by the Censor Appius Claudius Crassus, who also had charge of the construction of the Appian Way. By the middle of the first century no fewer than nine aqueducts of various dimensions (the largest, Marcia, being 8 ft. 2½ in. by 5 ft. 7 in. wide, and several of them over 40 miles in length) were in use for conveying water from springs and from the river Anio, rising in the Apennines, to the Eternal City set upon seven hills. The cost of one of those aqueducts (Marcia) was, according to Fenestella, 180,000,000 "sestertii," or over £1,600,000. On the assumption that all the nine aqueducts were in use simultaneously, the quantity they could carry would be 70,000,000 gallons daily; but we know from Frontinus (who was the waterworks engineer of Rome in those days), and also from Pliny, that the nine aqueducts were seldom all in working order, two or three generally being out of use for repair. Making allowance for such, however, and for loss en route by unauthorised tappings of the conduits, and surreptitious abstractions which were winked at, and also for leakages, probably 45,000,000 gallons were daily delivered into the city, giving, approximately, 45 gallons per head per day to the inhabitants. This may not seem a very large quantity having regard to the great volume undoubtedly used for baths and fountains, but, on the other hand, we must remember that for purely domestic purposes the greater part of the people used only such water as was carried to their homes in jars upon the heads of slaves and other women, and that many local sources were also available.

FIRST ENGLISH SUPPLIES.

The Romans, not only in their own country, but in the countries they conquered, carried out works the magnificence of which testifies to this day to their skill as engineers. But after the fall of the Roman Empire the construction of waterworks on an extensive scale fell into abeyance. In Britain during the Middle Ages the cities and towns obtained their supplies from public wells, and in some cases water from such wells and springs was distributed by buckets or from casks mounted on wheels. The city of London was first supplied from springs at Tyburn in 1236, wooden pipes then adopted for distribution being used until as late as 1820. Tiverton had a town supply as early as 1240, Northampton in 1189, Bath in 1569, and Plymouth about 1590, but organised waterworks for the provision of supplies of water to towns and cities were not, generally speaking, established until the beginning of last century.

In those earlier days of waterworks a great deal was done by the enterprise of private companies, which provided water for hundreds of towns in this country where there were not in existence public bodies able or willing to perform the duty. Concessions were granted by Parliament to such projectors, who in many cases had no tangible reward, or had to wait a long time before any dividends were realised. In the majority of instances, however, the companies were not actuated by philanthropic motives, but sought a profitable investment for their capital, and under those conditions the supply of water to a town became a trading enterprise, and led to competition that sometimes produced disastrous results. The rates and charges for the commodity supplied were usually fixed by the special Acts of Parliament incorporating the companies, but the limits placed were so high that they were seldom reached. In the earlier Acts there were no restrictions as to the amount of dividend to be paid to the shareholders, nor any provisions to enable consumers to demand a supply. The only protection the public had was their power to set up a rival establishment; and this alternative presented so many difficulties and involved so much expense in doubtful Parliamentary contests that it was rarely tried. In the few cases where competition did take place the result was at first fierce rivalry, a double expenditure of capital, two or three sets of pipes in one street, two sets of canvassers touting for customers, two sets of officers and workmen, staffs of plumbers to transfer customers from one set of pipes to another, involving breaking up of streets; then when the rival companies had by their competition brought themselves to the brink of ruin they saw the folly of their ways, and agreed either to amalgamate or confine their operations to separate districts, so that in the end the public were worse off and were burdened with heavier charges than before the competition began.

As early as 1819 a Committee of the House of Commons came to the conclusion that the principle

* Lecture delivered recently at Bolton.

of compulsion was not applicable to water companies ... but it was not until 1847 ... that the first ... Act ... relating to water supply was passed ... [illegible] ... for the protection of the public ... [illegible] ... Act of Parliament.

Agency of Local Authority

It is now ... [illegible] ... that a matter of ... [illegible] ... to a committee of the governing ... [illegible] ... be left in private hands, but should be one of the primary functions of the responsible authority of a town or district. Local authorities are ... [illegible] ... better placed than companies in connection ... [illegible] ... the floating up of streets for paving, the collection of rates, the enforcement of regulations, in ... [illegible] ... and in being able to borrow money at low rates of interest. In some respects no doubt a company possesses advantages over an elective ... [illegible] ... continuity of purpose and action, in conducting negotiations, in personal supervision, ... [illegible] ... from influences of friends and political ... [illegible] ... and determine the conduct of public men. Notwithstanding all this, the balance of advantages is decidedly in favour of waterworks being in the hands of local administrative ... [illegible] ... responsible to and representative of the consumers, whose business should be to see, not that a maximum dividend is obtained, but that there ... [illegible] ... of doubt or mistake as to the purity of the water and its sufficiency for all the domestic and trade requirements of the poorer as well as the wealthier classes, and for all public and ... [illegible] ... purposes, and with whom in this connection the paramount question should not be "how cheaply can a supply of water be provided," but "what is the very best supply that can be obtained at a reasonable and practicable price?"

Practically all the leading municipalities have recognised this as an important public duty, and have secured control of the water undertakings by buying out the companies by which they were established. To-day the value of water undertakings in this country alone which are controlled municipally ... [illegible] ... a sum than £200,000,000. Companies first, then corporations, have in the face of opposition often bristling with real and assumed difficulties, constructed and are now constructing ... [illegible] ... for the provision of water supplies which in ... [illegible] ... of magnitude, utility and boldness of conception have never been equalled. The magnificent ... [illegible] ... works of the cities of ancient Greece and Rome were chiefly used for the supply of public baths, fountains and pools, and in rare instances to the ... [illegible] ... of kings and the mansions of the aristocracy, but the supply now afforded to every house, however large or small, whether owned or occupied by patrician ... [illegible] ... and on under constant pressure, always available for purposes of necessity, comfort, or convenience, was unknown and undreamt of by the philosophers of ancient Greece or the mighty Emperors of Rome.

Quantity of Water.

The first consideration in connection with the provision of a water supply for any city, town or district, and the laying out of the necessary works, is to determine what quantity of water will be required; and in practice it has been found most convenient to speak of it as at the rate of a certain number of gallons per head of the population per day. No exact rule can be laid down as to what quantity of water should be provided per capita, as each town has its own particular rate depending upon a variety of circumstances, such as the trade or manufacturing purposes, the habits of the people, and the sanitary conditions. For example, in London, where there is but a comparatively small quantity required for trade purposes, the consumption is 32 gallons per head per day. In Manchester the consumption is 33 gallons, but one-half is used for manufacturing purposes. In Glasgow it is 58 gallons per head per day, but of this 20 gallons are sold for trade purposes, leaving 38 gallons for domestic use. Bradford requires 40 gallons, of which one-half is used for trade; and Bolton uses 24 gallons per head per day, of which two-thirds, or 16 gallons, is for domestic, and one-third, or 8 gallons, for trade purposes. The average for the principal towns in this country is 35 gallons, ranging from 18 for Norwich to 70 for Paisley. In villages and agricultural districts the rate may be taken as from 15 to 18 gallons. In the United States we find New York requires 90 gallons, Boston 60 gallons, and Washington 138 gallons, the average being nearly three times as high as in this country.

It will be readily seen that the necessity for determining with some exactitude the amount to be supplied is of vital importance, for it governs every ... [illegible] ... detail of the works, size of main pipes, and the capacities of reservoirs, and in arriving at it regard should be had to the fact that, as sanitary principles become better understood, and as the luxury of a good supply becomes increasingly appreciated, the demand will correspondingly become greater. Having ascertained the rate per capita, and the population to be provided for, the quantity of water required to meet all demands is easily arrived at; but in this computation it is imperative to consider also what the rate of increase of the population is likely to be in the future, and make the scheme of works sufficiently comprehensive to meet all possible requirements within a reasonable period. The works of the Corporation of Bolton now supply 7,500,000 gallons—*i.e.*, over 33,000 tons per day. To put it differently, the water required to meet the daily needs of Bolton is equivalent to the area of Victoria-square flooded to a depth of 11 ft.; and if that quantity had to be brought in watercarts each containing 30 cwt., we should have a daily procession of vehicles extending for 70 miles.

Quality of Water.

The next important inquiry is as to the quality or character of the water required. One characteristic is hardness. The hardness of water is of two kinds—temporary and permanent. Temporary hardness is due to the presence of carbonate of lime or magnesia, which is kept in solution by the adventitious presence of carbonic acid, and may be removed by boiling, and permanent hardness is due to the presence of calcium or magnesium sulphates, chlorides or nitrates, which, owing to their solubility, are most difficult of separation from water. The water supplied to the principal towns in this country varies from 1 deg. to 30 deg., of which these may be cited: Glasgow, 1¼ deg.; Manchester, 3 deg.; Liverpool, 4 deg.; Bolton, 5 deg.; Edinburgh, 7 deg.; London, 15 deg. to 20 deg.; and Sunderland 30 deg.

It is essential to determine whether a supply of soft water is imperative for the principal industries of the town. Where trades such as wool-washing, dyeing, bleaching, tanning, calico printing, and the like are extensively conducted a soft water is absolutely necessary. In towns like Bolton, Manchester and Bradford soft water is indispensable. Glasgow, which is proud of its very soft water, effected an annual saving of £40,000 in its bill for soap when Loch Katrine supply was introduced, the reduction in hardness being from 8 deg. to 1½ deg. (Theoretically, the use of water containing 15 deg. of hardness involves a loss of 21½ lb. per 1,000 gallons, which, at 3d. per pound, equals 5s. 4d.) As a rule soft water from moorlands is slightly coloured with peat, which may be greatly reduced by storage and filtration; but not infrequently it possesses the power of actively attacking and dissolving the lead of service pipes and cisterns—*e.g.*, the raw water drawn from the Belmont watersheds is acid, and has a distinct action upon lead, dissolving, on occasions, as much as ¼ grain of lead per gallon, and unless its acidity were neutralised, its effect would be very pronounced in causing cases of plumbism. It is singular that the soft peaty waters from the moorlands of Lancashire and Yorkshire in particular are acid (surely this is in contradistinction to the character of the people in the counties of the Red and White Roses!), but the medical officer to the Local Government Board stated, in his report for the year 1890, that "upwards of 600,000 persons in the West Riding of Yorkshire alone appear to be, at one or another time, liable to lead poisoning by the drinking of water supplied to their districts." Bolton, Keighley, Bradford, Sheffield and other towns were then suffering in consequence of portions of their supplies being of an acid nature, and the Local Government Board deputed several of their medical officers to conduct certain chemical and bacteriological studies to determine the conditions under which waters can acquire the power of dissolving lead. The acidity, as those experts found, is not, as some observers think, due to sulphuric acid which is present in the air in immense quantities in districts where certain iron and other ores are smelted, nor to the slow oxidation of iron pyrites in the soil (which, as is well known, forms sulphuric acid when in the presence of oxygen and moisture), but to the presence of certain bacteria in the humic substance of the peat.

(To be continued.)

Law Notes.

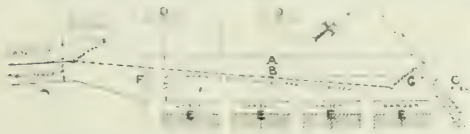
EDITED BY J. E. J. LEGNIER CONDER, 37 Moorgate Street, E.C., Solicitor of the Supreme Court.

The Editor will be pleased to answer any questions affecting the practice of engineers and surveyors to local authorities. Queries (which should be written legibly on foolscap paper, on one side only) should be addressed to "The Law Editor," at the office of THE SURVEYOR, accompanied by the writer's name and address, and correspondents who do not wish their names to be published should also furnish a "nom de plume." Where necessary, copies of local Acts or documents referred to should be enclosed. All explanatory diagrams must be drawn and lettered in BLACK ink only, and in such style as to be fit for direct reproduction—i.e., without re-drawing or amendment. Unless these conditions are complied with we cannot undertake to reply to queries.

QUERIES AND REPLIES.

In order to avoid confusion queriists are requested to use distinctive words as noms de plume. The letter X, combinations such as X Y Z, and words such as "engineer" and "surveyor," should never be used.

PRIVATE STREET WORKS—WIDENING OF OLD FOOTPATH.—J. W. W. writes: The ancient public footpath, 6ft. wide, marked A on plan is maintained by the town council. Several years ago the owner of the field marked C enclosed the strip of land B, 10ft. wide, and removed the fence on the south-east side of the old public footpath A, and erected it on the south-west side of B, thus leaving a clear space 16ft. wide open to the public; this he did with a view to forming a vehicular approach to his field C, which is outside the municipal boundary. The houses marked D have been built upwards of twenty years, and are drained across their front gardens into the public sewer in Crown-street. Those marked E were built five years ago, and are also drained into the



public sewer at Crown-street, as shown by a thick dotted line on plan; this drain was put down by the then owner of the property marked E, but nothing was done with respect to the construction of the street along the frontage of these houses. Crown-street is an old public highway 30ft. wide. The Model By-laws are in operation here, under which new streets must be 40ft. wide, and the Public Health Acts Amendment Act has also been adopted. Will you please inform me if the owners of the property D could be called upon (1) to give up so much land as would be required to make the street 40ft. wide, (2) or to bear a proportion of the cost of making the roadway from F to G, also if the corporation, as owners of the public footpath A, and the owner of the field C are also liable to any cost in the matter? The owners of the property E would, of course, be responsible for their share according to the frontage owned by them.

The owners of D cannot be called upon to give up any part of their land for the purpose of widening the street, but the corporation could purchase the necessary land under sec. 155 of the Public Health Act, 1875. In proceedings under sec. 150 of that Act these owners would be liable for their proportion of the cost of making up the road from F to C, including the old footpath. The owner of the field C would not be liable, his field not being within the district—see *Hastings Borough Council v. Birkbeck, &c.*, Sessions, 1906, 1 K.B. 521. The owners of property E would be liable according to their frontage. The corporation would not be liable as owners of the footpath, as this now forms part of the road, and under the last clause of sec. 150 the powers are exercisable with respect to the entire road as fully as if the whole of it was not repairable by the inhabitants at large. The foregoing applies to the 16-ft. road as it now exists. If the corporation buy land from the owners of D for widening the road, the added strip will be repairable by the inhabitants at large, and the frontagers cannot be charged with making it up—*Poplar Assessment Committee v. Bird*, 71 J.P. 364.

WATER SUPPLY—COMBINED DRAIN.—"GLEN" writes: Several houses have been erected on an estate in a rural district, the natural drainage area of which is into an adjoining urban district. The houses are built on freehold sites and each is the property of separate owners. The first house to be erected was nearest the urban boundary, and the owner entered into an agreement with the urban council to drain into their sewer. The owner of the estate then continued the main drain from the end where the first house joined it, along the road in the rural district, to take each of the remaining sites. As each house was built it was drained into this drain or sewer under agreement with the urban council, and has paid a [illegible] each year to the urban council. The various owners of the houses laid, at their own expense, a water pipe for the supply of water to the various houses, and by agreement with the urban council connected with the urban supply at their boundary, and pay a water charge to the urban council each year. Some years afterwards the owner of the estate laid a 3-in. water main in the road past these houses to a house being erected at the end of the estate, towards which the owner of the new house paid a proportion of the costs. This main is also connected with the urban supply. The original water pipe now proves to be insufficient to give a proper supply to some of the houses, and some of the owners wish to connect with the new main laid by the owner of the estate. Before they can do so, however, they are asked to pay a proportion of the cost of the new main, and also the proportion of the cost of the drain which was laid, and into which they have been draining for the past seven years. (1) Can the owner of the estate prevent the various owners connecting to the water main unless each pays his proportion? (2) Is not the main drain a "sewer"? (3) If a sewer, would it not be vested in and repairable by the rural council in whose district it is situated? (4) Can the owner of the estate claim the proportion of the cost of the drain seeing the houses have been draining into it for the past seven years?

(1) Assuming the main to have been laid by the estate owner under sec. 1852 of the Waterworks Clauses Act, 1847, no one else would have a right to connect to it without his consent, and he could make it a condition that they should pay a proportion of the cost. (2) Yes, from the point at which the drain from the second house is connected with it. (3) Yes, unless it falls within either of the exceptions mentioned in sec. 13 of the Public Health Act, 1875. (4) Not if it is a sewer.

RE-NUMBERING STREET.—"W. L. F." writes: Under sec. 64, the Towns Improvement Clauses Act, 1847, my council has directed me to renumber a certain street at the council's expense, i.e., the council providing and fixing the enamel numbers, with the council's workmen, at the expense of the ratepayers. Kindly let me know if the council has the power to do this.

This section provides that the local authority "shall from time to time cause the houses . . . to be marked with numbers as they think fit." And sec. 65 provides that "the occupiers of houses . . . . shall mark their houses with such numbers as the local authority approve of, and shall renew such numbers as often as they become obliterated and defaced." In a note on these sections in "Lumley's Public Health Acts" (8th edition, pp. 1428-9, it is stated that "the numbers must be provided at the expense of the occupiers, and there is no legal authority for charging them to the rates."

COMBINED DRAIN.—"Drains" writes: A owns two houses the drains of which, after being joined by the drain from a house owned by B, are connected to a ditch. The two owners are served by notice from the urban district council to abate a nuisance caused by the sewage flowing from the combined drain or sewer into the ditch. Are the owners or the council responsible? Is the combined drain after the junction of house No. 2 a sewer?

This drain is undoubtedly a "sewer" from the point at which the drain from the second house connects with it. If the Public Health Acts Amendment Act, 1890, is in force in the district, and the drain itself is in an improper condition, the expense of rectifying it can be put upon the owners under sec. 19 of that Act. But if the nuisance arises merely from the discharge of sewage into the ditch (the drain itself being in proper condition), then the council are responsible, whether the Act is in force or not.

We have to draw the attention of queriists to the directions laid down for their guidance in regard to the preparation of diagrams. Rough sketches obviously cannot be made use of, and we should be obliged if correspondents would therefore send only carefully-prepared drawings, preferably about 6 in. in width, and without colouring or wash of any description. Failure to observe these rules will involve the risk of queries remaining unanswered.

Country Roads Board of Victoria.

FIRST ANNUAL REPORT.

[illegible] not so much with the constructional work carried out since the appointment of the board in March of last year as with the preliminary work connected with the investigation of the highways in those portions of the State that have been visited, the conditions of the roads in the districts, the existing methods of dealing with the roads by the Government and municipalities, and the board's proposals for giving effect to the provisions of the Country Roads Act.

[illegible] advanced by the board in proof of the handicaps under which settlers are at present labouring is the statement that, during the inspections which were carried out in one of the ten districts into which the State has been divided for convenience in making investigations, so much interest was taken in the proceedings that men travelled for miles through rain and mud in order to learn whether they could hope for improved road conditions. Some were met congregated in groups on the tracks in the daytime, while others came as deputations at night to urge that something might be done for them. Many of them actually stated that, although they had been in occupation for fifteen and twenty years, they had not yet had a wheeled vehicle on their holdings. Their evidence to the effect that the country in some parts was retrogressing, and that there is less population in these localities than there was fifteen or twenty years ago, was confirmed by the existence of numbers of deserted homes and holdings which had been abandoned for no other reason than the absence [illegible]

It is expected that the proposals that have been outlined for making roads through this territory will effectively relieve the settlers in the vicinity of certain roads, but, owing to the broken nature of the country, there are hundreds of settlers whom the main roads as laid out can never serve, while there are many more who will be unable to use them until connections are made with the main roads from the roads or tracks on which their homes are situated. While these connecting roads are less important than those determined upon as main roads, they are nevertheless essential to the settlers, and to the development of the country, and without them the full advantage which should result from the construction of the main roads will not be reaped. The board therefore considers that it is its duty to bring this aspect of the question under the notice of the Government with a view to the consideration of the claim of the settlers so situated.

Apart from the great handicap such roads are to the settler in his struggle to clear his land and earn a living, they are also a serious factor in retarding the growth of country townships. In the older settled parts of the State it is the custom of the farmers, with their families, to visit the townships at regular intervals for the purpose of transacting their business with the local storekeepers. This, in many instances, is the only outing that the farmer's wife and daughters enjoy, and is a welcome relief from the sameness of everyday life on the farm, but even this little relaxation is denied to many of the wives of settlers, owing to the impassable condition of the roads, with the result that the townships do not reap the full benefit of the trade from the surrounding districts.

Speaking generally of the roads throughout the areas of the State already inspected, the board describe their condition as "anything but satisfactory." They add, however, that there are exceptions to this general statement. In a number of the Western District shires the roads are in good condition. There is also a considerable mileage of good trafficable roads in other districts. In these districts materials in the shape of basalt and gravel are easily accessible, and the topography of the country presented few engineering difficulties in the way of road location; but, with these exceptions, there are only isolated examples of roads that may be classed as good. In the Gippsland district few roads are to be met with that may be termed passable roads beyond a radius of 4 or 5 miles from the principal towns on the main lines of railway. Of this district it is said that "road construction has never kept abreast of settlement, and the task has quite outgrown the resources of the shire councils."

The report continues: "In this hilly, timbered region, road building is more than ordinarily a slow and expensive process, and it is evident that without some form of State assistance the municipal councils would be unable, from their own resources, to serve the outlying districts with passable roads for the next twenty years.

"In the older settled districts inspected there has been an unmistakable deterioration in the character of the works executed from the period when the District Roads Boards ceased to have control of the main roads to the present time. This remark applies also to the standard of bridge design, which, under the *régime* of the District Roads Boards, was characterised by an air of permanency.

"There could be no better illustration of the extravagance of a policy of cheap construction than is afforded by a comparison of the older and later methods. Many of the old solidly built roads inspected have stood the traffic of years, and are still in fair condition, while many roads of comparatively recent construction have failed utterly. The reasons for this deterioration in the standard of road construction are lack of funds and the absence of a systematic policy. With each shire council working, however conscientiously, for its own interests, and each councillor in the interests of the ratepayers in his own riding, there can be no systematic system of road construction."

In the desire to make the available funds go as far as possible, the general practice is to vote annually a portion of the municipal funds to the construction of isolated patches of roads in sections seldom exceeding ¼ mile in length distributed throughout the shire's ridings. The board admit that, had these sections been designed permanently to improve the worst portions of the roads with a view to their being linked up in a systematic scheme of construction in the future, the policy would be sound enough, but frequently the work has been done in the cheapest possible manner, and without a complete survey of the whole road to insure that the sections constructed would form suitable links in the completed chain.

GRADIENTS, FOUNDATION AND DRAINAGE.

At its inception the board decided that no expenditure in the way of permanent improvements should be incurred on any road, and particularly on unmetalled roads, until it was ascertained by investigation that the location and grades could not be improved at a reasonable cost. While this has occasioned the employment of considerable time and labour in surveys and investigations, it was strongly felt that it would be a sound policy first to locate and grade roads on the best possible routes—even if their final construction had to be delayed—rather than hasten expenditure on existing roads which would for all time be a freight tax on the community.

In any works of road construction undertaken by the board in conjunction with the municipal councils the standard of construction will be made on as sound lines as possible with the materials available, keeping in mind the nature and volume of traffic that now uses, or is likely to use, the roads. The board, as trustees of the fund placed at its disposal, has on all occasions made it clear that, as far as these funds will admit, the best available materials will be used, in accordance with approved modern practice, in the structure of any roads to be subsidised with the funds at its disposal.

Fortunately, in most districts of the State visited, boggy or waterlogged soils are exceptional, and only in those instances where the conditions are such that ordinary macadam would be insufficient, and where suitable stone and labour is available for hand-pitching, will any special foundation be provided.

In other cases, where the foundation soil is unstable and the traffic considerable, a medium course will be followed, which is a compromise between the systems of Telford and Macadam—viz., the laying of a bottom course of broken stone of 2½-in. to 3½-in. gauge metal

The Surveyor
And Municipal and County Engineer.

as a foundation course, which, after rolling, will be covered with a consolidating coat of 2-in. stone, well rolled and bound with clean binding of gravel, chippings, or coarse sand, the bottom coat being considered as the foundation, and the upper the wearing coat, which may be renewed or thickened and strengthened, should increased traffic require it. It is pointed out that, although this method may not have the stability of a hand-pitched foundation, it is much less costly.

Where the foundation consists of wet clay likely to work upwards and exude through the metal, it is suggested as advisable to spread a layer of gravel, sand or sandy loam, and roll this with a horse roller before laying the bottom course of metal. It is further pointed out that it is imperative that the road, to withstand the weight of traffic without injury, should have a foundation, either natural or artificial, that is thoroughly solid and rigid, otherwise the subsoil will yield beneath surface loads, and the road surface will sink and become permanently deformed, causing hollows or ruts to remain. Other advice given by the board is that, should the road bed be ineffectually drained, it will be still more liable to yield, it being added that on low-lying or flat ground it is usually inadvisable to break into the natural surface any more than is necessary properly to grade the road bed. A common error noticed in road-bed formation, it is also remarked, is the practice of excavating or "boxing out" the metal bed to a uniform depth and cross-section, irrespective of the nature of the subsoil or the natural drainage facilities. To excavate the metal bed on low-lying flat ground, where there is insufficient fall from the bottom of the bed to the water-table, is aptly described as being equivalent to spreading the metal in a drain.

Typical cross-sections of roads for adoption under this and other varying conditions, as well as a longitudinal section, showing method of grading by means of vertical curves, are illustrated in appendices to the report.

CAMBER.

The question of road crowns has been the subject of frequent discussion between shire councillors and the board. While only a small number of shire engineers appear to [illegible] the report states, are induced, "against their better judgment, to adopt a barrel-shaped road to meet the popular but erroneous idea that this is necessary for the drainage of a road, forgetting that no degree of convexity will allow of free drainage from the road if the surface is allowed to become worn into holes and ruts." The absence of rolling is quoted as another reason for roads being made with a steeper camber than is desirable. The report also emphasises the fact that, in the case of roads constructed with an excessive convexity, the tyres of vehicles do not bear evenly upon the curved surface; consequently, the whole weight of the wheel load is concentrated on one edge of the tyre, which cuts into the road. In this case any increase in the width of tyres will, it is pointed out, have little effect in the preservation of the road surface.

MATERIALS.

Apparently the effects of modern traffic are just beginning to be felt in Australia, and principally in the large centres of population. In Melbourne the advent of the motor bus has brought the problem home to the metropolitan councils, who are coming to realise the fact—already recognised in older countries—that ordinary weak macadam roads are not suitable for this form of traffic, and where these vehicles are constantly in use in large numbers such roads will soon be broken up.

Considering the immense mileage of roads awaiting construction in the country, the choice of road-making materials, it is realised, must be limited to broken stone or gravel for many years to come, if only for reasons of economy. The rate of increase of motor transport in the future cannot be predicted, as the increasing reliability of these vehicles, together with an improvement of the roads, will tend to encourage their use for transport of produce. The board consider it desirable to anticipate this traffic by making the best possible use of the materials available, and the provision of reasonably sound foundations on the main traffic routes.

There are few localities in the portions of the State already inspected where supplies of stone or gravel cannot be obtained within reasonable distance. In some localities where road works are in progress it has been necessary to transport road metal for long distances by rail, not because there was no stone procurable close at hand, but because no effort has been made to prospect for and develop the stone deposits in the district. In several instances the board's officers have already been successful in finding stone suitable for road purposes, the existence of which was not known locally. In other instances, where suitable stone is known to exist, it has not been availed of owing to the inability of the municipal councils to undertake the capital expenditure of a quarrying and stone-breaking plant. In one instance the board observed that a comparatively inferior class of road metal had been transported by rail for a distance of 73 miles at a freight charge of 3s. per cubic yard, while on the side of the road where this metal was being used there existed an outcrop of a much superior basaltic stone. The reverse was usually found to be the case, and as a rule the road authorities have been tempted to use local material of inferior quality when more suitable and durable materials could have been obtained at a small additional cost.

Owing to the time occupied in its preliminary investigations, and in the pioneering work incidental to the organisation of a new department, the board has not yet been able to enter upon a thorough and systematic investigation as regards road-making materials, other than making observations in a general way of the materials that have been used by the several authorities for the construction of roads.

The Melbourne University authorities are co-operating with the board in the matter of testing materials. They are giving the same terms that they grant to other State engineering departments—namely, that all tests shall be carried out free of charge. The board will thus have the effective use of the testing-plant at the Engineering School, which plant consists of 100,000-lb. testing machine, cement testing plant schlerscope, and they are now constructing an abrasion machine, which will shortly be finished. There is also another testing plant on order, and systematic investigation of road material and its cementitious value, together with asphaltic substances, can be undertaken. It is the board's intention, as soon as practicable, to enter upon this research work. Samples of stone will be obtained from every district throughout the State for the purpose of testing their suitability for road-making purposes, and it is proposed to tabulate the results of these tests so that the different classes of stone obtained from the various districts may be classified in a manner to indicate their suitability for road making under the various traffic conditions.

ROAD-MAKING MACHINERY.

The board comment on the fact that there is so little in the way of efficient road-making appliances owned either by the councils or by private contracting firms. Many of the municipalities, as a matter of

[illegible] have no road-making appliances of any description [illegible] even a horse roller.

WIDTH OF ROADS.

[illegible] consideration of the question of the [illegible] to be constructed under the provisions of the Country Roads Act the board has [illegible] a width of 12 ft. on main roads, of [illegible] less important roads, and 15 ft. to 16 ft. on the more important highways. While a width of 9 ft. to 10 ft. is sufficient for a single-track road it has been noted that these narrow roads are seldom satisfactory. For the national arterial roads and other roads which carry considerable traffic, a width [illegible] 15 ft. to 16 ft. is considered sufficient for a double-track road—a width which will allow two vehicles to pass one another without their having to leave the metalled portion of the carriageway.

Many of the old roads have been pitched and metalled for a width of 20 ft., and even wider; but it is considered unnecessary to incur the expense of metalling a greater width than 16 ft., excepting where these important highways receive the concentrating traffic at the approaches to large centres of population, where the width may be increased to 18 ft. or, in exceptional cases, to 20 ft.

Where main highways pass through country towns it is proposed to adopt a width of 18 ft., leaving the local authorities to bear the cost of any additional width they may consider necessary for local interests.

ENGINEERING STAFF.

The first engineer to be appointed to the board's staff was Mr. A. E. Callaway, formerly engineer to the shire of Woorayl, an officer with a long and varied experience in road location and construction, particularly in rough forest country. Mr. J. R. Kemp, formerly shire engineer for Karkarooc Shire, was also appointed in November, 1913. These officers have been engaged in the examination of plans and specifications submitted by the shire councils, the investigation of road and bridge proposals, and in the inspection of road works in progress.

In addition to road location, surveys have been undertaken by the board's own staff, where the work was urgent and where it was not possible to obtain the services of the shire engineer, owing to the pressure of other shire work, or in cases where important main roads formed the boundaries of adjoining shires, or passed through a number of shires, and it was desirable to adopt a uniform method of construction and supervision throughout, and in certain instances where the shire councils requested the board to undertake the surveys. This work has occupied a considerable portion of the time and attention of the engineering staff, and necessitates the constant employment of four or five survey parties.

Up to June 30th the total length of road surveys completed by the board's staff was 173 miles.

TRAMWAY BILLS FOR NEXT SESSION.

Among the Parliamentary notices for the proposed construction of new tramways are those of the London County Council to extend their present tramways to new termini within the City of London at Tower-hill in lieu of Aldgate, and Smithfield in lieu of Farringdon-street. Various short extensions in the Hackney district are also proposed. Many of these scheme are revivals of proposals to which Parliamentary sanction has been refused in former Sessions. It is also sought by the council to obtain authority to run coupled and trailer cars on lines north of the Thames, a method of working which already obtains on the southern portion of the system.

Edinburgh Corporation are applying for a Provisional Order for new tramways and a tram road in the Colinton and Corstorphine districts.

Dunfermline Town Council are making application for a Provisional Order authorising the construction of a tramway between Dunfermline and the new Rosyth dockyard; also to link up tramways in the Inverkeithing and Forth Bridge districts with those of West Fife.

Glasgow's Water Scheme.—The Corporation of Glasgow, at a special meeting held on Tuesday, decided to proceed with the river Turk water scheme, the estimated cost of which is £327,000.

THINGS ONE WOULD LIKE TO KNOW.

(Contributed.)

Doesn't the interesting account in the last issue of THE SURVEYOR of the small professional fees charged by that great engineer John Smeaton compare favourably with the story of another great engineer of more modern times who, while then charging his clients as many guineas an hour as Smeaton charged per day, seized the occasion, on being honoured by being made a F.R.S., of pointing to these letters at the end of his name when certain clients complained that he proposed to charge them more than formerly, and saying: "Do you know what these letters stand for? 'Fees risen since!'" Is it altogether a matter of surprise that he got the additional fees?

* * * *

Is not Liverpool to be congratulated on always appearing to be a little ahead in improvements? Shall we not watch with considerable interest the result of the proposed lighting of some of the new boulevards with acetylene gas? Was it not Liverpool that some years ago made such extraordinary strides in the science of street lighting, and clearly demonstrated that the use of gas as a street illuminant, if judiciously and scientifically allocated, was capable of producing a better effect than electricity, except under certain unfavourable conditions? And did not these experiments lay the foundation of better lighting in most of our towns and cities?

* * * *

As reinforced-concrete roads seems to be coming to the front, it would be interesting to know what gas and water authorities have to say with regard to them. Will the difficulties of opening trenches in such roads be great as are frequently suggested, and will the stability of the whole road be endangered if a longitudinal trench is cut right through the reinforcement? Will it not be interesting to see what will be the results of this new development in carriageway construction?

* * * *

Is it not interesting to find that Mr. Matthews Jones, the new president of the Institution of Municipal Engineers, in dealing, in his inaugural address to that body, with the subject of paving carriageways in a city like Chester, should speak so favourably of the adoption of granite setts? Is it not rather remarkable that there is evidently a rather strong feeling in favour of this description of pavement now prevalent among many men who have made the study of street pavements a specialité? Has not the introduction of the rubber tyre tended greatly to minimise that bugbear of noise which has hitherto militated so strongly against the larger employment of stone setts as a pavement?

* * * *

Would not the ordinary individual consider that a salary of £120 per annum was not an excessive amount to pay for professional services, especially when one realises that most skilful artisans can command better wages than that? Why is it, therefore, that members of local authorities throughout the country appear to look with horror on the idea that £120 per annum should be the minimum salary to be paid their surveyor? How is such a state of things to be remedied? Does it rest with the Institution of Municipal and County Engineers?

* * * *

What has become of the suggestion to form a "Highways Engineering Association," at which papers dealing with road construction and kindred subjects would be discussed? Has not the war dislocated a large number of proposals and suggestions for engineering progress which will now have to wait indefinitely for better times?

* * * *

Would it not be interesting to learn what has really been the result of the report on intercepting traps on house drains which was made by a committee of the Local Government Board some time ago? Are intercepting traps still being fixed on house drains? And if not, how is the difficulty with regard to the by-laws of the district overcome if intercepting traps are therein specified? Would not some further correspondence on this question be somewhat enlightening at the present time?

Assistants' and Students' Section.

CONDUCTED BY SYDNEY G. TURNER, ASSOC.M.INST.C.E.

All communications in regard to this page must be addressed to The Editor, St. Bride's House, 24 Bride-lane, Fleet-street, E.C. Envelopes must be marked "Assistants' Section" in the top left-hand corner. Correspondents are invited to submit questions for consideration and answers to the questions which appear. For the contributions considered to be the most meritorious, one or more premiums in books will be awarded monthly. Diagrams must be drawn to scale on separate sheets, ready for reproduction.

QUESTIONS.

Two weeks answers are invited to the following questions.

442. Building Materials. What are ceramic tiles, and how are they made?

443. Vectors. What are vector quantities? Explain how they may be added together graphically.

444. Strength of Shaft. Find the relation between the stress on a twisted shaft and the moment producing it. Find the least diameter of a solid steel shaft to transmit 200 horse power at 150 revolutions per minute, the stress being limited to 9,000 lb. per square inch.

445. Cement Testing.—Sketch and describe the apparatus necessary for conducting the bushe, weight and specific gravity tests for Portland cement.

446. Materials.—What is Mexican bitumen? Is it a natural product like Trinidad lake bitumen, or is it a mixed, a trade term for a by-product of petroleum? If the former, what part of Mexico does it come from? (H. E. W., *Tottenham.*)

[The Editor is at all times glad to hear from readers who desire to submit questions regarding matters of general interest, points of daily practice, &c., for insertion in the "Assistants' and Students' Section." Questions which are published are taken into consideration, as well as other matter, in awarding the Monthly Premium.]

REPLIES TO QUESTIONS.

441. Bending Moment. A beam of 100 ft. span has a load of 2 tons per foot-run uniformly distributed over 40 ft. of its length, commencing at 20 ft. from the left-hand abutment. Draw the bending moment diagram. ("Ajax.")

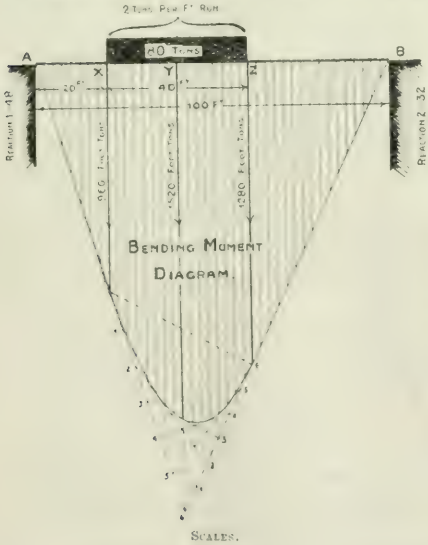
Before the bending moment diagram can be drawn it is necessary that the bending moment must be calculated in three places—in the centre of the load and at each end. The elevation of the beam, with the load in position, should be drawn to scale as shown. The next process is to ascertain the reactions at each abutment, and for this purpose the weight can be considered as being concentrated at the centre of gravity. The weight of the distance to the right-hand abutment, by the total span will give the reaction at the left-hand end, and vice versa. The reactions are therefore:

$$\frac{80 \times 60}{100} = 48 \text{ tons, right} \qquad \frac{80 \times 40}{100} = 32 \text{ tons.}$$

To calculate the bending moment at any point, multiply either reaction by the distance from the reaction to the point; but if any weights are situated on the distance a deduction must be made equal to the intervening weights multiplied by the distance from their points of application to the point where the bending moment is required to be found. Each calculation can therefore be checked by making calculations about each abutment. The BM at X is therefore about reaction A $48 \times 20 = 960$ foot-tons, and about reaction B $32 \times 80 - 80 \times 20 = 960$ foot-tons.

The BM at Y is also about reaction A $48 \times 40 - (40 \times 10) = 1{,}520$ foot-tons, and about reaction B $= (32 \times 60) - (40 \times 10) = 1{,}520$ foot-tons. The remaining calculation for the bending moment at Z is: about reaction A $48 \times 60 - 80 \times 20 = 1{,}280$ foot-tons, and about reaction B $32 \times 40 = 1{,}280$ foot-tons.

The three bending moments are set down to scale from the points X, Y and Z, and the diagram is constructed as illustrated. The bottom portion of the diagram is a parabola, which is constructed as shown by the dotted lines. The length of a vertical line drawn down from any point of the beam will give the bending moment at that particular point when measured to scale. The weight and thickness of the beam are neglected in calculations of this kind. (P. H., *Walthamstow.*)



Scales.
1 in. = 40 ft.
1 in. = 600 ft.-tons.

SOME RECENT PUBLICATIONS.*

ENGLISH, FRENCH AND GERMAN VOCABULARY FOR WATER SUPPLY IN THE FIELD. By Philip Parker, ASSOC.M.INST.C.E., 25 Victoria-street, S.W.

This exceedingly useful vocabulary has been prepared by the author for the use of those engaged in supplying water to the British troops in the field. Brevity has, of course, been a primary consideration in making such a compilation, but, although the author modestly acknowledges incompleteness, every appropriate word or phrase which is likely to be required is given in the three languages. Some useful data and memoranda are included as an appendix.

We have received a copy of "Asphalt and its Uses," a book which should prove of considerable interest to architects, engineers and builders. The primary object of the work is to give examples of the various uses of asphalt and the methods rendering dampproof the many forms of construction in which asphalt is incorporated. The book clearly sets forth the specification applicable to the particular work to be undertaken, with details as to cost. In addition to the twenty examples published, the publication contains sixteen illustrations of buildings in which Messrs. Salter, Edwards & Co., Limited, Hormead Wharf, Hormead-road, W., have carried out the dampproof and asphalt work. Engineers and architects can obtain a copy of the book free on application to the firm mentioned, and will find it an invaluable addition to their libraries.

Royal Institute of British Architects.—The next examination of licentiates desiring to qualify for candidature as Fellows will take place in January next. Applications for admission to the examination must be sent in before the end of December. Full particulars may be obtained on application to the secretary.

*Any of the publications reviewed, or referred to as received, will be forwarded by the St. Bride's Press, Limited, on receipt of published price, plus postage in the case of nett books.

LOCAL GOVERNMENT BOARD INQUIRIES.

The Editor invites the co-operation of surveyor readers [illegible] to enclosing the notices given under this [illegible] and a remedy as possible.

INQUIRIES HELD.

Doncaster R.D.C. [illegible] Mr. A. W. [illegible] the council's reservoir, the agreement being for thirty years, terminable earlier if the council succeeded in [illegible]

Dublin T.C. (November 30th. Mr. P. C. Cowan).—£4,500 for the improvement of the baths and wash-[illegible] been left by the late Mr. D. T. Mulligan for the purposes of the baths, but as the estate could not be safely realised under present conditions, the corporation had determined to borrow the money.

Leicester T.C. (December 4th. Major C. E. [illegible] plained that the work proposed to be done was a further section of the tributary sewerage scheme in Duke-street, James-street, King-street, Marlborough-street, Marquis-street, Mill-street, part of New-walk, and part of Regent-road. The total length of these sewers was 1,108 yds., and the estimated cost £3,097. There was also storm and trade water drainage in Asylum-street, Deacon-street, and a number of other streets, having a total length of 1,940 yds., and estimated to cost £2,174; in addition there was a storm-water sewer in Woodgate, between Fosse-road and Storey-street, 390 yds. in length, and estimated to cost £1,200, and other sewers of a length of 242 yds. in Leadenhall-street and Spitalhouse-street, costing £448.

Mynyddislwyn (Mon.) U.D.C. (December 4th. Mr. W. M. Cross).—£11,351 for the construction of a [illegible] the construction of a road from Cwmfelinfach to Pontgam, through Ynysddu and Gelligroes. It is part of a scheme for a main road through the Sirhowy Valley from Cwmfelinfach to Oakdale, joining with the main road through Cross Keys. Portions of the road have already been constructed. The county council will contribute one-fifth of the cost, and the Road Board have promised a grant of £2,000.

Prescot U.D.C. (December 1st. Mr. A. W. Brightmore).—£2,500 for the construction of a new road and bridge between College-road and Warrington-road.—The deputy clerk, Mr. W. A. Cross, explained that the scheme was part of an agreed arrangement with the adjoining authority, the Whiston Rural District Council, in connection with the recent extension of the Prescot urban district. The surveyor, Mr. R. Norris, gave the details of the road construction and the estimated cost. Mr. H. Kempton Dyson, civil engineer, Westminster, the designer of the bridge, which is in reinforced concrete, attended and fully explained the scheme. The inspector afterwards visited the site, and inspected the bridge work now being carried out.—There was no opposition.

South Shields R.D.C. (December 1st. Major C. E. Norton).—£2,720 for the widening and improvement of North-lane-bank, West Boldon, and £5,659 for the construction of a new road from Hubert-street to North Bridge, Boldon Colliery.—The surveyor, Mr. Roland Clarkson, gave the details, and said there would be a 6-ft. asphalt footpath on each side of North-lane-bank. It was explained, with respect to the proposed new road to Boldon Colliery, that this was part of a larger scheme which the council had in view with the object of making a fresh road from one main road to another main road, and thereby [illegible] access to South Shields.

APPLICATIONS FOR LOANS.

Alnwick U.D.C.—£5,800 for workmen's houses, and £410 for road [illegible].

Belfast R.D.C.—£325 for works of sewerage.

Bournemouth T.C.—£2,300 for the purchase of the Pokesdown technical school.

Brixham U.D.C.—£300 for the purchase of land for a hospital.

Carnarvon T.C.—£1,240 for a new cemetery.

Cheltenham T.C.—£5,500 for paving works.

Chester-le-Street U.D.C.—£8,000 for sewage disposal works.

Colwyn Bay U.D.C.—£28,154 for the purposes of the electricity extensions.

Coventry T.C.—£55,897 for electricity extensions.

Erpingham R.D.C.—£450 for a hospital ward.

Farnham U.D.C.—£15,000 for main drainage works.

Fulham B.C.—£2,433 for road improvement.

Hanwell U.D.C.—£5,000 for the erection of an isolation hospital.

Hendon U.D.C.—£14,222 for works of sewerage.

Oxford T.C.—£30,000 for road works and bridge widening.

Petersfield U.D.C.—£515 for street improvement.

Pontefract T.C.—£21,000 for sewage outfall works.

Ramsgate T.C.—£2,537 for the purchase of property for street improvement.

Salford T.C.—£27,414 for a tuberculosis hospital, and £1,600 for a new reading-room.

Saltburn U.D.C.—£300 for private street works.

South Mimms R.D.C.—£2,750 for the erection of workmen's houses.

Tunbridge Wells T.C.—£500 for sanatorium extension.

Wakefield T.C.—£400 for sewerage works.

Wolstanton U.D.C.—£1,900 for a road improvement.

LOANS SANCTIONED.

Andover T.C.—£250 for works of water supply.

Bury T.C.—£1,493 for sewage disposal works.

Deptford B.C.—£9,084 for street improvements.

Eastbourne T.C.—£3,300 (for eighty years) for the purchase of land as a site for working-class dwellings, and £8,095 (for twenty-two years) for sewers and street works in connection with the scheme.

Ennis R.D.C.—£5,000 in respect of the municipal cottages.

Evesham R.D.C.—£2,500 for the Harvington water scheme.

Hemsworth R.D.C.—£2,590 for sewage disposal works.

Horbury U.D.C.—£4,900 for the provision of a public park.

Isle of Wight R.D.C.—£33,000 for a road improvement scheme.

Islington B.C.—£4,975 for electrical plant.

Kidderminster R.D.C.—£1,500 for works of water supply.

Kingstown (Co. Dublin) U.D.C.—£7,900 for the erection of workmen's houses.

Lichfield R.D.C.—£2,124 for works of sewage disposal.

Luton T.C.—£2,100 for the purchase of land for a recreation ground, and £900 for sewerage work.

Southwark B.C.—£2,518 for the provision of a mortuary.

Stoke Newington B.C.—£1,449 for town hall extensions.

Swansea T.C.—£10,000 for water main extension and sewerage.

Torquay T.C.—£15,860 for the electricity undertaking.

Wakefield T.C.—£560 for sewage disposal works.

PRO PATRIA.

[FOURTEENTH LIST.]

We present herewith the fourteenth list of municipal engineering and sanitary officials who are taking part in the war, and shall be glad to hear of other cases within the knowledge of our readers.

Barlow, A., city surveyor of Ripon, has received a commission in the West Riding Division, Royal Engineers.

Beaumont, R. H., surveyor to the Torpoint Urban District Council, has joined the colours.

Cook, Esmond B., pupil of Mr. S. A. Hill-Willis, ASSOC.M.INST.C.E.I., engineer to the Tilbury Urban District Council, 2nd Lieutenant, 7th Battalion, Royal West Kent Regiment.

Harrison, W. N., assistant, borough engineer's department, Keighley, 2nd Lieutenant, 12th Battalion, West Yorkshire Regiment.

Hole, J., surveyor to the Kingsbridge (Devonshire) Urban District Council, has volunteered for active service.

Jones, E. Clement, surveyor and inspector to the Newtown (Montgomeryshire) Urban District Council, London Sanitary Corps.

Leachman, Henry B., chairman, borough engineer's department, Keighley, gunner, No. 3 Battery, Royal Field Artillery.

Luke, Jas. S., surveying assistant, Cornwall county surveyor's department, R. Monmouth Royal Engineers.

Whisstock, Douglas G., surveyor's assistant, Woodbridge Urban District Council, 6th Battalion, Suffolk Regiment (Cyclists).

In connection with the Hemel Hempstead Town Council there have gone to the Front three sons of the mayor (one killed), one son of the ex-mayor, three sons of the late mayor (one killed), three sons of the council's solicitor (two killed), and several members of the staff, one of whom has been severely wounded.

ASSOCIATION OF MANAGERS OF SEWAGE DISPOSAL WORKS.

ANNUAL GENERAL MEETING IN LONDON.

Dr. Sidney Rideal presided over the annual general meeting of the Association of Managers of Sewage Disposal Works, held on the 1st inst. at the Institution of Civil Engineers, Great George Street, Westminster, London, S.W., when there was a large attendance of members and others.

ANNUAL REPORT.

The annual report of the council, which was presented by Mr. J. H. Abbott, ASSOC.M.INST.C.E., recorded with satisfaction a steady increase in the membership. In addition to the ordinary meetings of the association, the year's proceedings included a visit to the sewage disposal works at Acton, by invitation of the Acton Urban District Council, and a meeting at Leamington, when a paper was read by Mr. Ernest Hopkins, the borough engineer, on "Sewage Disposal Works and Sewage Farms." The council had given considerable attention to the question of the election of members of the council by ballot in the several districts in accordance with the alteration in the rules passed at the last annual meeting. It was hoped that the various districts would thereby be fairly represented, and that the services of the most able members of the association would be secured on the council. The council had decided to [illegible] Advisory Committee for the purpose of giving technical assistance and advice to members. This, it was thought, would be of great assistance, especially in the cases of managers of small works in districts remote from the centres where district meetings took place, and where the managers had few opportunities of attending meetings or coming into contact with other members of the association. The report went on to point out that the financial position of the association remained a strong one, and that the balance-sheet showed that the [illegible] Reference to the resignation of Dr. Charles H. Ball from the post of honorary secretary, the report said it was difficult to express in suitable terms the debt which the association owed to that gentleman for the work he had done for the members, and, in fact, for sewage works managers generally. It was added that in Mr. James B. Crell, who had come forward to fill the vacancy created, the association were fortunate in having found someone with the ability and energy necessary to carry out the onerous duties of the post, and that the council had every confidence that he would prove as successful as his predecessor. Finally, it was mentioned that the list of members showed that at present only thirty-one out of the fifty-two counties in England and Wales were represented in the association, and that nearly 45 per cent of the members belonged to one of three counties; further, that neither Scotland nor Ireland was represented by a single member. The council proposed to circularise all known managers in the counties, and it was hoped that their action would be supported by the efforts of each individual member to enroll as many members as possible.

CONTRIBUTION TO NATIONAL RELIEF FUND.

It was agreed by the meeting that a contribution of £25 should be made to the Prince of Wales' National Relief Fund.

PRESENTATION TO RETIRING HON. SECRETARY.

The chairman said he had next to ask the acceptance by Mr. Ball of an illuminated address placing on record an expression of the members' thanks to the latter for his valuable services as honorary secretary of the association since its formation in 1901, and appreciation of the amiable manner in which those services had always been rendered. The chairman observed that the association had gone on by leaps and bounds. Its success was largely due to the efforts of Mr. Ball, and he was sure that all of them very much regretted that he had been obliged to relinquish the position. Dr. Rideal added that he, personally, owed much to Mr. Ball for the assistance he rendered him during his own year of office.

In acknowledgment Mr. Ball said that, while there was no doubt the duties of the office involved a considerable amount of work, he would be ready to go through it all again if he thought he was to make as many new friends as he had done during the period he had served them as hon. secretary.

The meeting afterwards proceeded to the consideration of a paper by Mr. E. Ardern, M.SC., Manchester, entitled "A Recent Development of the Sewage Problem," which will appear in our next issue.

Municipal Work in Progress and Projected.

The Editor invites the co-operation of SURVEYOR *readers with a view to making information given under this head as complete and accurate as possible.*

[illegible] the more important proposals [illegible] —Dartmouth, Doncaster; refuse disposal—Exeter; [illegible] Glasgow, York; sewerage and sewage disposal—Ellaril, Exeter, Leeds, Pontypridd; [illegible] Evesham, Wolverhampton; [illegible] Local Government Board Inquiries [illegible]

ADMINISTRATION.

Armagh C.C. A resolution has been passed [illegible] the meeting of the county surveyor [illegible] travelling [illegible]

BUILDINGS.

Burry Port U.D.C. Sanction has been received to a loan for the provision of a public slaughter-house, the purchase of Somerset House, and a scheme of water mains extension.

Colwyn Bay U.D.C.—Contracts have been accepted for new electricity works, estimated to cost £28,000, and a refuse destructor estimated to cost £8,000.

Croydon T.C. In order to find work for the unemployed, it has been agreed to spend £285 upon internal cleansing and painting works at depots, and upon the painting of vans and seats.

Dulverton R.D.C. Somerset County Council have offered to pay three-fourths of the cost of rebuilding Brox Bridge, which connects the Dulverton and South Molton main roads, providing the plans were approved by their surveyor. The rural district council have given instructions for the preparation of estimates.

HOUSING AND TOWN PLANNING.

Clydebank T.C. The master of works has received instructions to prepare a ground plan of the sites on which it is proposed to erect workmen's houses.

Dartmouth T.C.—It has been decided to inform the Local Government Board that the council would consider the advisability of formulating a scheme for the erection of workmen's dwellings at an early date.

Diss U.D.C.—Subject to the sanction of the Local Government Board, it has been resolved to adopt a scheme for the erection of fourteen houses in seven pairs, the pair at each end to have four bedrooms each, and the remainder three bedrooms each.

Doncaster T.C.—An intimation has been received that the Local Government Board have sanctioned the corporation's proposal to erect 102 workmen's houses.

Rotherham R.D.C.—A resolution has been passed authorising a further application to the Local Government Board for authority to prepare a further scheme of housing and town planning in the neighbourhood of Laughton and Brampton.

PARKS AND OPEN SPACES.

Barrow T.C. The offer has been accepted of Messrs. Vickers, Limited, to hand over to the corporation a portion of Vickerstown Park, about 8 acres in extent, the conditions being that the corporation maintain it as a public park and pleasure ground, and that they contribute £1,000 for Vickerstown street making.

Sheffield T.C.—The General Purposes and Parks Committee recommend the council to lay out an eighteen-hole golf course at Tinsley Park Wood at an estimated cost of £5,000.

REFUSE COLLECTION AND DISPOSAL.

Exeter T.C. It is announced that it is the intention of the council to provide a refuse destructor.

Sidmouth U.D.C.—It has been decided (since the shaft at the gasworks could not be lengthened) to ask the Local Government Board if they would sanction the erection of the destructor works so as to use the existing shaft.

ROADS AND MATERIALS.

Birkenhead T.C.—Paving work to cost £332 has been agreed to.

Bradford T.C.—The Streets Committee recommend the town council to purchase property and land at Thornton-road and Westholme-street for £10,000, in connection with the scheme for widening Thornton road.

Cannock U.D.C. The council have approved an estimate of the surveyor, Mr. R. Blanchard, at £365, for work of tar-spraying on the main roads.

Crewkerne U.D.C.—It has been resolved to carry out paving works at an estimated cost of £702, and to apply to the county council for a grant in aid of the scheme.

Derry No. 2 (Co. Donegal) R.D.C.—The council have agreed to contribute an additional £240 towards the local road improvement scheme upon the intimation having been received that the Road Board would sanction a grant of £2,000.

Dorking U.D.C. The surveyor, Mr. W. A. Clegg, has completed plans for an improvement scheme in South-street.

Edmonton U.D.C.—It is announced that Government and other grants, amounting to £4,891, will be received for the Silver-street widening scheme, and that of the remaining sum chargeable to the council, £5,282, the county council will contribute a moiety.

Ellesmere Port U.D.C.—In respect of the scheme for the new north road, the council have resolved to apply to the Road Board, through the intermediary of the Cheshire County Council, for a grant of £5,000.

Folkestone T.C.—The borough surveyor, Mr. E. A. Nichols, has prepared a scheme for widening part of Canterbury-road, at an estimated cost of £5,000.

Glasgow T.C.—The corporation are supporting the Dumbartonshire County Council in an application to the Road Board for a grant of £250,000 for the construction of an extension of the Great Western road from Anniesland to Dunbeecher.

Guisborough R.D.C. An estimate of £1,158 has been approved for road construction on the Normanby estate.

Kensington B.C.—The Improvements Committee propose to consult an expert on tree culture with a view to the formulation of some definite scheme of tree planting.

Newcastle-under-Lyme T.C.—It is proposed to purchase property, at a cost of £1,600, for the improvement of High-street.

Penmaenmawr U.D.C.—The surveyor, Mr. R. J. Hughes, has received instructions to take in hand the widening and improvement of the road round the Penmaenmawr Point, known as Pen-y-Clip.

Rotherhithe R.D.C.—The council have asked the county council to apply to the Road Board for a grant in aid of the cost, estimated at £2,450, for making up Mugbet-lane, Maltby.

Shoeburyness U.D.C.—Plans are being prepared for making up Church-road.

Sunbury U.D.C.—Kingston-road and Staines-road are to be resurfaced with tarmac at an estimated cost of £2,767, and the Road Board have sanctioned a grant of £922 in aid of the work.

Uckfield U.D.C.—It has been agreed to carry out the Ridgewood Hill Improvement, at an estimated cost of £847, towards which the county council will contribute £212, and the Road Board a further sum in proportion.

Westminster B.C. Repairs are to be carried out in Bessborough-street, at an estimated cost of £150.

Whitehaven R.D.C.—The council have agreed to support the scheme of the county surveyor for the diversion of the main road at Rowrah, and the construction of a new bridge, at an estimated cost of £6,670.

York T.C.—The tender of Mr. J. W. Pearce, Doncaster, at £22,203, has been accepted for the construction of the tramway track to Hull-road. It has also been agreed to extend the present system from Lendal archway to the railway goods depot, and from the Fulford-road into the Ordnance Stores, at the request of the military authorities.

SEWERAGE AND SEWAGE DISPOSAL.

Bispham U.D.C.—The surveyor, Mr. T. Harrop, has received instructions to prepare a scheme in conjunction with the surveyor to the Fylde Rural District Council, Mr. T. H. Maxwell, for a proposed sewer along Blackpool road to Bispham railway station.

Croydon T.C.—In connection with the £60,000 scheme for road renovation and improvement, it has been decided, upon the advice of the borough engineer, Mr. G. F. Carter, to relay short lengths of defective sewers or surface-water drains, and construct additional manholes, at an estimated cost of £950. The work will probably extend over two or three years.

Elland U.D.C.—Plans are being invited for the contemplated improvement at the sewage disposal works.

Exeter T.C.—The borough surveyor, Mr. T. Moulding, has received instructions to prepare a report upon further sites for sewage works alternative to the sites already proposed.

Leeds T.C.—The tender of Messrs. Harold Arnold & Son, of Leeds, at £141,998, has been accepted for Contract No. 50 in connection with the scheme at Thorpe Stapleton. The proposed works consist of the construction of screening chambers, screen-house, detritus pits, mixing chambers, sewage tanks, storm-water overflow separators, at the outfall of the high-level intercepting sewer, also 18 acres of percolating filters with silt mains, effluent channels, and the laying and jointing of the cast-iron feed supply pipes.

Northampton T.C.—Schemes of drainage and sewerage, estimated to cost £3,750, are recommended by the Highways Committee.

Nottingham T.C.—The council on Monday last passed the scheme for reconstructing the sewer in part of Sherwin-street, at an estimated cost of £2,000.

Pontefract T.C.—The town council have approved a scheme formulated by the Sanitary Committee for the expansion of the sewage works at the east end of the borough according to plans and estimates prepared by Messrs. Balfour & Sons, of Newcastle-on-Tyne. The estimated cost of the scheme is £21,000, and application is to be made to the Local Government Board for a loan.

Prestatyn U.D.C.—Instructions have been given for the preparation of plans, specifications and estimates for a sewerage scheme.

Stratford-on-Avon R.D.C.—The question is under consideration of providing a sewage disposal scheme for Claverdon, at an estimated cost of £3,043.

Warrington R.D.C.—A sewerage scheme, estimated to cost £346, has been approved.

WATER, GAS, AND ELECTRICITY.

Croydon T.C.—The following tenders have been accepted in connection with a duplicate engine and pumps for the new well at Waddon and the supply of cast-iron pipes required to complete the pumping mains for the extension of the Surrey-street mains to Russell-hill reservoir and the new mains from Waddon to Russell-hill—viz., duplicate engine and pumps, Messrs. Ashton, Frost & Co., Blackburn, £5,365; of cast-iron pipes, the Holwell Iron Company, £4,968.

Evesham R.D.C.—The council on Monday last decided to obtain tenders for the Harvington water scheme.

Hackney B.C.—Further additions are to be made to the electricity plant, at an estimated cost of £20,000.

Knaresborough U.D.C.—The council on Monday formally confirmed the decision to apply for a Provisional Order for an electric lighting scheme.

Leeds T.C.—A reorganisation scheme for the Meadow-lane gas-works has been approved, the cost being estimated at about £160,000.

Oystermouth U.D.C.—A decision has been reached to construct a new service reservoir, to instal an additional engine and pump at the waterworks, and to extend the water main, at an estimated cost of £2,800.

Seaton Delaval U.D.C.—It has been decided to extend the water main in order to supply Stickley, North Moor, and Moor Edge.

Wigton R.D.C.—The surveyor, Mr. T. B. Simmons, has prepared plans, which the council have accepted, of water main extensions, estimated to cost £80.

Wolverhampton T.C.—The town council on Monday resolved to promote a Bill to construct additional waterworks, comprising the Ivetsy pumping station, in the parish of Lapley and Wheaton Aston, in the rural district of Cannock, a service reservoir in the parish of Brewood, in the same district, and aqueducts, mains, pipes and other works, and to extend the limits of the corporation for the supply of water so as to include the parishes of Brewood, Featherstone, Hilton, Lapley and Wheaton Aston, Saredon, Shareshill and Stretton, in the rural district of Cannock, in the county of Stafford, the parishes of Blymhill and Weston-under-Lizard, in the county of Stafford, and the parishes of Boscobel and Tong, in the rural district of Shifnal, in the county of Salop.

MISCELLANEOUS.

Greenwich B.C.—It has been agreed to address a communication to the Home Secretary and the Commissioner of Police in support of a regulation requiring that all motor vehicles licensed by the police shall have a sufficient guard effectively to protect foot-passengers being splashed with mud.

Hampton Wick U.D.C.—The surveyor, Mr. P. Taylor, has been authorised to purchase eighteen shovels and twelve picks, and to lend one dozen of each to the 8th Battalion Middlesex Regiment, who require 500 of each tool for training, in return for £22 5s.

PERSONAL.

Mr. F. A. Barnes, borough surveyor of Truro, has had his salary increased by £25 to £250 a year.

Mr. Edward Glover, late county surveyor of Kildare, has been granted a retiring allowance of £352 a year.

Mr. E. F. Rolfe, of Cheveley, Newmarket, has been appointed clerk of works under the West Suffolk County Council.

Mr. T. B. Simmons, surveyor and inspector to the Wigton Rural District Council, has had his salary increased by £10 a year.

Mr. W. E. Wollam, surveyor and inspector to the East Grinstead Urban District Council, was on Monday last voted an increase of salary of £50 per annum.

Mr. M. Moynihan, of the city engineer's department, Dublin, is recommended by the Committee of Chairmen and Vice-chairmen for appointment to the office of assistant borough surveyor.

Major A. C. H. Kennard, one of the London County Council representatives on the Traffic Board, having offered himself for active service, the council have appointed Mr. William Haydon in his place.

Mr. H. Knight, assistant surveyor to the Brentford Urban District Council, who has been congratulated by that authority upon passing the associated membership examination of the Institution of Civil Engineers, has had his salary increased to £175.

Mr. Edgar F. Willson, Kingsbridge, Devon, who was appointed surveyor for the Eastern district of the Docking Rural District Council, has declined the appointment as he has received promises of better prospects in his present position.

Mr. Owen Geoffrey Stanley, engineer and surveyor to the Windlesham Urban District Council, Surrey, has been successful in passing the associate membership examination of the Institution of Civil Engineers. Mr. Stanley is now serving as lieutenant in the Army Service Corps, having been transferred from the Oxfordshire and Buckinghamshire Light Infantry, to which he was first gazetted.

Sir George Gibb, chairman of the Road Board, has been temporarily appointed an additional civilian member of the Army Council. He will be charged with the supervision of Army contracts. Arrangements are being made for the temporary performance of Sir George Gibb's duties at the Road Board. Sir George is an Aberdeen man, born in 1850. He was general manager of the North-Eastern Railway from 1891 to 1906. He has also acted as chairman of the Metropolitan District Railway Company. He was a member of the Committee on War Office Reorganisation in 1901. A solicitor by profession, he is a LL.B. of London University. In 1904 a knighthood was conferred upon him.

Mr. E. B. Martin, borough engineer and surveyor of Rotherham, has been appointed the new borough

[illegible] that the selection was finally made. Mr. Martin served his articles under Mr. E. J. Silcock, borough and waterworks engineer of King's Lynn, where he was largely engaged on port and harbour work, and [illegible] Rotherham in 1907. Previous to that he had had extensive experience of municipal work in the city [illegible]. He is a member of the Institution of Civil Engineers, the Institution of Municipal and County Engineers, and the Institution of Water Engineers.

Mr. A. B. McDonald, city engineer of Glasgow, has [illegible] Mr. McDonald, who will retain his position until May 31st next, will [illegible] per cent of his present salary. His service under the Glasgow Corporation dates back to 1870, his appointment as city engineer being made in 1890. With the late Mr. John Carrick, the former master of works [illegible] the Glasgow city improvement scheme, which involved a total expenditure of about £1,750,000. He was also the engineer of the Glasgow main drainage scheme, the second largest in the world, costing £2,250,000. Mr. McDonald was president of the Scottish branch of the Incorporated Association of Municipal and County Engineers, and after its amalgamation with the [illegible] He is a member of the Institution of Civil Engineers.

Conceiving anything, or nothing.

WASSINGER. "The Fatal Dowry." Act II., 2

DEADWOOD AS A CAUSE OF DRY ROT.

To the Editor of The Surveyor.

SIR,—Every engineer will be interested in the statements made by Mr. E. J. Goodacre at the meeting of the Institution of Municipal and County Engineers at Birmingham the other day.

In the discussion which followed there was considerable interest taken as to the cause of dry rot, and it is not at all surprising to me that this anxiety should pertain in the Midland district, because it is into that district that deadwood is imported.

[illegible] interest the public of this country against the importation of diseased timber, and for six years I have made a hobby of the study of this evil.

When dead timber is used in a building where ventilation is poor it develops fungoid growths which ultimately rot it and transform it into touchwood. The great danger of deadwood lies in the fact that it is exceedingly difficult to detect, so that it is often used by builders in ignorance of its real nature. A builder said to me some time ago that a stack of timber he had just got in was the best he had ever had, because not only was it free from knots, but [illegible] He said [illegible] emphatic knowledge of this wood that could convince him that he was using deadwood. Indeed, it is not to be wondered at that many builders are entirely ignorant of this inferior wood. Apart from the question of the reddish hue, there is nothing but the light weight of the wood to distinguish it from good timber.

Deadwood was first exported to England in small quantities in 1885, and ever since has found a rapidly growing market here. No attempt is made to delude buyers. The English importer buys it as Torrak.

The Swedes never use this wood themselves. It is practically unknown in France and Germany.

It cannot even be used for packing-cases for long voyages, because in the close hold of a ship the fungus is spread with startling rapidity.

[illegible] market.

For these reasons I assert and maintain strongly that an Act of Parliament should be passed prohibiting [illegible]

J. H. KAY, [illegible]

King's Lynn.
December 8, 1914.

APPOINTMENTS VACANT.

— Stanford, Lingfield	98
Head Brothers, Lingfield	91
May, Mortimer & Co., Catford	91
Cooper, Warlingham	65
— Sanderson, Bordon, Hants	60

Surveyor's estimate, £91.

HARTLEPOOL.—Accepted for the supply of stores for the ensuing year, for the corporation:

Bass Brooms and Ironmongery.—W. Oliver, Hartlepool.
Iron Castings.—J. Meredith, West Hartlepool.
Smiths' Work.—Divided between Messrs. Dalkin, Booth, and Nelson.
Oils and Disinfectants.—Denton Brothers and Oliver.
Portland Cement.—Messrs. Trechmann.
Building Lime.—F. W. Dobson, Darlington.
Stoneware Pipes.—T. H. Bradley, West Hartlepool.
Whinstone.—Messrs. Summerson, Cockfield.
Slag.—W. H. Musgrave, Middlesbrough.

PRESTWICH. For private street works for the urban district council. Mr. S. B. Morgan, surveyor:—
H. W. Williams, Prestwich, Lancs.

TORQUAY. For laying 3,700 yds. and 6,130 yds. respectively of 15-in. and 18-in. earthenware pipes, for the construction of a sewer in Torquay, under the Torquay Corporation Sewerage Scheme, Contract No. 1:—
J. Dobie (Plymouth), £1,417.
Contract No. 2:—Holloway Brothers (London), Limited, Exeter, £2,112.

WANSTEAD. For the erection of a caretaker's cottage and mortuary at 30, Avenue, for the urban district council. Mr. C. H. Bessant, surveyor:—

A. J. Dunn, Walthamstow	£ 200
A. J. Cosmus, Stratford	199
Clemens Brothers, East Ham	195
Woodhatcher & Co., Limehouse	185
W. S. Simpson, Bow	182
Coggins Brothers, East Ham	180
G. A. Wills, Forest Gate	175
A. W. Reeve, Wanstead	169
F. S. Russell, Leytonstone	110

WHITLEY AND MONKSEATON. For the construction of carriageway foundations, for the urban district council. Mr. A. J. Russell, surveyor:—
M. D. Young, Whitley Bay, at schedule prices.

MEETINGS.

Secretaries and others will oblige by sending early notice of dates of forthcoming meetings.

DECEMBER

11-12.—Institution of Water Engineers. Winter General Meeting in London.

14.—Junior Institution of Engineers. Marquis of Graham delivers his Presidential Address. Institution of Electrical Engineers. 8 p.m.

15.—Institution of Civil Engineers: Discussion of paper: "Concreting in Freezing Weather and the Effect of Frost upon Concrete." 8 p.m.

APPOINTMENTS OPEN.

OFFICIAL AND SIMILAR ADVERTISEMENTS RECEIVED UP TO 4.30 P.M. ON THURSDAYS WILL BE INSERTED IN THE FOLLOWING DAY'S ISSUE, *but those responsible for their despatch are recommended to arrange that they shall reach* THE SURVEYOR *office by noon on* WEDNESDAYS *to ensure their inclusion in the weekly list of summaries. Such advertisements may, in cases of emergency only, be telephoned (City No. 1046) subject to later confirmation by letter.*

BOROUGH OF MANSFIELD.
TEMPORARY ENGINEERING ASSISTANT.

Applications are invited for the appointment of a Temporary Assistant in the Borough Surveyor's Office at a salary of £3 per week. Applicants must be good Draughtsmen, accurate Surveyors and Levellers, and have had previous experience in a Borough Surveyor's Office.

Applications, stating age and experience, accompanied by copies of three recent testimonials, and endorsed "Engineering Assistant," to be addressed to the undersigned not later than Thursday, the 24th of December, 1914.

T. P. COLLINGE, ASSOC.M.INST.C.E.
Borough Engineer and Surveyor.

Mansfield.
December 8, 1914. (2,158)

PORT-OF-SPAIN CITY COUNCIL.

The Council invite applications for the combined posts of City Engineer and Engineer of the Port-of-Spain Water and Sewerage Works.

2. The salary attached to the post of City Engineer is £400 a year, and to that of Engineer of Water and Sewerage Works, £550 a year, with travelling allowance at the rate of £75 a year.

3. The intention of the Council being that the two posts of "City Engineer" and "Engineer of Water and Sewerage Works" should be held by the same person, every application must be for the two posts combined.

4. The offices are pensionable under the Port-of-Spain Corporation Ordinance, 1914.

5. The appointment, so far as concerns the post of Engineer of Water and Sewerage Works, is subject to the approval of the Governor.

6. Candidates must be corporate members of the Institution of Civil Engineers of England, and must possess experience in the design, construction, and maintenance of waterworks and sewerage systems.

7. Applications, accompanied by not less than three recent testimonials, and stating age and previous experience, must be supported by satisfactory evidence that the candidates possess the qualifications set forth in the preceding paragraph of this notice, and must be forwarded so as *to reach the undersigned not later than the 31st January, 1915.*

8. Candidates must also forward with their applications a medical certificate of fitness for service in the West Indies.

9. The successful candidate will be required to furnish a bond with an approved surety in the sum of £500 for the due performance of the duties of the above offices. He will be required to devote his whole time to the service of the Corporation, and to reside in the City of Port-of-Spain, or within one mile of the limits thereof; and he must be prepared to enter upon the duties of the appointment within one month from the date of the receipt by him of the official notice of his appointment.

JOSEPH ARNOLD LAMY,
Town Clerk.

Town Hall,
Port-of-Spain,
Trinidad, B.W.I. (2,128)

COUNTY BOROUGH OF STOKE-ON-TRENT.
BOROUGH SURVEYOR'S DEPARTMENT.

The Corporation invite applications for the appointment of a Junior Assistant in the Borough Surveyor's Office, at a salary of £75, rising, in the discretion of the Council, to £95 per annum.

Applicants must be neat and expeditious Draughtsmen, and accurate Surveyors and Levellers.

Preference will be given to candidates who have had experience in a Borough Surveyor's Office.

Applications, stating age and experience, accompanied by not more than three recent testimonials, and endorsed "Junior Assistant," must be sent to me not later than Thursday, 17th of December, 1914.

Canvassing, directly or indirectly, will be a disqualification.

A. BURTON, ASSOC.M.INST.C.E., F.S.I.
Borough Surveyor.

Town Hall,
Stoke-on-Trent.
November 27, 1914. (2,127)

CUMBERLAND COUNTY COUNCIL.
HIGHWAYS DEPARTMENT.

Applications are invited for the appointment of a Temporary Assistant, for at least three months, in the County Surveyor's Department. Applicants must be good draughtsmen, with a thorough knowledge of Surveying, Levelling, and the general work of a Surveyor's Department. Salary, £2 per week.

Applications, stating age and experience, together with copies of two recent testimonials, and stating the earliest date on which applicant can take up his duties if appointed, to be received not later than Saturday, the 19th of December, 1914.

WILLIAM FINCH,
County Surveyor.

The Courts,
Carlisle.
December 8, 1914. (2,159)

TENDERS WANTED.

TENDERS FOR GOVERNMENT PRINTING.

Tenders are invited for the Contract for a period of about 21 and 14 years, for the supply of Printing, Printing Paper and Binding required by the Government Departments. These Contracts are confined to London printers.

Tenders for the first of the Contracts are required to be delivered not later than 12 o'clock noon on Wednesday, the 16th December, 1914.

Forms of Tender and Specifications may be obtained at the Office of H.M. Stationery Office, Princes-street, Westminster, S.W. (2,154)

DERBYSHIRE COUNTY COUNCIL.

TENDERS FOR ROAD MATERIALS.

Tenders are invited by the Surveyor for the Stone required for the Maintenance of the Main Roads, viz.:—

Granite,
Basalt,
Slag,
Limestone,
Tarred Macadam,
Tarred Chippings,

or other suitable Materials, delivered at various Railway Stations and Wharves in the County during the year ending 31st March, 1916.

Form of Tender and Conditions of Contract may be inspected at my Office, and can be obtained thereat free of charge on application, or by letter enclosing a large foolscap envelope.

Each Tender must be sent in a Special Form, for which application must be made.

Tenders are to be delivered to me not later than Thursday, December 31st, 1914.

The lowest or any Tender will not necessarily be accepted, and the Committee reserve the right to accept the whole or any part of a Tender.

J. W. HORTON, ASSOC. M. INST. C.E.,
County Surveyor.

County Offices,
St. Mary's Gate, Derby.
December, 1914. (2,153)

The Council will not necessarily accept any Tender.

Tenders should reach me not later than January 20, 1915, marked "Steam Roller."

FRANCIS S. WHITE,
Clerk to the Council.

[illegible]
East Grinstead. 2,147

TEDDINGTON URBAN DISTRICT COUNCIL.
SEWAGE DISPOSAL WORKS.

The Council are prepared to receive Tenders for the Construction of Tanks, Channels, Filters, and other Works required in the extension of their Sewage Disposal Works, Broom-road, Teddington.

The Drawings and Specifications may be inspected at the Office of Mr. William Fairley, Consulting Engineer, Parliament Mansions, Westminster; also at the Office of Mr. Marshall Hainsworth, Surveyor, Public Offices, Teddington.

Copy of the Bill of Quantities may be obtained on deposit of crossed cheque for £5, made payable to the Council, which deposit will be returned on receipt of a *bonâ-fide* Tender.

Sealed Tenders are to be delivered to the undersigned by noon on the 21st day of December, 1914.

The Council do not bind themselves to accept the lowest or any Tenders.

(By order)
G. H. SALMONS,
Clerk to the Council.

Public Offices, Teddington
November 30, 1914. (2,138)

SURREY COUNTY COUNCIL.
SCHOOL CLINICS AND DISPENSARIES.

The Education and Public Health and Housing Committees of the Surrey County Council invite Tenders for the Provision and Erection of permanent Buildings of Light Construction for School Clinics and Tuberculosis Dispensaries.

Particulars and Specifications may be obtained from, and Plans may be seen at, the Surveyor's Department, County Education Offices, Penrhyn-road, Kingston-upon-Thames, between the hours of 10 a.m. and 4 p.m. on week-days, except Saturdays.

Tenders should be addressed to the Surveyor at the above address, and must be delivered on or before 31st December, 1914.

T. W. WEEDING,
Clerk of the Council.
W. W. FINNY,
Secretary of the
(2,152) Education Committee.

SOMERSET COUNTY COUNCIL.
SURFACE TARRING ON MAIN ROADS.

Tenders are invited for Surface Tarring on Main Roads [illegible] during the year 1915.

[illegible] and Urban District Councils, and probably about 160 miles of Roads will be so treated.

Forms of Tender, General Conditions, and Specifications may be obtained from the undersigned, to whom Tenders, endorsed "Surface Tarring," must be delivered not later than Thursday, the 31st December, 1914.

The lowest or any Tender will not necessarily be accepted.

EDWARD STEAD, [illegible]
County Surveyor.

County Surveyor's Office,
Wells.
December 8, 1914. (2,155)

DARLASTON URBAN DISTRICT COUNCIL.
SEWERAGE AND SEWAGE DISPOSAL WORKS.
CONTRACT No. 1.

The Urban District Council of Darlaston are prepared to receive Tenders from Contractors for the construction of Stoneware Pipe Sewers, Manholes, Cast-iron Pipes, Tanks, Filters, together with other works.

Plans and Sections of the proposed Works may be seen, and Specification, Bill of Quantities, Form of Tender and other particulars obtained from the Engineers, on application to Messrs. Dodd & Dodd, MM.INST.C.E., County Chambers, Corporation-street, Birmingham, on and after the 14th day of December, 1914, on payment of a deposit of £5 (note only), which will only be returned on receipt of a *bonâ-fide* Tender and the return of all documents.

Sealed Tenders, endorsed "Tender for Contract No. 1," are to be delivered at my office at Darlaston not later than 12 o'clock noon on the 21st day of January, 1915.

The Council do not bind themselves to accept the lowest or any Tender.

(By order)
JOSEPH CORBETT,
Clerk.

Town Hall,
Darlaston. (2,157)

FOR those wishing to bring their Appliances and Materials directly to the notice of Municipal Engineers, Contractors and others concerned in Local Government Constructional Work there is no medium so effective as THE SURVEYOR AND MUNICIPAL AND COUNTY ENGINEER. Vol. XLVI. DECEMBER 18, 1914. No. 1,196.

Minutes of Proceedings.

Municipal Water Supply.—(2). In our comments last week upon the lecture on "The Provision of a Municipal Water Service," recently delivered by Mr. Lewis Mitchell, M.INST.C.E., the borough waterworks engineer of Bolton, we concluded with a reference to the absence of any liability to provide compensation water in the case of underground supplies. Our readers will probably be aware that the dissatisfaction which exists in regard to the present state of the law on this matter found utterance in 1912 by the introduction into the House of Lords of a Bill bearing the somewhat inappropriate title of the "Water Supplies (Protection)" Bill, the object of which was to impose certain restrictions upon the powers of authorised undertakers, including municipal corporations. One of the provisions of this Bill aimed at rendering water authorities liable to give compensation for injury to private supplies derived from underground water not flowing in any defined channel. The Joint Committee to which the Bill was referred pointed out that this provision would be unequal in its operation, inasmuch as the right of private parties, such as collieries, breweries, railway companies and others to injure private supplies without any liability to make compensation remained untouched. The Bill also raised the larger question of the control of the sources of supply, in regard to which the committee reported in favour of the creation of an organisation empowered to inquire into the whole question of surface and underground water supplies from a comprehensive standpoint, to supervise the allocation of supplies, and to serve as an authoritative adviser to Parliament in the consideration of particular schemes.

Mr. Mitchell deals at some length with the necessary steps, both Parliamentary and engineering, which must be taken to secure a supply from impounding reservoirs. It is here that the greatest engineering knowledge and skill are called into play in the selection of a suitable drainage area, the determination of the available yield, the selection of sites for storage reservoirs, and the design of works. In the selection of the site for a reservoir there are three principal considerations—the elevation, which should be such as to secure a supply by gravitation to every desired point; the configuration of the ground, so that as far as practicable a large basin can be enclosed by embanking across a narrow, impervious defile or gorge; and the foundations. The last point is a very important one, and Mr. Mitchell cites several instances where considerably increased expense was incurred owing to the excavations disclosing a foundation entirely different from that which had been expected. The last part of the lecture deals with the problems of distribution. The legal obligation of a water authority is ordinarily limited to providing a supply for domestic purposes, the charge for which is proportioned to the rateable value of the particular premises. Trade supplies are, however, commonly provided by agreement, a charge being made by measure. In this connection difficult questions have arisen from time to time as to the exact meaning of the expressions "domestic purposes" and "trade purposes." Where, as in the case of a restaurant, the ultimate user of the water is of a domestic character—*i.e.*, for the purposes of consumption or the washing of utensils—although the user takes place in the course of carrying on a trade or business, the charge to be made depends upon the legal status of the supply.

In the most recent case on the subject—*Oddenino v. the Metropolitan Water Board*—it was held that the true test is not the character of the user, but the character of the premises, and that it makes no difference even if the whole of the user is domestic in character, if any part of the premises is used for the purpose of a trade or business. This confusion has led to a suggestion in certain quarters that all water supplies, whether trade or domestic, should be paid for by measure. To this simple solution, however, there are two objections. In the first place it would appear to be contrary to the public interest to adopt any method of payment which would or might tend to undue economy in the use of such a necessity of life and health as water. Then again the capital cost of a meter installation would be prohibitive, apart from the considerable annual charges for inspection, repairs and renewals. On the whole, we think the present arrangement fairly satisfactory, in spite of the fact that from time to time it provides opportunities for the lawyers to exercise their ingenuity.

* * *

Sewage Treatment by Aëration. Although it was so recently as last week that this subject was discussed in these columns in connection with a paper by Mr. W. H. Duckworth, F.C.S., we feel that no apology is needed for reverting to this important development in the art of sewage disposal, which was further dealt with in an interesting paper read by Mr. Edward Ardern, M.SC., last week at the annual general meeting of the Association of Managers of Sewage Disposal Works. In all these recent experiments, the valuable aid of

"activated" sludge in the process of oxidation is thus demonstrated and the necessity for maintaining continuously a thorough intimacy of this sludge with the sewage under treatment is the chief difference between these latest methods of aëration and those earlier experiments, in which the sewage simply flowed through the humid sewage matters aërated by the sludge. In the course of some comments from an earlier paper by the present writer on the Massachusetts experiments, Mr. W. E. Bassett [illegible] the fact that the reduction of the nitrogen is carried on by the direct aid of the Massachusetts State Board of Health, the idea of surface contact is retained by the use of slabs of slate placed vertically 1 in. apart in the tank in which the sewage was aërated. This is quite correct, but in the most recently published record of the work done in 1913 by Messrs. H. W. Clark and S. De M. Gage it is pointed out that the reduction in nitrogen during the part of August after the gelatinous film had been re-established was *more than* as great as in July, when the slate surfaces were comparatively clean. The use of the slate slabs thus appeared to play the same *rôle* in the Massachusetts experiments as the mixing of the activated sludge with the sewage in the Manchester experiments. In both cases it is evident that an essential feature of the process is the close contact of the sewage under treatment with the *nidus* of the bacteria: in the one case it is the "activated" sludge, in the other the gelatinous film on the slate slabs. This reminds us of the "absorption" theory of Dr. Dunbar, and we are inclined to agree with Mr. Lowcock's remarks in the course of the discussion upon Mr. Anderson's paper to the effect that "it did not make any difference, as far as principle went, whether they treated the sewage in the presence of what was really activated sludge on the grains of the filter, or blew air through the sewage." As far as we can see, the chief difference is that, while a filter may, and frequently does, become choked, and the amount of air supplied to the sewage is limited to the volume which is drawn into the filter by natural processes, there is nothing to become clogged in an aërating tank, and, further, the amount of air can be increased to any extent, and the maximum quantity that can be efficiently utilised may be supplied to the sewage at all times.

There is another point on which we agree with Mr. Lowcock. "To his mind the whole question was as to cost." We have said this before on more than one occasion. In his paper, Mr. Anderson stated that it was impossible at present to make a definite statement, but in replying to the discussion he said that "in their experiments they had not used more than 15 cub. ft. of free air per square foot of tank area per hour. That was something definite, and would enable them to form some approximate calculation as to the cost." To our mind this is not "something definite," as the area of the tank will depend upon its size, which again will depend upon its depth, and this factor is not given. The Massachusetts investigators, however, do give some definite figures. In their latest publication it is stated that, with a working depth of 5 ft. of sewage, and assuming electric power at 2d. per kilowatt, it would cost about 7s. 8d. to treat 1,000,000 gallons of sewage for five hours with 25,000 cub. ft. of air per hour. This, again, must not be taken as the whole cost of the disposal of the sewage, and the next step should be for some engineers to take a hand in the work. There is no need for any further experiments to demonstrate the principle of the process; what we require is that it should be put into practice on a sufficiently large scale to allow of definite calculations being made as to the cost of operation.

The Subsoil of Highways.

It is, of course, well known that a landowner who lays out a road and dedicates it as a public highway does not thereby part with his property in the soil. On the contrary he is still entitled to make any use of it which is not inconsistent with the public right of passage; he may prevent its being used for any purpose or in any manner not just fixed by the public easement; he can tunnel under it (so long as he does not interfere with the superstructure); he can prevent pipes being laid in it (except under statutory powers), and as a general rule trees and herbage growing on the road belong to him. As regards streets repairable by the inhabitants at large in urban districts, however, these rights are somewhat curtailed, such streets being vested in the urban district council by sec. 149 of the Public Health Act, 1875. We say "curtailed" (not "extinguished") advisedly, because it has been decided that this enactment does not transfer the whole of the subsoil to the council, but only "the surface, and such right below the surface as is essential to the maintenance, occupation and exclusive possession of the street and the making and maintaining it for the use of the public" (*Rolls v. Vestry of St. George the Martyr*, 14 Ch.D., 796).

The consequences of this judicial, though perhaps not very precise, restriction of the meaning of the term "vest" are rather curious. The owner of the subsoil still retains the right of tunnelling, though presumably below the not very definite line at which the urban authority's rights terminate. And while the authority can prevent pipes and wires being laid in the street without their consent, in the event of this being done before they can interfere, the authority cannot compel their removal, though they can forbid the street being opened for their repair. Again, the authority cannot authorise private persons to lay pipes in the street for trade purposes, even though laid no more than 18 in. below the surface in the macadam or made-up ground. This was decided in the case of *The Salt Union, Limited*, v. *Harvey* (61 J.P., 375), which is rather an interesting case and had reference to a street in the borough of Droitwich. The defendants (having first obtained a licence from the Droitwich Corporation) laid pipes in the street (at the specified depth) for carrying brine from their pits to their works. The plaintiffs, who were the owners of the soil of the street (subject to the statutory rights of the corporation), obtained an injunction restraining the defendants from maintaining the pipes in the street, or, in plain English, an order to remove them. Further, except in districts where sec. 47 of the Public Health Acts Amendment Act, 1907, is in force, the urban authority are precluded from constructing lavatories under a street, as was held in the well-known Tunbridge Wells case (*Baird* v. *Tunbridge Wells Corporation*, 1891, 2 Q.B., 867), although the corporation were empowered by a local Act to erect such conveniences "in" any street. Now, however, in districts where the above-mentioned section of the Public Health Acts Amendment Act, 1907, is in force, the local authority are expressly authorised to provide and maintain sanitary conveniences and lavatories in or under any street repairable by the inhabitants at large. But the learned editors of "Lumley's Public Health Acts" point out, in their notes to this section, that it does not vest the subsoil in the authority for the purpose of the provision of such conveniences (as does the Public Health, London, Act, 1891), and that consequently the Tunbridge Wells case seems to show that the authority must, if required, pay for the use of the subsoil. On a future occasion we hope to refer to the question of the relative rights of the

local authority and the landowner in the aerial zone above the highway.

* * *

Institution of Water Engineers.

The nineteenth winter general meeting of the Institution of Water Engineers, which was held at Burlington House last week under the chairmanship of the president, Mr. Thomas Molyneux, was a very successful function. During the business proceedings resolutions were adopted for subscribing from the accumulated fund of the institution a sum of 50 guineas to the Prince of Wales's Fund, and a sum of 20 guineas to the funds of the Red Cross Society—an excellent lead which may well be followed by other professional societies. Afterwards the members settled down to the discussion of a valuable paper entitled "Notes on Scraping a 15 in. Trunk Main at Barlow," presented by Mr. J. C. Barrowclough, the water works engineer of that town. This work was undertaken owing to a gradual diminution in the discharge of the main from its theoretical capacity of 1,680,000 gallons a day to an actual yield of but 1,092,936 gallons per day in 1911. In the early part of 1912 a trial length of 2,600 yds. was dealt with by means of the "Eric" patent scraper, and the result was so satisfactory that the Water Committee at once gave instructions to proceed with the whole main—some 17 miles in length. So thorough were the preparations for the work, that the whole was accomplished without mishap, with the exception of one or two stoppages due to circumstances which could not have been foreseen. It is interesting to observe that among the miscellaneous matters removed by the scraper were two pick shafts and a crowbar, in addition to about 22 tons of incrustation per mile. The immediate result of the work was to increase the delivery of the main by 434,526 gallons a day. Mr. Barrowclough concluded his paper by stating some general principles gleaned from his experience of the work. First among them was that before work of this kind is commenced the main should be carefully surveyed and all possible information obtained as to the position of any valves or special castings. The importance of this is again emphasised in the author's conclusion that the degree of success attained will materially depend upon the care devoted to the preparations made in advance and a full appreciation of the difficulties likely to be met with. The paper produced a discussion that was at once lengthy, interesting and profitable. As will be seen from our report of the gathering, Mr. F. W. McCullough, the water engineer of Belfast, was elected president of the institution for 1915-16. The summer meeting will accordingly take place in that city, and it is evident from the remarks which Mr. McCullough made in returning thanks for the honour bestowed on him that a cordial welcome will be extended to those who decide to be present on the occasion of his formal installation.

Bognor Council and Insanitary Property.

The Sanitary Committee of Bognor are undoubtedly doing the proper thing in carrying out with vigilance and energy the provisions of the Housing and Town Planning Act. Bognor is a popular seaside resort which, like the majority of old towns of a similar kind, contains certain antiquated and unwholesome specimens of house property, and it is only natural, in the interests alike of the town as well as its inhabitants and visitors, that the urban council should have an eye to the improvement of the local housing conditions. Recently a report was submitted with respect to sixteen dwelling-houses, and it appearing to the Sanitary Committee that these dwellings were in a state so dangerous or injurious to health as to be unfit for human habitation, it was decided to make orders prohibiting the use of the houses until they were rendered habitable. When this decision was announced at the council meeting there was an outburst of what may be termed the customary indignation at the alleged harshness of the manner of enforcing the law. This was duly mingled with expressions of sympathy for the unfortunate tenants who would be disturbed, and an appeal to suspend some of the orders "for a little while." On the question of the suggestion for delay it was pointed out by the clerk that every consideration had been given to the owners of the various properties. Some were given notice as long ago as last February, and none later than March. This, of course, proved the sheer futility of paying any heed to appeals, *ad misericordiam*, on behalf of the owners of slum property, but it also afforded, by way of sidelight, an idea of the plight of the long-suffering tenants. What this is in actuality was elicited by the statement of the chairman of the Sanitary Committee that "some of the houses inspected were like pigsties and hovels, and made the members of the committee who went inside them feel ill." Even this failed to convince the opposition of the necessity for the action it was proposed to take, and in the circumstances it was a satisfaction to feel that the law would take its course, for the clerk pointed out that the Sanitary Committee had executive powers in the matter, and no amendment to the report could be moved until these powers had been revoked.

* * *

The Concrete Institute.

Among the more ordinary problems which confront the structural engineer, few, if any, are of greater importance than those which concern the economical design of beams and girders. The case of members composed of a simple material does not present any very great difficulty, but in the case of a compound material like reinforced concrete new factors are at once introduced. The design in even the simplest cases may be varied to an extraordinary degree either by different modes of arranging the reinforcement or by altering its amount, but in every structure one of the most important considerations is the amount and incidence of the shearing stress which will be set up when it is placed in position. An interesting paper dealing with this aspect of the design of reinforced concrete structures was read at the last meeting of the Concrete Institute by Mr. H. Kempton Dyson, the able secretary of that body. In emphasising the essential differences between the steel or cast-iron girder and the reinforced concrete beam, Mr. Dyson pointed out that the latter is peculiar in that stresses are induced in it in different ways as the quantity or arrangement of the reinforcement is varied. As regards the effect of shear, it was early found in practical work that it was advantageous to reinforce beams against this stress in other ways than by trussing members, and web members were consequently introduced, either alone or in combination with the vertical reinforcements. These web members can in many cases be economically provided by merely turning up the main bars. It must always be remembered that any purely mathematical or theoretical analysis of the stresses in a structure of any kind is largely speculative. In practical work their chief value is to draw the attention of the engineer to the theoretical possibilities of his design. With this knowledge, his experience will enable him to make practical allowances, and in many cases to use simplified calculations which will produce safely approximate results.

The Provision of a Municipal Water Service.*—(2).

By LEWIS MITCHELL, M.Inst.C.E., F.G.S., Waterworks Engineer, Bolton

[illegible] seems to be that, for the general run of people, the matter is relatively unimportant. For example, a [illegible] the evidence submitted to them it was proved that in the British Islands the tallest and most stalwart men were to be found in Cumberland and the Scotch Islands, where the water used is almost invariably very soft. On the other hand, a French Commission appointed to consider the same question reported that the evidence received tended to prove that in hard-water districts the inhabitants had a better physique than those in the soft-water districts, and a Vienna Commission reported in favour of a moderately hard water for a similar reason. By some persons it is considered more palatable, and after they have become accustomed to the use of hard water they would make objection to the introduction of a soft water. Recently Nottingham and Derby, which have been accustomed to water of 10 deg. and 12 deg. of hardness respectively, have strongly resented the supply of comparatively soft water brought from the Derwent Valley, and there is every likelihood that when Birkenhead (which at present gets by pumping from the new red sandstone its water, which is bright and clear, and has a total hardness of 10 deg.) will also object to the soft and brown-tinted water from the river Alwyn, in Mid Wales, whence it will shortly be imported. But, while regard must be had to this quality, it is obviously not always practicable to obtain for a district a supply of soft or hard water according to whichever degree is desired, owing to the cost involved.

Another important consideration in regard to the quality of the water is that it should at its source be free from risk of serious contamination. Absolutely pure water is seldom found in a natural state. In descending as rain from the clouds, it carries down impurities from the air through which it passes. In flowing over or penetrating the surface of the ground it absorbs mineral, vegetable and animal matters. An ideal potable water may be defined as one that is odourless, tasteless, clear, transparent, and free from pathogenic—*i.e.*, disease-producing—organisms. A water which might, however, to the senses of taste, smell and sight, and even from a chemical point of view, be desirable, might, nevertheless, be so grossly polluted with disease-producing germs as to be totally unfit for domestic use. The wholesomeness of water cannot be determined by its appearance; bright, sparkling water may owe its seductive appearance and pleasant taste to sewage contamination, while each drop may contain myriads of fatal organisms. Upwards of 200 varieties of living micro-organisms have been found in water. Many are so minute as to require the highest powers of modern microscopes for their detection; indeed, a cubic centimetre—*i.e.*, a teaspoonful, or seventeen drops—of unfiltered Bolton water contains, on an average, 350 bacteria, and in one sample taken last month the number of organisms found in one cubic centimetre was no fewer than 10,000. Though their identification is often a matter of difficulty, many of them are well-known pathogenic bacteria, including the bacilli of typhoid, cholera, tetanus, anthrax, and of tubercle. Pathogenic bacteria have their origin in the bodies of human beings or animals suffering from disease, and some of them maintain their vitality in water for considerable periods. The germs of enteric fever may come from persons long recovered from the disease, who are technically known as "typhoid carriers"; so that "bacilluria" is a very real danger where water for domestic purposes is drawn from even a sparsely inhabited area. Undoubtedly the pollution which is most dangerous to man is that produced by man himself. The alimentary canal, in health and disease, contains an abundance of the well-known B. coli communis; so that the presence of this bacillus in water (which, unlike typhoid bacillus, is easily determined) is an indication of contamination. In itself it is not considered dangerous, but only as an indication that more virulent species may be present, and it is chosen as a criterion of purity because of the fact that it is always absent in unpolluted water, but present where there is fæcal contamination, and its elimination is regarded as an assurance that all other germs of disease are also absent.

While waters containing impurities both of vegetable and animal origin are constantly being drunk with apparent impunity, yet in almost all cases it is found that sooner or later outbreaks of disease occur, pointing to some specific polluting material having gained access to them.

That serious epidemics have been caused by impure water cannot be doubted, and the instances which can be adduced in proof of this statement are so numerous that it is difficult to make a selection. One has only to mention such instances as the noted outbreak of cholera around Golden-square, Westminster, in 1854, when over 600 deaths occurred in one month, and the cholera epidemic at Hamburg in 1892, when fully 18,000 persons were, within eighty-eight days, attacked with cholera, over 8,000 cases terminating fatally. From July, 1907, to the beginning of 1909 there were upwards of 30,000 cases of cholera in Russia, accounting for 14,000 deaths, from a disease which was proved to have been water-borne. In 1874 there was a serious epidemic of typhoid at Over Darwen, no fewer than 2,035 persons, or one-tenth of the whole population, being attacked within a very short period. In 1882 an outbreak of typhoid occurred at Bangor (North Wales), 540 out of a population of 10,000 being attacked. In 1879 an epidemic occurred at Caterham (Surrey), 179 persons being attacked within a fortnight, and in this case the water was unwittingly polluted by a typhoid carrier. Then there are the well-authenticated instances of typhoid fever epidemics at Beverley (Yorkshire), Sherborne (Dorset), Mountain Ash district (Glamorganshire) with over 500 cases, Terling (Essex), where over one-fourth of the population was attacked within two months; the Maidstone epidemic in 1897; New Herrington (Durham); the Tees Valley in 1890, where there were 1,463 cases; the Lincoln epidemic in 1904, when over 1,000 persons were attacked and 119 deaths ensued in six months; and many others which might be cited; but these typical cases indicate that one of the most fruitful sources of epidemics is the use for dietetic purposes of water obtained from an impure source, or subsequently contaminated before reaching the consumer.

It is therefore most desirable that the water supply should be obtained from an untainted source. There is surely no reason why we should drink water that has been polluted if a supply can be obtained from an unpolluted source.

Having ascertained the quantity of water to be provided, and bearing in mind the great necessity of ensuring its purity, the next matter to be determined is the

SOURCE OF SUPPLY.

Sources of supply may be grouped as follows: (1) Subterranean springs or pervious water-bearing rocks, tapped by wells or boreholes; and (2) lakes or reservoirs which impound the waters of drainage areas.

Frequently the choice is like Hobson's, being chiefly governed by the natural peculiarities of the district and the character of the water desired; sometimes, as in the case of London, it may, solely for financial reasons, be advantageous to take a supply from rivers and from underground sources; or, like Liverpool, to draw it from reservoirs, and also pump it from wells; but generally the relative cost of different projects, gravitation versus pumping, is the determining factor.

All sources of supply are, of course, initially dependent upon the vapours and mists which rise by sun and wind from earth and sea, returning again as the rains of heaven. Notwithstanding the number of meteorological stations and the daily and hourly records made of weather conditions all over the globe, it is only possible to forecast in general terms the weather conditions likely to obtain within the ensuing twenty-four hours, and such terms are usually vaguely ambiguous, while sufficiently comprehensive to cover all eventualities. By continuous and careful observation of the rainfall we are, however, enabled to arrive at certain conclusions as to the available yield

* Lecture delivered recently at Bolton

[illegible] period [illegible] to [illegible] a source of supply. [illegible] [illegible] and by [illegible] observations to [illegible] the [illegible] and the loss by evaporation [illegible] [illegible] [illegible] [illegible] all over the British Isles by means of [illegible] [illegible] [illegible] [illegible]

owning landowners. Against this must be balanced the loss, repairs and continued annual cost of pumping.

It has been pointed out that, in the case of a well or borehole from which underground water is abstracted by an adjoining or another well or borehole, the owner of the former has no remedy at law against the owner of the latter well, since there are no laws conferring prescriptive rights of property on underground water flowing in a defined channel. The law with regard to the question of ownership in underground water first became definitely settled by the leading case of *Chasemore* v. *Richards* (1859). The plaintiff in this case was the occupier of an ancient mill on the river Wandle, and for more than sixty years he and the preceding occupiers of the mill had used and enjoyed as of right the flow of the river for the purpose of working their mill. The defendants were the Croydon Local Board of Health, who, for the purpose of supplying the town with water, sank a well to the depth of 74 ft. in their own land at a point about ¼ mile distant from the said river, and pumped, abstracted and intercepted underground water that otherwise would have flowed and found its way into the said river, and so to the plaintiff's mill. The quantity so diverted was sufficient to be of sensible value towards the working of the plaintiff's mill. The water so diverted was underground water flowing in no defined channel, but percolating or oozing through the soil more or less according to the quantity of rain that might chance to fall. The House of Lords held that the principles which regulate the rights of owners of land in respect to water flowing in known and defined channels, whether upon or below the surface of the ground, do not apply to underground water which percolates through the strata in no known channels. This decision has been confirmed by subsequent cases, including that of the well-known and oft-quoted action of *Bradford Corporation* v. *Pickles*. In this instance Mr. Pickles, the owner of lands adjacent to those of that corporation, on which were valuable springs of water, sank a shaft on his own property, and drove a tunnel by means of which the waters of the said springs were tapped and conveyed away. The House of Lords (1895) decided that Mr. Pickles was entitled to divert or impound the water percolating beneath the surface of his lands so as to prevent it reaching or assisting to feed the springs belonging to the corporation, thus clenching the common-law doctrine that water percolating underground belongs to the owner or authority who can catch it first.

PROTECTION OF UNDERGROUND WATER SUPPLIES.

In 1910 a Bill entitled the "Water Supplies (Protection) Bill" was introduced into the House of Lords by Lord Desborough, by which it was proposed to restrict the powers of authorised undertakers (such as corporations) in the following ways: (1) By preventing the acquisition of fresh underground supplies without specific Parliamentary authority; (2) by rendering water authorities liable to give compensation for injury to private supplies, and (3) where water is taken from one district to supply another, by conferring on the local authorities of the districts from and through which the water is taken the right to demand a supply from the works of the undertakers, terms to be agreed or fixed by the Local Government Board. These proposals were deemed so important that a Joint Committee of both Houses of Parliament was appointed to consider them, and they issued a report upon the matters raised in the Bill, and also with the larger question of the alleged uneconomical use of the water resources of the country. The committee in their report refrained from making any recommendations upon the question of compensation, but rightly pointed out that damage to private property is caused not only by water authorities, who are under statutory obligations, but also by collieries, breweries, railway companies, and others, who also extract water from the subsoil; so that the operations of the Bill would, if passed into law, be unequal. Coming to the larger question, the committee stated that several witnesses had expressed their apprehension that the water supply of the country is not being utilised to the best advantage owing to the want of information on the subject of the general water supply, and the haphazard and arbitrary fashion in which local sources of supply are sometimes wasted, and often appropriated for the benefit of distant places without regard to the needs of the locality from which the water is taken, or of the country as a whole. The committee was struck by the absence of trustworthy information as to the underground water supply available in any particular district, and as to the effect of rainfall on the water levels in various parts of the country. In their opinion a remedy for this state of things is urgently demanded and they thought it may be found by creating an organisation empowered to inquire into the whole question of surface and underground water supplies from a comprehensive standpoint, to supervise the future allocation of supplies, and to serve as an authoritative adviser to Parliament in the consideration of particular schemes. Of course, this idea was not a new one, and various Royal Commissions have made recommendations along the same line, but nothing has yet been done. Only the other day Mr. B. Hall Blyth, president of the Institution of Civil Engineers, in his presidential address stated, in dealing with the question of water supply in Scotland, that, while he admitted that the Local Government Board exercised a zealous control, and took care that adequate supplies of water were provided where they were required, he was satisfied that much money might be saved, and the water supply of the country conserved if a number of places in adjoining districts and counties combined and introduced one large comprehensive supply rather than that each separate place should have an independent supply for itself.

"Take, for instance, my own county of East Lothian," he said. "There every town and village has its own independent supply, with separate reservoirs, separate compensation water, and separate lines of main pipes bringing the water from the hills to the various points of supply." He thought it would have been infinitely better and much more economical if all these places had combined, and had one comprehensive scheme dealing with the whole county.

"Is it," he asked, "too much to hope that, in future—and much remains still to be done—the Legislature will take care that this question of combination is duly considered before any supply for a comparatively restricted district is sanctioned?"

Dealing with the question of the quantity of compensation water that should be given off, the president said it seemed absurd that this should be left to be fought out under every little Bill, and it should be fixed definitely by the Legislature. It often happened that the promoters of a scheme where no landed proprietor had a sufficient interest to oppose it—got off with the provision of far too small an amount of compensation water. This matter was really a national one, and should be settled, not in the interest of any individual proprietor, but of the public at large. When the available sources of supply were yearly becoming more and more scarce it was essential that adequate provision should be made to secure that our rivers and streams had at all times a sufficient supply of water sent down them.

(To be continued.)

Coast Sand Dunes (By Gerald O. Case, St. Bride's Press, Limited, 24 Bride-lane, E.C., price 5s.).—The rapid increase of sand wastes around our coasts is indeed a serious one, and Mr. Case has done a valuable work in the writing of this book.—*Southport Guardian.*

Manchester Engineering and Technological Societies.

Acting upon resolutions passed at a conference of representatives of the engineering and technological societies in Manchester, held at the invitation of Sir Thomas Holland on May 1st, a Provisional Organising Committee, then appointed, considered a scheme of co-operation between the societies for the purpose of providing a common meeting-room and reference library, and prepared a circular letter setting out their proposals. Mr. W. P. Anderson, the secretary of the committee in question, now writes that on the outbreak of war he was instructed to withhold this circular, and having since been able to consult Sir Thomas Holland and Dr. Edward Hopkinson (who acted as chairman in the former's absence) he has been requested to say that the latter consider the scheme ought not to be pursued at the present time, when the energies and efforts of so many of those interested are fully absorbed in more urgent work.

THE CHRISTMAS HOLIDAYS.

Owing to the necessity for going to press earlier than usual, news and advertisement matter intended for insertion in next week's issue of "The Surveyor" must reach us not later than Wednesday morning, December 23rd.

Institution of Water Engineers.

WINTER GENERAL MEETING IN LONDON.

The nineteenth winter general meeting of the Institution of Water Engineers was held on Friday last at Baffin's Hotel, London, under the chairmanship of the president, Mr. T. Molyneux (Stockport). The following members were present: Messrs. Henry C. Adams (London), Arthur Andrew (Oldham), F. J. Bancroft, N. Barnett, J. C. Barrowclough (Batley), W. J. E. Binnie (London), William F. Bird (Manchester), Norton Wood E. L. Buckham (Sunderland), Frank H. Brunt (Gateshead), W. T. Burys (London), Samuel C. Chapman (Torquay), Walter Clemence (London), A. H. Cooper, W. Valley, J. W. Davies (Nottingham), Fred J. Dixon (Ashton-under-Lyne), Gerald T. Edwards (Leicester), C. E. Gennings (Worcester), Percy Griffith (Worcester), [illegible], E. Young Harrison (Guildford), H. C. Head (Winchester), H. Ashton Hill (Birmingham), F. W. Hodson (Loughborough), Alex. H. Jameson (London), W. R. Jenkins (London), Dawson Kitchingman (Southampton), G. W. Loggin (Ceylon), F. W. McCullough (Belfast), C. B. Newton (Hull), Charles Oldham (Ipswich), Charles H. Priestley (Cardiff), E. J. Silcock (Leeds and Westminster), C. Clemesha Smith (Wakefield), John Ward (Derby), W. Whitaker (Croydon) and E. L. Williams (New Barnet), members; J. H. W. Arney (Torquay), Alfred E. Drewe (Westminster), J. Edmondson (Manchester), and Fred Hammond (Chepstow), visitors.

The secretary read the minutes of the nineteenth ordinary summer meeting held at Stockport, and these were confirmed.

THE ACCOUNTS.

The PRESIDENT formally moved the adoption of the accounts for 1913 as published in the "Transactions." He said he believed the members would consider them very satisfactory, for a balance had been carried to the accumulated fund on the year's working of £192 9s. 8d. The past year had been the best one they had ever had, and they now at all events seemed to have turned the corner, and he believed in future they would always have a good balance to the report at the end of the year.

The motion was carried.

BENEVOLENT GRANTS.

The PRESIDENT moved: "That the members present at this meeting do confirm the decision of the council to [illegible] from the accumulated fund of the institution [illegible] of fifty guineas to the Prince of Wales' War Relief Fund, and a sum of twenty guineas to the funds of the Red Cross Society." He explained that the council had consulted their solicitors as to the legality of making these grants, and were advised that, under sec. 3, subsec. 19 of the Memorandum of Association, the council were justified in subscribing the £21. From the strict legal point there was some doubt as to the power to subscribe to the Prince of Wales' Fund as it was not strictly an "institution or undertaking." Under the circumstances their legal advisers considered there was little risk of any member objecting.

Mr. C. CLEMESHA SMITH (Wakefield) seconded the motion.

In reply to Mr. E. Y. Harrison (Guildford), the PRESIDENT said the only objection to the grant could come from a member. Every member had received notice that the resolution would be proposed, and no one had objected. If those present voted in favour of it, he took it that all the members were unanimous.

The resolution was then carried.

SYMPATHY WITH BELGIUM.

The PRESIDENT said the members would be glad to know that he had written a personal letter to Dr. Kemna, of Antwerp, offering the heartfelt sympathy of the institution in the trials through which the Belgian nation were passing.

Mr. A. B. E. BLACKBURN (Sunderland) suggested that it would be a graceful act on the part of the institution to vote something to the Belgian Relief Fund, and it was agreed that the council should be requested to consider the granting of a sum of thirty guineas.

ELECTION OF OFFICERS.

The ballot for the election of officers resulted as follows:—

President: Mr. F. W. McCullough (Belfast).

Vice-presidents: Messrs. A. B. E. Blackburn (Sunderland) and S. C. Chapman (Torquay).

Ordinary Members of Council: Messrs. F. J. Dixon (Ashton-under-Lyne), C. B. Newton (Hull), H. Preston (Grantham), C. H. Priestley (Cardiff), E. J. Silcock (Leeds and Westminster), H. W. Woodall (Bournemouth), J. C. Barrowclough (Batley), H. C. Head (Winchester), A. J. Jenkin (Jersey) and C. H. Roberts (Aberdeen).

Mr. F. W. MCCULLOUGH said he must express his thanks to the members and acknowledge the high honour they had done him in electing him as their president for the coming year. He had been a member of the institution from the beginning, and he did not think any member had more admired its progress. He could offer the members an invitation from the Lord Mayor and the chairman and members of the Water Trust to visit them in Belfast on the summer meeting, and he hoped he would be able to interest them there. He hoped by then that the dreadful war would have spent itself, and that they would be able to come safely across the Irish Channel.

NOTES ON SCRAPING A 15-IN. TRUNK MAIN AT BATLEY.

By J. C. BARROWCLOUGH,
Waterworks Engineer.

The Batley Corporation were originally partners in a joint undertaking, belonging to Batley, Dewsbury, and Heckmondwike, but, owing to increased demands for trade and other purposes, dissolved partnership, and obtained Parliamentary powers to construct their present works in 1871. These works consist of three impounding reservoirs, situate on the eastern slope of the Pennine chain, near Holmfirth, about 17 miles of 15-in. trunk main, and a covered service reservoir at Staincliffe, within the borough of Batley. One small village, named Brockholes, is supplied by a branch main direct from the trunk main.

The works were completed ready for turning on water to Batley in September, 1875. The water is obtained from moorland pastures and springs from the millstone grit, being of excellent quality, and, having only 2 deg. of hardness, is exceptionally well suited for dyeing, scouring, &c., in the heavy woollen industry carried on in the borough. There is no filtration or other treatment of the water, except a system of automatic flood-gates, which divert the acid water washed from the peat, particularly after drought, into the lower or compensation reservoir.

In 1880 it was found necessary to construct a new storage well at the head of the main, in consequence of the reduced quantity of water obtainable from the lower well. The theoretical discharge from this new well was 1,680,000 gallons per day; but when tested in 1893 by the Waterworks Committee with a pressure equal to the level of this new well, the discharge was 1,400,000 gallons. In 1895 the discharge from the same level was 1,387,000 gallons per day. In 1902 the discharge had fallen to 1,347,000 gallons per day. In 1907 the delivery was only 1,262,000 gallons per day. This reduced quantity again caused additional head to be used, and water was delivered from a relief well situate above the level of the lower reservoir.

The author had reported on the condition of the main in 1902, with estimates of cost, both of scraping and of laying a new main, the former being £1,500 and the latter £40,000. Increased consumption and decreased discharge of main again brought the matter forcibly before the council in 1907, when further reports were made, and, having only this one main to supply the town with water for all purposes, it was decided, as a preliminary measure, to obtain an additional supply from one of the neighbouring authorities. An agreement was therefore entered into for a minimum supply of 1,000,000 gallons per week, and a maximum of 2,500,000 gallons per week. This arrangement improved the conditions of supply considerably, and the question of scraping was delayed until 1911. The discharging power of the main at this time was reduced to 1,092,936 gallons

easily manipulated in either direction with little

over the hills, with the consequent difficulty of

&c., following with the main body of water, instead

along by the "pressure-discs," thus reducing mate-

cups, and are lined with leather buckets, which expand and contract according to the nature of the

Illustration of Main Scraper Employed at Batley.

In the early part of 1912 a trial length, of 2,600 yds. was set out, and hatch-boxes fixed on one of the worst gradients.

Iron scraper was inserted at the top of this trial length, near the service reservoir, and the main emptied through the bottom valve, the reservoir being shut in; the hatch-box lid at the bottom of the slope was then removed and the bottom valve opened. The scraper immediately responded, for scarcely had the valve been opened two turns, before the telephone bell at the lower hatch-box informed us that the scraper had started. The first run occupied two hours thirty minutes, and the second run one hour forty-five minutes.

This trial proved so satisfactory that the Waterworks Committee (who were present) gave instructions to proceed with the arrangements for scraping the whole 17 miles of main.

An agreement was entered into by which the corporation agreed to fix the necessary hatch-boxes and to provide labour, and to be held responsible for breakages due to scraping, the author being so confident that this form of scraper would eliminate ordinary risks of this kind that he recommended the corporation to accept this risk, the amount paid for the use of the scraper being on this account reduced by one half.

The work of fixing hatch-boxes was then proceeded with, as occasion permitted—that is to say, that, as there was only a small service reservoir and one trunk main, the work was restricted to holidays and odd weekends. It may also be observed here that the consumption of water at Batley is 50 gallons per head per day for trade purposes, and 15 gallons per head per day for domestic supply.

[A section of the pipe-line which accompanied the paper shows the various gradients, and indicates the positions of bridges, hatch-boxes, valves, &c.]

The hatch-boxes were specially designed to meet the varying pressures and different thicknesses of the main. The positions of these required careful consideration, and were determined by three chief factors—firstly, the contour of the main and the positions of valves; secondly, the disposal of sludge and wash-water; and, thirdly, bridge crossings, where flat pipes having two waterways 9 in. by 10 in. each had been fixed on account of the little "cover" available at the time the main was laid. At these crossings it was necessary to fix a hatch-box on each side of the bridge.

A number of these hatch-boxes fixed, the first length was begun on Christmas Day, 1912, and between December 25th and December 28th the first four sections were completed without accident; some trouble was experienced through multiple-gear valves not closing down tight. Further hatch-boxes were fixed, and between Good Friday and March 26, 1913 (seven days), six sections were completed without trouble, except control of valves. Two pick shafts and a 6-ft. wood crow-bar with iron shoe were brought out of this section. Work was again proceeded with between May 9th and May 14th, and in this section the only cases where the scraper had to be cut out were due to unforeseen difficulties—[illegible] the pipes having been laid to cross a small beck and the fact not being recorded. The scraper head naturally jammed here and had to be broken out, after which the flat pipes were removed entirely, and circular pipes substituted. On the scraper being again inserted, it travelled to Bradley Railway Bridge, where it quietly came to rest. On opening the ground a reflux valve was discovered, of which there was no record. Owing to the enlarged waterway in the body of this valve, the whole of the available water was passing the scraper heads. The valve disc was removed and the scraper pushed forward by hand, when on closing the lid the journey was completed without further trouble, a total run of 3 miles.

The machine was again taken back to Somerset Bridge, and started for the second run, when all went well until it reached Bradley Canal Bridge, where it was again pulled up. On cutting out it was found that the scraper heads were compressed by long strips of lead, which had been cut from faulty joints during the first run and picked up on the second. One of these pieces of lead weighed 20 lb., and was 4 ft. 6 in. long.

All being made good, scraping had again to be abandoned in order to meet the demands of the town.

December 6th-13th.—The scraper was again inserted at Somerset Bridge and run to the reflux valve, where the lid had to be removed and the scraper pushed forward; on closing the lid the scraper proceeded to Cooper Bridge. Here, owing to the scraper head turning at right angles into the hole cut in the parapet wall of bridge, and thus temporarily blocking the waterway, the water and sludge rose to the top of the footway, and caused about 30 yds. of the wall to slide towards the river. Fortunately it remained in this overhanging condition until it was taken down and rebuilt. The cost of this was £30. Two wood straight-edges, one 9 ft. long and the other 6 ft. long, came out with the scraper at this point.

The next section was completed without trouble. From February 6th to 8th the work was finished without further accident or trouble, the scraper having been through all sections twice and some sections three times.

With the exceptions above named, the work was carried out without accident. Not a single case of a fractured main or blown joint occurred in the whole 17 miles. Air valves were not closed down, and were observed to close gradually and without shock as the scraper passed them, due, no doubt, to the low head of water used for propelling the scraper. The speed of the scraper was controlled to a walking pace, and was distinctly audible in most places without stethoscopes. To facilitate the control of valves, &c., a portable field telephone apparatus between hatch-boxes and valves proved of great service.

The amount of incrustation was ascertained by weighing various sections cut out when fixing hatch-boxes, and averaged 28 lb. per yard, or 22 tons per mile. No difficulty was found in disposing of this material, which passed away as sludge with the wash water. No complaint was received, except from the small village of Brockholes, which was unavoidably without water at times during the scraping of the earlier sections; the town supply was fully maintained without dirty water or inconvenience of any kind.

The delivery of the main which, before scraping, was 1,092,936 gallons per day, was increased to 1,527,462 gallons per day. This will be further increased when certain flat pipes and other obstructions have been removed.

The cost of the work was as follows:—

	£	s.	d.
Hatch-boxes and fixing. (Capital) ...	650	0	0
Scraping, including loan of scraper. (Maintenance)	600	0	0
Total ...	£1,250	0	0

Cost per yard for excavation, &c. ... [illegible]
Cost per yard for scraping, &c. ... 1 8½

Total cost per yard [illegible]

The laying was [illegible] 1874 and 1875 [illegible] 667 feet. [illegible] The [illegible] ing. The air valves are double, and have screw-down valves.

The cost of the main is made up as follows:

Cost of land, &c.			673	0 0
Parliamentary, compensation, commission, &c. ...			329	0 0
Laying ...			16,540	0 0
	Total		£17,182	0 0
Pipes, &c.			50,000	0 0
	Total		£67,182	0 0

These figures give the following proportions:

	£	s.	d.
Construction, &c.	17,182 say 0	11	8 per yard.
Pipes, &c. ...	50,000 " 1	13	4 "
Total	£67,182 " 2	5	0 "

The increased capacity of the main resulting from the scraping has not only enabled the author to reduce the general working head, but to utilise certain leakage from reservoirs, which was previously lost.

It is impossible to lay down hard-and-fast rules for pipe scraping, but the following observations may [illegible]

(1) The main should be carefully surveyed, and all possible information obtained as to the position of valves, special castings, &c.

(2) Where the main passes through private land it [illegible] as to its position [illegible]

(3) Hatch-boxes should be fixed as near to controlling valves as possible, and provision made in the lids for fixing pressure gauges, &c.

(4) The author (after the trouble experienced with [illegible] would prefer ordinary valves with by-pass valves attached.

(5) Ample outlet for sludge and wash water should be provided, and the main should be flushed out after each run.

(6) By scraping down gradients instead of up them danger of damage to main is much reduced.

(7) The degree of success attained will materially depend upon the care devoted to the preparations made in advance, and a full appreciation of difficulties likely to be met with, and perhaps the most important factor is a willing, cheerful and intelligent staff of workmen, ready to face difficulties and delays, together with an abundant supply of tools and tackle.

DISCUSSION OF MR. BARROWCLOUGH'S PAPER.

Mr. F. H. Brunt (Rochdale) said that one point [illegible] referred to in the paper was the after-effects of the scraping on the quality of the water. He knew of several cases where the process of scraping, both by power and hand driven machines, had been very successful in increasing the delivery of the mains, but discoloration of the water, due to the presence of finely divided particles of oxide of iron, had afterwards resulted. He was speaking particularly of towns using moorland water. Although the mains were continually flushed, the discoloration was always more or less present until the mains were eventually renewed. He would be glad to know if Mr. Barrowclough had had any trouble of this description. In cotton manufacturing districts the presence of oxide of iron in the water would cause considerable loss to spinners by producing iron stains on yarn, which would, he believed, render the yarn unsuitable for making anything but black cloth. From the experience already gained, he would therefore hesitate before recommending the scraping of mains in such districts. He had known cases also where steam laundries had complained for more than twelve months after mains had been scraped, and the only remedy was [illegible] The author had not mentioned the amount of incrustation, and he would like to know what was the thickness of incrustation in the main, and also whether there was any trouble due to ferrules projecting into the main.

Mr. [illegible] read that day there was a price given for pipes which in no way compared with that of Batley. As regarded the scraping itself, he did not think Mr. Barrowclough had shown any reason for the [illegible] 14 miles of 24-in. main with the Kennedy scraper under very difficult circumstances, and they had [illegible] out, and it was successful throughout. He did it [illegible] Mr. Barrowclough's, was only £54,000. The main was laid in 1886-7, and he knew the price at that [illegible] laid the price of iron was much higher. Still, the price given by the author was high. The increased delivery of these 15 miles of main was something like 1,250,000 gallons, and he considered it very successful and well worth the money spent on it. To [illegible]

Mr. [illegible] of Torquay, [illegible] that Torquay [illegible] was used, and it was published in Box's "Hydraulics" as follows: "A notable case of this kind occurred at Torquay, where a main about 14 miles long, composed of 14,267 yds. of 10-in., 10,085 yds. of 9-in., and 170 yds. of 8-in. pipe delivered only 317 gallons per minute, with a head of 465 ft. . . . By Prony's rule (32) the discharge comes out 616 gallons. The experimental discharge was therefore only $\frac{317}{616} = 51$, or 51 per cent of the theoretical; or, in round numbers, the discharge was that due to one-fourth of the head, so that three-fourths of the head were lost in undue friction. An ingenious scraper, suggested by the late Mr. Appold, and worked by the pressure of the water, was passed through the entire length of the pipes; and subsequently an improved one by Mr. W. Froude, was used with remarkable results, the discharge being increased to 564, and eventually, by repeated scraping, to 634 gallons, which is 18 gallons, or 3 per cent, more than the theoretical quantity. Errors of observation, or in the reputed sizes of the pipes, may account for the discrepancy." He might say that the main referred to was completed in 1858, and was first scraped in 1866, and during these few short years it had lost 61 per cent of its capacity. Annually since that time the main had been scraped. The first scraper used was very much like the Glenfield scraper, and then followed the scraper made by Froude & Box. That was tried for a short time and abandoned, and then the one made by Mr. Froude, and referred to in the extract he had read, was used, and was in use at the present time. It differed very largely from other scrapers, and worked without trouble or hitch. There were several points which one could comment upon, and one was the severe gradients mentioned by Mr. Priestley. With their pipe track they had many parts on which there were gradients of 1 in 3, and they always worked up these gradients, and the scraper took them as easily as a motor car took an ordinary hill. With regard to working in other directions, he did not see that there was anything very much to be gained in that. They scraped annually, and never had any blown joints or split

pipes and he thought a good deal must depend upon the condition of the main itself. With regard to the pressure heads being placed in front of the ploughs, he did not think there was anything in it, for this reason: If the pressure heads were in front to the circumference of the main, then the scraper would fail to drive along. One would infer, therefore, that the pressure heads did a large portion of the scraping, and the ploughs which followed after simply took up such things as the pressure heads might leave behind. With regard to the question of getting rid of the *débris*, he did not think it was one which need be considered with any seriousness, because if the wash-outs were open at the low points, then, as the scraper travelled along, the whole of the *débris* was washed out, and there would be no trouble with any accumulation in front of the scraper. He got no trouble with his scrapers. They ran right through, and when they came to the end there was practically no *débris* to take out. Of course, they had to close the wash-outs after they had passed them. The author had referred to the scraper turning at right angles at Cooper Bridge, and he could quite understand that, because if they looked at the drawing they would see that the axis of the scraper was so short that when it came to any opening fairly wide it would tend to turn sideways. Nothing of that kind could happen with a scraper of another design. As to discoloration, they had scraped the Torquay mains annually for a great number of years, and there had been no trouble at all from discoloration. They did find, however, if they scraped one of the smaller distributing pipes where the flow of water was not so great, that discoloration occurred, and, although he had scraped small pipes in the past, he did not think he would do it again.

Mr. PRIESTLEY remarked that he had had no trouble whatever from discoloration if the main was properly washed out.

Mr. BRUNT: That applies to drinking water only.

Mr. PRIESTLEY: Yes.

Mr. F. J. DIXON (Ashton-under-Lyne) said Mr. Chapman had not told them whether each side of the pipe was coated or not.

Mr. CHAPMAN: Uncoated.

Mr. DIXON said that made a great difference. If the pipe had been thoroughly coated it might have been thirty or forty years before it needed scraping. He wondered whether Mr. Barrowclough had ever considered the question of treating the water before it entered the main. Although the author had obtained an increased discharge equal to 44 per cent. he (the speaker) was of opinion that in five years or less he would have to scrape again. He had just scraped about 6 miles of 18-in. main. Some years ago he scraped 6 miles of 18-in. main, and after two years found it necessary to scrape again. In the first case the increased capacity was equal to 27 per cent, and, judging by the discharge now, he had lost 10 per cent. On the strength of his opinion that Mr. Barrowclough would have to repeat the scraping in five or six years' time, he suggested that it would have been advisable for him to have purchased his ferret right out, and so reduce his costs in subsequent scrapings. He had scraped some small mains badly incrusted, and after visiting Batley he adopted the Power machine. Mr. Barrowclough was one of the first to use the Power machine, and he would like to know why he did not use it in preference to the Eric in the operations he had described. His own experience of the Power machine was disastrous, and the discoloration lasted for months, especially on distributing mains. The Manchester Corporation were considering the question of doing a lot of mains, and their engineer came to him to see the result. He asked to go into a house where they had scraped the mains, and on turning on the tap the water came out highly discoloured with oxide of iron. He found discoloration now, after three years, and the only way in which he could remove it was by having a hydrant at the end or intermediate running continuously, so as to keep the water moving. As regarded cost, he had prepared a paper which he would hand in to be included in the minutes. His experience was that damage was caused to the pipes by the action of the Power machine, and he was now experiencing breakages due to its use. He had used the Kennedy scraper for the trunk mains, and he preferred it to the Eric. Mr. Barrowclough said he had had no accident or breakdown, but he referred to the scraper heads being compressed by long strips of lead. Personally he preferred to work in front of the power, especially in highly encrusted mains, because where the plough or ferret was in front of it it had a tendency to work in revolving, and eat itself through. In the case of the Eric it did not, as the pressure discs were in front, and he considered were more likely to become jammed than was the Kennedy scraper. When the Kennedy scraper encountered a tongue of lead it broke it off, and allowed it to pass the pressure head, whereas he was of opinion that the Eric scraper would not. The speed of the scraper was somewhat slow at Batley, and he saw that the incrustation was very heavy. He felt, however, that the method of estimation was not absolutely accurate, because his experience showed that incrustation was greater where the velocity was greater, and consequently it was hardly fair to take the hatch-boxes, where the velocity was great, as an average for the 17 miles. The amount of incrustation he had found in his 18-in. main was equal to 10 lb. a linear yard. He had to scrape flat pipes by hand scrapers. Originally he did not do so, and he found the discharge not what he expected; but after hand scraping he got an increased discharge of 27 per cent. He would like to know what loss of capacity had taken place at Batley since the scraping was done. The question of incrustation was very interesting, and there were several works on it. He was looking at the discussion on a paper read by Mr. Rideal, junr., and it was stated that, in the case of steel pipes laid across the Tay Bridge thirty-one years ago, there was practically no incrustation six months ago. In the case of the Nidd Valley works, Mr. Watson stated at Glasgow two years ago that with the cast-iron pipes there was incrustation of about 1¼ in. all round, whereas in the steel pipes there was no incrustation whatever, or only a very black slime. This showed that so long as the surface was smooth, with a good coating, there was no trouble. He believed there would be little trouble with incrustation if a coating was very carefully prepared and applied to the pipes.

Mr. W. R. JENKIN (London) asked if any gaugings were made immediately after the main was laid in the first instance. The author told them that the theoretical discharge in 1895 was 1,680,000 gallons a day, but that, he took it, was when the main was twenty years old. Working the discharge out by Hayes & Williams' formulæ that gave a discharge of the new main as 2,400,000 gallons. The discharge of 140,000 gallons a day was about 58 per cent of the discharge according to the Hayes and Williams' formulæ for a new pipe. It would be interesting to know how far the discharge of the main, when it was originally laid, corresponded with that formulæ, and what proportion of the original discharge was regained by scraping.

Mr. A. B. E. BLACKBURN (Sunderland) said he would like to ask when it became economical to scrap instead of scrape, and also what was the smallest size of main which could be economically scraped with this kind of scraper. It seemed to him some engineers had very bad water to deal with, and especially the Torquay district, where the mains had to be scraped every year. It would, he considered, add to the interest of the paper if Mr. Barrowclough could also give an analysis of the water. In Sunderland he had never yet had to scrape a main, and did not think he ever would. The mains were fifty or sixty years old, and there was a little incrustation, but not a great deal. He would like to know the minimum pressure necessary to drive the scraper.

Mr. H. ASHTON HILL (Birmingham) said Mr. Blackburn had rather anticipated his remarks. The collection of articles the author got from the main would make a nice museum, but he had not got the barrowloads of macadam which he had found under similar circumstances. In one case he had the macadam acted as a sort of valve, which led to the consumers getting no water. When, however, the inspector went round the next day, the macadam had fallen back and the water supply was all right. With 22 tons of incrustation per mile an interesting question was as to how many tons went through the consumers' taps each year, and an analysis of the water would show that. He was wondering whether it would not be more economical to put up a filtering plant to take all this solid matter out of the water. If it was not cheaper it certainly would be better. With regard to the point raised by Mr. Dixon they had to take into account not only the quality of the water, but also the quality of the steel. He was at some works in Birmingham where they dealt with water supplies to public institutions, and saw some pipes which had

been taken up and were not corroded up, but were eaten through. He saw there a tank the sides of which had been eaten through, while the bottom was all right, and on calling attention to that he was told the bottom was a different steel. It seemed, therefore, unless they had an analysis of those things they must not generalise or dogmatise too much.

Prof. A. H. Jamieson (London) asked the author the levels of the inlet of the small tank from which the water was drawn, as this would be a useful record of the falling off. It seemed to him they could learn useful lessons as to testing small mains in the future, and one would be to get contractors to run a scraper through before the mains were accepted. Another thing was that the expense of scraping would be considerably reduced if hatch-boxes were put in at the beginning; £600 was a small item in £60,000 of capital expenditure, but a considerable item to add to revenue. One advantage of having ploughs in front of the pressure discs was that the water passing in the ring, including spaces round the discs, had a considerable scouring power. He would like to know if the author weighed any of the pipes after scraping, and could tell what the loss of weight was. The amount of incrustation was very large indeed, and must have affected the quality of the water. As to discoloration, was it not possible that it was largely a sediment in the surface pipes, and that if the surface pipes were cleared out before the scraping was done, a good deal would be avoided?

Mr. W. J. E. Binnie (London) said the rate of falling off in the discharge capacity of the main after eighteen years appeared to be 17 per cent, while in twenty years the falling off was 17·4 per cent. In twenty-seven years it was 20 per cent, in 1902 25 per cent, and in 1907 the falling off was apparently 35 per cent. Apparently, therefore, in four years the falling off jumped from 25 to 35 per cent. As a rule the discharging capacity fell off very gradually. His firm was called in by the Western Australian Government to investigate a case of failure of a big main at Coolgardie, and one conclusion they came to was that it was air in solution in the water which was one of the factors in a chain of chemical action before incrustation took place. They found that at the points where the air became disengaged the incrustation was most. This would again follow in places where the velocity was highest. Where the static pressure fell off there again they would find incrustation. One of the recommendations they made to the Western Australian Government was to remove the air and to add 3 grains of lime to prevent very soft water.

Mr. H. C. Adams (Newmarket) said the most important hint in the paper was the last paragraph, which was that if success was to be obtained by scraping, there must be full appreciation of the difficulties to be overcome. In the course of his wanderings he had come across an unduly large number of cases where scraping had been a disastrous failure. There had been more in country districts, where the people had been dependent upon commercial rather than expert advisers, and had entered into such schemes and been sorry afterwards. But there were many cases where it had been successful, and the troubles which had been enumerated to him he was sure could have been overcome by carefully considering the problem beforehand. A short time ago he carefully examined a stack of pipes representing a mile or two which had been taken up because they were badly incrusted. All the pipes were made at the same time by the same firm, and had carried the water the same number of years, but the incrustation varied within very large limits. On looking into the matter closely he came to the conclusion that the evidence distinctly showed that the incrustation varied with the perfection of the coating. Some pipes which were well coated showed little trace of incrustation, while others badly coated were almost choked up. The special castings, and the junctions particularly, were incrusted worse than the straight pipes. The velocity through the junctions would be greater than through the straight pipes, and at the same time the coating was infinitely worse in the special castings than in the straight ones. On removing the nodules, in the majority of cases, he found a pinhole through the coating which exposed the iron underneath. It seemed fairly obvious that if that nodule was removed the water had a more favourable chance of attacking the iron than if it was left in, and that seemed to show that when they once scraped a coated main attacked in that way the chances were that they would have to scrape it periodically. Of course, coatings were not always formed of oxide of iron, and if it was formed of something independent of iron, then his argument of having to scrape again would not apply.

Mr. James A. Hutchinson (Paignton) sent the following remarks, being unable to attend the meeting: "I have recently finished scraping an interesting section of 9-in. main, 17 miles long, and have had a variety of troubles. The scraper I first used got stuck and badly damaged, and as the work was urgent, Mr. Chapman, of Torquay, very kindly lent me his to get mine out and to finish with; this one stuck within a mile of the start, and for the first six miles frequently stuck for a long time. I was thirty-nine hours scraping the first 6 miles, the work being continuous. The 17 miles was eventually scraped in seventy-five hours between the Wednesday morning and the following Sunday morning. The whole of the 17 miles had been scraped before, part last year and part the year before. The lead taken out from this 17 miles has been altogether about 4 cwt., also stones (some about 4 in. thick), sand, gravel, bolts, and lumps of iron, all in addition to a very large quantity of corrosion in nodule form. At first examination the condition of the coating after the removal of the nodules appeared to be excellent, but on closer examination I was found that the coating was punctured under the nodule, and the whole of the surface of the iron under the nodule attacked and the iron removed, and only a graphite form of carbon left. The depth to which this change had taken place was in some cases as much as ¼ in., and the outline of the area attacked coincided almost in every case examined with that of the nodule which had overlain it. The pipes came from France, and are extremely hard and tough, and were jointed by first caulking in a ring of lead and then running with hot lead and caulked after. The water is derived from a peat gathering ground in the heart of Dartmoor, and contains several bad peat bogs, where horses sometimes are trapped and die; these bogs are being drained. The total hardness of the water is about 3 deg. after passing through a battery of pressure filters containing a bed of magnesium oxide for hardening purposes. The water contains only a trace of iron before filtration and none after. The theoretical discharge of the main is about 618,000 gallons per twenty-four hours; before scraping this year the discharge was 540,000 gallons per twenty-four hours, and since scraping I have got as much as 689,000 gallons through in the twenty-four hours after the main had had time to settle down. The usual discharge since scraping has been 666,000 gallons per twenty-four hours. I may mention a curious fact—the delivery of the main is greater now than when first laid new about ten years ago; this is probably due to the amount of lead which had got in."

Mr. C. Clemesha Smith (Wakefield) said that in an interesting paper on the incrustation of pipes read by Prof. Campbell Brown before the Institution of Civil Engineers, the author seemed to infer that incrustation took place more readily where the water was acid in nature. In most of these cases the water was peaty and acid. In his own case, where the water was extremely acid in its raw state, they had had trouble. Some years ago they put in a Venturi meter, and after some time it was found to work very irregularly. They were aware that the meter had to be cleared of air from time to time. They found they had to open the cocks and discharge the air once a day, and after a while there was so much air that the meter would not work properly. On taking it down they found that the part made of aluminium was eaten away by the action of the acid water. It showed that a considerable effect took place where they got two metals in contact with acid water. It had been found where they had these nodules that the coating had been penetrated underneath, which seemed to be due to the fact that in coating small bubbles of air or gas were underneath the coating and formed a small aperture. In laying mains last year he tried the experiment of having the coating applied twice, so that if bubbles formed the probability was that they could not get one over the other. They would see in future whether that would be effective.

Mr. H. C. Head (Winchester) said that, as most of them were water engineers only, they might not be familiar with the method of laying gas mains. In the past gas mains were stopped up with bags, but recently they had been stopped back with what was called the gas-main stopper, which consisted partly of a rubber disc. The rubber disc filled the pipe quite closely, and as each main was laid was pulled for-

at first, there was exceedingly rapid incrustation. but how did he work the gradient approaching Riding sure working down that gradient. The cost of laying the main seemed to be exceedingly high, although it know how many years it would be before the author thought he would have to scrape again. Nothing had in situ. He wondered whether that had ever been tried after scraping so as to try and stop the main becoming incrusted again. He should think it would not be beyond the water engineer to devise something to do that. He took it from the author's opening remarks that he would agree if the water had been filtered in the first instance the corrosive action could have been neutralised, and personally he would suggest that Mr. Barrowclough should seriously consider the question of filtration now. Perhaps, also, Mr. Barrowclough might tell them what difference there had been in the delivery between the time he had taken the flat pipes out and now.

Mr. Barrowclough, in reply, said they had had no trouble at any time from discoloration of water owing to scraping. They had a large calico-printing works and several steam laundries taking water from them, but at no time had they received any complaint of discoloration of the water or of any damage to the fabrics. There were no lead surfaces on this trunk main. The thickness of incrustation where the pipe was cut was about 1½ in. in the heading, and consisted largely of oxide of iron and some sand and peat. He was sorry he could give no details of the cost of the field telephone, but it was not expensive. The contractor provided it, and he arranged with the local telephone people to utilise the telephone posts along the highway on which to sling the wire. The weight of the incrustation was ascertained from the sections taken out. A yard was carefully measured, and the whole of the incrustation weighed. Six sections were taken out in the whole length of the pipe, and the average came out as stated. He agreed that the cost of the main was heavy, and the pipes themselves cost £50,000. At the time cast iron was £9 per ton. As to the Eric not being preferable to other scrapers, of course all these things were matters of experience and opinion, and his only reason for adopting that form of scraper was because he was satisfied there was an advantage in being able to work the scraper with considerably less head than was required for a scraper where they had to drive it with discs behind. The whole of the available head was used in this form of scraper, whereas in the disc scraper a certain amount of slip-by water was allowed, which meant that they must work with very big heads. The second reason was because there was no danger of being blocked in by incrustation, which he had experienced with other forms of scraper. They had nothing very serious in the way of gradients, but he felt it was an advantage to work with less head wherever it was possible to do so, and they could work with less head if they came down a gradient. On the first trial section they worked with practically no heading at all. As to the *débris*, he considered it was better to get it out at the bottom of a slope than to force it over a hill. The reason for the scraper turning into the parapet of Cooper's Bridge was owing to the scraper touching a stone flange at the side of the opening. On the first two runs nothing of the kind occurred, but on the third run they found the flange displaced. The question of treating the water was under consideration, and he would like his committee to accept his views, but they had a very big trade interest involved in the water supply, and the traders were afraid that if they began to tamper with the water, which was excellent for all purposes, they might make it worse. He was of opinion that in five or six years he would have to run the scraper through again, and he had come to the same conclusion as Mr. Dixon, that the Power machine driven by a lateral motor was too stiff in its action. The question of the cost might say he was doing 3-in. and 4-in. mains by a hand scraper at 6d. per yard, including depreciation not due to any fault of the scraper, but was owing to the contractor's mechanic putting on the front head by accident before the blades had been tempered, with the result that the front head settled on its side and allowed the water to pass the heads. This resulted in crushing, and made a certain amount of passage-way for the water which reduced the pressure. They could have driven it forward by putting on additional pressure, which was quite simple, but they considered it a convenient place to cut out and see what occurred. All the flat pipes had not been taken out, so that he could not give the figures of the discharge asked for. He had no information as to whether any gauges were taken after the mains were laid. In reply to Mr. Blackburn, the question of when it was advisable to scrap depended on circumstances. The fact of a main like his costing £50,000 being made to discharge almost its full capacity at a cost of £2,000 was a very material thing to consider; but with very small mains one would naturally prefer to scrap rather than scrape. At the same time with a hand or power scraper they could do it at little cost. He would put in an analysis of the water, which was a moorland water slightly on the acid side, and containing a little iron. As to minimum pressure they depended more on suction than pressure behind, and they frequently worked with not more than 20 lb. or 25 lb. indicated on the pressure gauge. He agreed that records should be kept, and probably they had been kept at Batley, but they were not handed down to him. He also agreed that it was better to put in hatch-boxes at the beginning, and particularly in dealing with moorland waters would this be an advantage. It was impossible to give the weight of a pipe after it was scraped, because they had been so successful that there was no reason to cut out a section. The rate of falling off in the discharge of the main was very irregular, and he had really no reason to give why it should be so. He agreed with Mr. Smith as to a second coating probably leading to the lengthening of the life of a pipe.

(To be continued.)

SEWAGE WORKS TENDERS.

DEWSBURY COUNCILLOR'S COMPLAINT.

In the course of the last meeting of Dewsbury Town Council, Councillor Garforth complained very strongly of the decision of a committee not to return to the contractors the priced schedules of quantities which accompanied their tenders for the sewerage contract at Mitchell Laithes. He contended that the committee was weakly constituted if it simply acted on the advice of Mr. Diggle, their expert.

Councillor J. Oldroyd remarked that the tenders had been sealed and put away. Evidently they were no good to the corporation, and he suggested that they should be returned to the contractors.

Alderman Gledhill admitted that the committee acted on the advice of Mr. Diggle and the town clerk in the matter, but it was an insult to suggest that in consequence of that fact they were a weak committee. Cases mentioned by Councillor Garforth were not parallel with the Dewsbury case, where they were going to do the work by administration. The tenders had been sealed up and put in the safe out of the sight of everybody. Alderman Gledhill proceeded to quote the opinion of the law editor of The Surveyor on the subject, which was to the effect that the committee had acted within their rights.

The minutes were confirmed.

Institution of Municipal Engineers.—A largely attended meeting of this body was held at Manchester and Salford on Saturday last. The proceedings—which will be fully reported in our issue of next week—opened at the Mitre Hill, Manchester, and included visits of inspection to the Salford Corporation flag-making and electricity works.

INSTITUTION OF MUNICIPAL AND COUNTY ENGINEERS.

COUNCIL MEETING: NEXT YEAR'S PRESIDENT.

A meeting of the council of the Institution of Municipal and County Engineers was held on the 5th inst., [illegible] Mr. J. S. Pickering, [illegible] Messrs. W. N. Blair, J. S. Brodie, G. F. Carter, J. W. Cassell, A. E. Collins, L. J. [illegible], A. P. Gibbons, W. Harpur, J. W. A. Hartshorn, W. F. Laurence, J. B. Martin, J. Mosscrop, P. H. Paterson, W. H. Prescott, N. Scrase, R. J. Thomas, H. J. Wadsworth, C. E. Wike, O. F. Wood, [illegible] and the secretary.

NEW MEMBERSHIP ROLL.

The following candidates were elected:—

Messrs. [illegible] W. A. Bain, chief assistant to [illegible] Lanarkshire, and W. Ross Young, town planning engineer, Lanark (Middle Ward).

Messrs. R. J. Brodie, assistant paper to county surveyor, Cumberland, Carlisle, and G. S. Hebden, engineer and surveyor's office, Goole.

Transfer from Student to Associate-member: Mr. G. Kershaw, engineering assistant to borough engineer, Islington.

UNIFORMITY OF TENDER FOR SANITARY PIPES.

The council decided to support the proposal of asking for tenders for sanitary pipes at a discount off the Standard Gross List prepared and published by the Midland Pipe, Northern Potters' and Devon and Dorset Sanitary Ware Manufacturers' Associations, and obtainable from Mr. W. H. Facon, secretary of the Midland Pipe Association, in view of the reduction of clerical work and simplification of classification rendered possible thereby.

PRACTICAL TRAINING OF ENGINEERS.

It was resolved that a sub-committee consisting of Messrs. J. Patten Barber, J. S. Pickering, J. A. Brodie, S. S. Platt and W. H. Prescott be appointed to consider and report on the Report on the Practical Training of Engineers issued by the Institution of Civil Engineers.

RECOGNITION OF DIPLOMA.

It was resolved that the Diploma in Municipal Engineering granted by University College, London, be recognised for the purposes of By-laws 1 (*b*) and 2 (*b*).

VOTE OF CONDOLENCE.

It was resolved to pass a vote of condolence with the family of Mr. H. Card in their bereavement. The late gentleman, as noted in our columns recently, held the post of county surveyor of Sussex from 1868 to 1898, and died at the advanced age of ninety-six.

NOMINATION OF PRESIDENT FOR 1915-16.

It was resolved that Mr. H. T. Wakelam be nominated president for 1915-16.

Mr. Wakelam received his professional training through the ordinary routine of pupilage with the late Mr. Benjamin Baker, the then borough engineer and architect of Wolverhampton. On the expiration of his articles in 1879, he was appointed assistant under Mr. Baker, holding that office for about two years, and was then elected assistant borough engineer of King's Lynn. In February, 1881, he was appointed as resident engineer to superintend a new sewerage scheme for King's Lynn under Mr. W. H. Wheeler, M.INST.C.E., being also engaged on the town hall and other buildings. He left King's Lynn in 1883 on his appointment as borough and water engineer of Oswestry, a position which he held until 1888, when he became engineer and surveyor of the Garston District, Liverpool. In 1892 he was elected county surveyor of Herefordshire. To his present post he was appointed in 1898, receiving the appointment of county engineer by special resolution of the county council in 1900. Mr. Wakelam is a member of the Institution of Civil Engineers, and a Fellow of the Geological Society, and is the author of many contributions to scientific bodies and journals.

Lincoln City Improvement Schemes. A special meeting of the Lincoln City Council last week passed a resolution in favour of the Bill which the corporation is promoting in Parliament dealing with commons, the provision of motor omnibuses and trolleys, extension of the electricity, plant, gas and water and sanitary matters.

ACHORUTES OR "PODURA" OF SEWAGE FILTERS.

BY J. W. HAIGH JOHNSON, B.SC., F.I.C.S.,
Chemical Biologist, West Riding of Yorks. Rivers Board, Wakefield.

I was particularly interested in Mr. G. B. Kershaw's communication on this subject, under the title of "Some Notes on Achorutes purpurescens," which appeared in a recent issue of your journal [November 13th].

Some time ago I devoted a considerable amount of attention to the examination of these insects; they were obtained from widely separated sources, and the following notes on this investigation may be of interest.

The literature dealing with these insects from a sanitary point of view is very scanty, and opinion seems to be divided as to their identity. The scientific titles of *Podura aquatica* and *P. tullbergii* have both been claimed by various writers on behalf of these well-known insects of sewage installations. With this in mind, I was greatly surprised to discover that the insects did not even belong to the genus Podura, but to the closely-allied one of Achorutes, the feet having two claws, instead of a single one, which characterises the former genus. With the aid of Lubbock's Monograph of the Collembola and Thysanura, I was at first inclined to regard these insects as *Achorutes purpurescens* of Lubbock, but the agreement with his description of that species was not satisfactory.

Since Lubbock's Monograph was written (1873) much valuable work has been done on this neglected group of insects, and the species now under consideration appears to be chiefly *Achorutes viaticus*, as described by Tullberg in 1872, and may agree with *Podura viatica*, Linnæus, 1746. This insect was apparently unknown to Lubbock when he wrote his Monograph, as he gives no description of it; there is, however, a scanty and inadequate description in the original French of *Achorutes murorum* Bourlet, which may refer to the present species.

The most recent systematic account of these insects is given in W. M. (Axelson) Linnaniemi's work, "Die Apterygotenfauna Finlands," Parts I. and II. In this work the insect appears under the new title of *Hypogastrura viatica* (*Tullb.*), but as the generic name of *Achorutes* is better known to British entomologists I have retained it in the following comparison and description. *A. viaticus* and *A. purpurescens* are very similar; the small capitals serve to emphasise the points of difference between them.

A. viaticus. Mucro (i.e., terminal portion of saltatory appendage), BROAD, with BROAD inner lamella. Colour generally BLACK.

A. purpurescens. Mucro TAPERING, with NARROW inner lamella. Colour, REDDISH.

A. viaticus. Antennæ 4 jointed, the fourth having a RETRACTILE TERMINAL PORTION. Eyes eight on each side of the head. Upper claw, with an inner tooth a little beyond the middle (as in purpurescens), with a lateral tooth on each side near the DISTAL end. Lower claw bristle-like, reaching to the tooth of the upper claw, with an inner lamella about half its length. Anal horns MORE SLENDER than in purpurescens, slightly curved, LONGER than the papillæ on which they stand. Papillæ SEPARATED at the base. Mucro with a BROAD, toothed lamella. Colour generally deep blue BLACK.

Lighter coloured specimens often occur, and are most frequent in recently moulted examples.

During these investigations specimens were obtained from several sewage filters in the West Riding of Yorkshire, and also from Harrow-on-the-Hill and Stratford-on-Avon. In all these cases the insects were chiefly *Achorutes viaticus Tullb.*, and later I was gratified to find that material from the last-named place had been previously so recorded by local entomologists. Prof. G. H. Carpenter, who kindly examined several of the above specimens, also informs me that this species is common in the Dublin outfall sewers. This insect usually feeds upon the slime which develops on the filter material of sewage filters; this slime consists chiefly of a bacterial zoogloea (*Z. ramigera*), débris, and other fungi. At Harrow-on-the-Hill the insects fed upon the green thalloid alga, *Prasiola crispa*. This alga, like the *Ulva latissima* of the slob-lands of Belfast Lough, rapidly absorbs the nitrogenous pollution in sewage, and thus provides a rich food supply for these insects.

A Recent Development of the Sewage Problem.*

By EDWARD ARDERN, A.R.C.Sc.

[illegible] part of the [illegible] that [illegible] to be the character of the [illegible] and the small [illegible] [illegible] to be [illegible] the design of a purification [illegible] so far as the oxidation of the [illegible] tion of the organic matters in solution is concerned. [illegible], it may be said that the opinion is largely [illegible] that the sewage problem has already been solved, [illegible] the fact that in many cases the question [illegible] the disposal to the tenants' energy and purse is a source of considerable difficulty.

Many years experience with various types of sewage purification plants have rendered it possible to state with considerable accuracy the purification capacity of any particular type. In this respect the researches of the Royal Commission on Sewage Disposal have been invaluable. It follows, therefore, that, having determined the type of purification plant most suitable for any particular sewage, the question is largely resolved into a mathematical or mechanical proposition as to the manner in which the requirements of the Local Government Board are to be complied with.

The subject of sewage purification was thus fast losing interest from the point of view of the research chemist, as, apart from the question of sludge disposal, apparently advances were mainly to be looked for in the direction of mechanical improvements designed to effect a more economical and efficient distribution of the sewage. The opinion may, however, be ventured that the present-day methods of sewage purification by no means represent the final solution of the problem, and it is submitted that the evidence given in the following communication is such as entirely to alter the present aspect of the subject, and to render it more or less certain that very considerable advance in connection with this question of sewage purification may be confidently anticipated in the near future.

As an introduction to the consideration of this new development of the sewage problem, the following extract may be quoted from a paper† entitled "Experiments on the Oxidation of Sewage without the Aid of Filters," by W. T. Lockett and the present writer:

"It has long been known that if sewage be exposed to the air for a sufficient period of time the organic contents are gradually oxidised with the formation of a deposit of so-called 'humus,' and the final production of nitrate from the ammonium salts and the nitrogenous organic matter. This purification change, of which the course of the reaction has been so carefully studied and thoroughly worked out by Adeney in his researches on behalf of the Royal Commission on Sewage Disposal, takes place, however, comparatively slowly, and even if aided by direct aëration by no means becomes a practical method of sewage purification.

"Numerous investigators have from time to time endeavoured to utilise aëration methods in the practical solution of the sewage problem, but until quite recently without any reasonable amount of success. Among the earlier investigations may be mentioned those of Dupré and Dibdin‡ on the aëration of London sewage, and those of the Massachusetts State Board of Health relating to the use of aëration in the filtration of sewage through gravel and sand filters. Dr. Brown,§ chemist to this board, concluded from the results of a series of experiments that the oxidation of organic matter in water was not hastened by vigorous agitation with air. Waring,¶ of the United States, was one of the first to apply aëration methods in the purification of sewage on a working scale. In 1886 Hartland patented an aëration chamber for the purification of sewage or tank effluent, which Kaye Parry|| employed in experiments undertaken in 1887. In a 1892 Lawrence conducted experiments on the aeration of filter-beds by a forced air supply. In the latter year Mason and Hine* published the results [illegible] on the [illegible] of mixture of sewage [illegible] water, in which they concluded that aeration had but little oxidation effect on the sewage. In 1897 Fowler† investigated the effect of aeration on the effluent resulting from the chemical precipitation of Manchester sewage [illegible], very tangible results being obtained, although [illegible] the total amount of oxidation was concerned.

It would thus appear that the results of the earlier investigations on the subject of aeration of sewage indicated that aeration *per se* could not be considered as a practicable adjunct in the process of sewage purification. Recently, however, the subject has been reopened by the work of Black and Phelps, Clark, Gage and Adams, and Fowler and Mumford. In dealing with the question of the pollution of the New York Harbour, Black and Phelps‡ studied the possibilities of the application of aëration to the treatment of sewage. Their experiments dealt with the aëration of both fresh and partially septicised sewage in various types of tanks, and it was shown that, under certain conditions, it was possible by means of a reasonable amount of aëration to remove the more readily putrescible matters from the sewage, and thereby to a certain extent increase its stability.

"Black and Phelps were so far convinced of the practicability of such methods of treatment of sewage as to recommend that the sewage from a certain section of the New York area should be dealt with on these lines prior to discharge into the waters of the harbour. In the annual report of the Massachusetts State Board of Health for the year 1912 published at the end of 1913, is described an investigation by Clark and De M. Gage on the possibilities of the use of aëration for preliminary treatment of sewage prior to filtration. They found that simple aeration of sewage for twenty-four hours reduced the free and albuminoid ammonia to some extent, and that with sewage that was both aërated and seeded with green growths—*Protococcus* and *Scenedesmus*—the albuminoid ammonia was even more noticeably reduced. Later it was found that appreciable nitrification was obtained within twenty-four hours in the aërated sewage containing the green growths. Subsequently, Clark and Gage found that aëration for a much shorter period, in a tank containing slabs of slate about 1 in. apart, covered with a compact brown growth of sewage matters, was sufficient to coagulate the sewage colloids, and thus to produce a well clarified, non-nitrified effluent capable of satisfactory filtration at several times the normal rate.

"Later, Fowler and Mumford§ carried out experiments on the action in the presence of air of an organism designated 'M7' (isolated by Mumford from ponds receiving water discharged from a colliery), on sewage containing a certain proportion of iron salts. This organism has the property of precipitating the iron as ferric hydroxide from solutions of iron salts.

"In the paper referred to it is stated that sewage (in the presence of a certain quantity of iron salts) inoculated with this organism can be thoroughly clarified by six hours' aëration. The resultant effluent after settlement of the separated organic colloids was quite clear, and practically free from colloids. It is further stated that, although the ordinary methods of analysts failed to reveal the extent of the change effected by the above treatment, the effluent after aëration was always non-putrefactive on incubation, and could be readily oxidised and nitrified by filtration at a high rate.

"In quite a recent publication, Clark and Adams¶ give the results obtained during twelve

months' operation of the specially constructed tank used in these earlier experiments, previously referred to. It is shown that a rather better coagulation of the organic colloids and purification of the sewage generally can be obtained by means of aeration for a period of five hours under the conditions of experiment than is obtained by ordinary chemical precipitation, and at a considerably reduced cost. The effluent resulting from the aeration treatment has applied to it a much lower oxygen absorption value per day, with the production of a well nitrified and thoroughly stable nitrate.

In connection with the experiments carried out by Clark and his colleagues, it should be mentioned that the sewage treated was considerably more dilute than the majority of English sewages, as will be seen from the following average analytical results, taken from the paper quoted:

	Parts per 100,000.
Oxygen consumed	3·52
Free and saline ammonia	3·62
Albuminoid ammonia	0·57

The experiments of Clark, Gage and Adams, and Fowler and Mumford, show a marked advance on previous work; but it will be seen that in the case of the former investigators the idea of surface contact is retained, as evidenced by the construction of the aeration tank, and that in order to produce a nitrified and stable effluent further treatment in filters is still required.

With regard to the method of treatment suggested by Fowler and Mumford, while the clarification is effected in the absence of surface contacts, the questions of flocculation and the addition of iron salts are introduced, and the provision of filters for the rapid treatment of the clarified effluent remains.

"In a previous communication to this section of the society* in regard to the effect of the waste liquor from sulphate of ammonia plants on the oxidation of sewage, the present authors, in conjunction with Dr. Fowler, gave some results of the direct aeration of sewage. It was noted that while some coagulation of the colloid matter took place in the course of twenty-four hours' aeration, a period of several weeks elapsed before nitrification was complete. In November, 1912, Dr. Fowler visited the States in connection with the question of the pollution of the New York Harbour. Shortly after his return he described to the authors a research experiment which he had seen in progress at the Lawrence Experiment Station, Massachusetts, which evidently referred to the earlier work of Clark and his colleagues on the aëration of sewage in the presence of green organisms, as the bottle in which the sewage was aërated was coated inside with strands of algal growth. Dr. Fowler suggested that new work might with advantage be carried out on somewhat similar lines."

Following the above introduction, the paper contained a detailed account of a long series of experiments undertaken by the authors in regard to the question of the application of aëration methods in the purification of sewage.

It was found, for instance, that five weeks' continuous aëration was required in order completely to nitrify an average sample of Manchester sewage. If, however, the resultant solid matter was allowed to deposit, and the purified sewage removed by decantation and replaced by a further sample of crude sewage, complete nitrification of this second dose of sewage ensued within a reduced period of aëration. It was shown that accumulated deposit resulting from the continuous oxidation by prolonged aëration of successive quantities of sewage, which were termed "activated" sludge, had the property of enormously increasing the purification effected by the simple aëration of sewage.

The research, which was confined to laboratory experiments, included an investigation of the conditions controlling the oxidising effect of the "activated" sludge. It was established that, with suitable conditions, an entirely satisfactory effluent could be obtained when Manchester sewage, in intimate contact with one-fourth of its volume of "activated" sludge, was aerated (through plain pipes) for a period of six hours. Under the conditions of experiment, however, it was necessary to subject the "activated" sludge to a further intermediate period of aëration in order to maintain its highest activity.

* Fowler, Ardern and Lockett. Journal Society Chemical Industry, vol. xxxi., No. 10, 1912.

It is convenient to say at this point that there is believed to be no difference in principle between the reactions involved in this aëration process and in the best types of percolating filters. In the one case "activated" sludge is circulated in intimate contact with a body of sewage saturated with air, while in the other a thin film of sewage passes over an inert material coated with a more or less active slime. In the aëration process the action is intensified by a more intimate mixture of a greater proportion of sludge in a much more perfectly oxidised state.

While there obviously remains a great deal to learn in regard to the mechanism of the change taking place, it may be stated, generally, that there is an initial liquefaction of the unsettled sewage organic matters accompanied by an intensive fermentation of the carbonaceous matters, followed by a rapid nitrification of the ammonia.

The more recent Manchester experiments are described in a paper* presented to the Society of Chemical Industry on November 6th last. In this paper is given a description of larger-scale outdoor experiments on somewhat similar lines to the previous laboratory experiments.

It is satisfactory to note that the results obtained not only equalled, but easily surpassed those previously obtained in the laboratory. Effluents of much higher purity were obtained with a reduced period of aëration, and more important still the necessity of intermediate aeration or reactivation of the sludge was obviated, thus largely doing away with the need for sludge manipulation.

This advance was due mainly to the more effective distribution and consequent more intimate contact of the air with the mixture of sewage and sludge, effected by using air diffused through porous tiles as a means of aëration instead of blowing the air through plain pipes.

For the purpose of these outdoor experiments wooden casks of 50-gallons capacity were employed, and the aëration of the mixture of "activated" sludge and sewage was effected through a porous tile placed on the bottom of the cask. In general a proportion of 1 volume of "activated" sludge to 4 volumes of crude sewage was employed, and on the average the volume of free air used for aëration purposes did not exceed 15 cub. ft. per square foot tank area per hour.

In the following table are given the average results over a period of several weeks, by submitting Manchester sewage to a period of from four to six hours' aëration (in contact with 25 per cent activated sludge). At the end of the aëration period, one to two hours' settlement was allowed, and the purified effluent decanted off prior to the next charge of crude sewage.

OXIDATION OF MANCHESTER SEWAGE.

The effluents obtained throughout this series of experiments were extremely well clarified, and in general were superior to those yielded by the best type of bacterial filters.

Special attention may be drawn to the very low free ammonia content of the resultant effluents, and also to the small amount of dissolved oxygen absorbed by the shaken effluent in five days at 65 deg. Fahr. It will be remembered that the standard proposed by the Royal Commission on

agreement with the effluents obtained from Manchester sewage with a larger period of aëration.

From the first it has been acknowledged that a

ford experiments, and consequently it cannot be assumed that such results as those quoted above would be maintained when the air supply is reduced to a practicable amount. It is interesting to note also that experiments carried out by Messrs. Wakefield and Ward have shown that such a refrac-

torily purified on similar lines to those already

It will now be convenient to say a few words in regard to the character and composition of the

It differs entirely from the sludge resulting from the usual tank treatment of sewage, in that it is quite inoffensive and flocculent in character, and, despite its low specific gravity, readily separates from water or sewage. After prolonged settlement, however, the activated sludge rarely contains less than 95 per cent of water. A remarkable further separation of the water from the sludge can be readily obtained by treatment on fine-grade filters with the production of a sludge of the consistency of a stiff jelly.

In the following table are given the results of analysis of—(1) The Manchester "activated" sludge, and (2) the Salford "activated" sludge, taken from

	Activated Sewage dry	
	Manchester	Salford

The outstanding feature of the above analysis is the abnormally high percentage of nitrogen as compared with that present in the usual unoxidised tank sludge. This increase in nitrogen is in all probability

in the sewage. It is understood that the "activated"

[1] S. E. Melling. Journal Society Chemical Industry, [illegible] No. 2, 1914.

Returning to a general consideration of the conditions controlling the oxidation process, the Manchester

(1) That, for complete nitrification with a reasonable aëration period, a considerable portion of activated sludge should be employed—probably not less than

(2) That it is essential there should be intimate [illegible] sewage. It is therefore highly important that adequate means should be adopted for the removal of road detritus, grit, &c., from the sewage; otherwise there will be a tendency to form deposits on the floor of the aëration tank. Under such condition not only is a proportion of the active sludge removed from the sphere of action, but the accumulated banks of sludge are liable to give rise to certain secondary reactions inimical to the complete success of the oxidation process.

(3) That temperature is an important factor in the success of the aëration process. The purification is seriously diminished at temperatures constantly below 10 deg. Cent.; above this temperature satisfactory results can be maintained. It is advantageous, however, if a temperature approaching 20 deg. Cent. can be maintained, as under these conditions nitrification is greatly facilitated. In this connection it must be remembered that the Manchester and Salford results [illegible] previously were obtained during the summer and autumn months with entirely favourable temperature conditions. In the majority of cases maintenance of these excellent results during the winter months would doubtless require that the temperature of the sewage should be raised slightly by the use of warm air or by other means.

(4) It is necessary, in order that nitrification should proceed without hindrance, that the alkalinity or basicity of the sewage and sludge should be sufficient to account for the nitric acid resulting from nitrification of the ammonium salts. When employing a proportion of 1 volume of activated sludge to 4 volumes of sewage no difficulty has, however, arisen in this [illegible] either at Manchester or Salford. The oxidation process is essentially biological, and consequently care will have to be exercised when dealing with a sewage liable to contain excessive quantities of inhibitory trade effluents, especially as complete success [illegible] on the maintenance of the activity of the nitrifying organisms, which, unless thoroughly established, are very susceptible to adverse conditions.

It should be stated that the whole of the results described have been obtained by working aëration tanks on what may be termed the "fill-and-draw" method of working. Experiments carried out on a continuous-flow system have so far not met with the same success on account of certain engineering difficulties which obtained. Satisfactory progress with this method of working is dependent on the design of a tank in which these difficulties may be overcome.

As previously stated, a large amount of further re- [illegible] is required for a complete understanding of the purification changes. In addition to this need for further scientific research, there are several questions of urgent practical import requiring attention, chief among which may be mentioned:—

(1) The question of accelerating the rate of initial accumulation of activated sludge.

(2) The minimum amount of air essential to the proper working of the oxidation process.

Both these questions are at present receiving serious consideration. In regard to the former, the use of slurry or humus from percolating filters has been found advantageous. Experiments are in progress [illegible] that economy of air may be effected by accumulating partially activated sludge by the aëration of daily doses of sewage with final activation of the sludge thus accumulated, instead of proceeding to complete nitrification with each dose of sewage, as was the case in the earlier experiments.

With regard to the question of air supply, it would appear that the maximum volume need not exceed 15 cub. ft. of free air per square foot of tank area; but this question can only be settled by determinations under actual working conditions, and it is ob- [illegible] on the method of aëration employed and on the design of the aëration tank.

Having enumerated the points which may be con-

sidered established, and indicated the questions on which further information is required, some consideration may be given to the practical possibilities of the aeration process as compared with the present-day methods of sewage purification.

The advantages of this new method may be briefly summarised as follows:—

(1) Improved sanitary conditions, by reason of freedom from nuisance either from smell or offensive sludge, and the elimination of the fly trouble connected with certain types of filters.

(2) More perfectly oxidised effluents, saturated with dissolved oxygen and with an abnormally low free ammonia content.

(3) The production of a sludge which can be readily dealt with, and which, by reason of its high nitrogen content, is a valuable fertiliser.

(4) Greater freedom of choice of outfall site on account of the very considerable reduction in area of works required.

(5) Greatly reduced capital cost.

On the other hand the aëration process, being essentially a highly intensified bacterial action, will require closer scientific control than is demanded by the usual filtration areas.

With regard to the question of maintenance costs, it is scarcely possible at present to make a definite statement, especially as they are naturally dependent on the details concerned with the mechanical application of air on the large scale, which remain to be fully developed. On the basis of the volume of air employed in the Manchester experiments, the data available in regard to cost is such as to render it probable that the maintenance charges will not exceed the present cost of chemical treatment without making any allowance for the value of the resultant sludge.

In conclusion, the writer, in common with other investigators who have had the opportunity and privilege of undertaking this pioneer work, is convinced that the future development of the sewage problem lies in the direction of the experimental work herein described.

[A report of the discussion on the foregoing paper will appear next week.]

Road-making Tools for the Continent.—According to a *Times* despatch from Boulogne the extremely bad condition of the main roads has proved one of the greatest obstacles to the rapid advance of the Allies in Belgium and Northern France. Temporary repairs having been found to be of little service, it has been decided to remake the roads, and with this end in view orders have been sent to England for thousands of tons of spades, picks and wheelbarrows.

THINGS ONE WOULD LIKE TO KNOW.

(Contributed.)

What do the advocates of street tramways think, after the fiasco which was witnessed in London a few days ago, when hundreds of tramcars on both sides of the Thames were brought to a standstill owing to a power failure, and thousands of passengers were left stranded on the roads? Is it altogether comforting to reflect that, in a rigid system of street railway such a catastrophe may occur at any moment? And is not a remedy for this undesirable state of affairs to be found in the independent and mobile motor 'bus? Will not the London County Council now be obliged to reconsider their position, and withdraw the Bills they have in Parliament this Session for extensions of their tramway systems, instead of sinking more of the ratepayers' money in such out-of-date methods of locomotion?

* * * *

Has anyone in this country had an opportunity yet of seeing the latest American invention, the steam grave-digger? Is it a fact that this mechanical tool can dig about ten graves in the same time that it takes to dig one by manual labour? If so, will not the sexton soon be an official of the past? By the way, is it not rather a travesty that the inventor of this machine should claim, as an additional advantage, that it is an excellent implement for digging trenches in the battle-field?

* * * *

Why is it that at nearly all our English spas, and at many foreign watering-places which have become famous for the special attributes of their waters, the use of the natural waters is becoming less and less, and electric, chemical and other baths are taking their place? If this change continues much further, will it not be just as well to stop in London and indulge in any "fancy" bath one likes without the trouble and expense of going to one of the "celebrated" watering places?

* * * *

What do engineers in private practice think of the circular just issued by the Institution of Civil Engineers, strongly condemning the action of members of the institution who have lately responded to an advertisement of the Eastern Valley (Monmouthshire) Joint Sewerage Board inviting the submission of terms for certain professional engineering services? Is it not to be hoped that only very junior members of the profession responded to this advertisement? Is there not some slight excuse for their doing so, as otherwise how are they to get any work? Surely a brass plate on an office door in Westminster is not the only thing necessary to further one in the profession?

* * * *

When will our learned judges be able to make up their minds as to what is a sewer and what is a drain? Was it not a grievous pity that even this simple problem was further obscured by the introduction of the "combined drain"? Do not the same remarks also apply to the determination of the much-fought question as to whether a gully is part of the sewer or part of the road? Have there not been yards of legal arguments, discussions, and judgments on the above matters with, at present, no very definite conclusions reached?

* * * *

Is not the Army Council to be congratulated on its choice of its additional civilian member? Is not Sir George Gibb just the very man for the post, and will not his experience and judgment be of the greatest help to the council in solving the numerous intricate problems which constantly beset their path? And may we not hope that there will now be a general "speeding up" of some of their actions?

* * * *

Was it not rather remarkable that, while your contributor was penning his question as to whether £120 a year was not a rather paltry minimum salary for a professional man acting as surveyor of a town, the enlightened Llanybyther Rural District Council were deciding that £45 a year was ample salary for *their* surveyor?

Law Notes.

EDITED BY H. HEWITT CONDER, 37 Moorgate street, E.C., Solicitor of the Supreme Court

The Editor will be pleased to answer any questions affecting the practice of engineers and surveyors to local authorities. Queries which should be written legibly on foolscap paper, on one side only, and should be addressed to "The Law Editor," at the office of THE SURVEYOR, accompanied by the writer's name and address. All correspondents who do not wish their names to be published should also furnish a "nom de plume." Where necessary, copies of local Acts or documents referred to should be enclosed. All explanatory diagrams must be drawn and lettered in BLACK INK only, and in such style as to be fit for direct reproduction i.e., without re-drawing or amendment. Unless these conditions are complied with we cannot undertake to reply to queries.

FUEL AND ELECTRICITY PROTECTION ACT, 1896: NEGLIGENCE IN EXECUTION OF CONTRACT.—An important [illegible] Public Authorities Protection Act, 1893, has been [illegible] by the Court of Appeal in *Myers* v. [illegible] (London Gazette, October 2nd). By a special Act of 1871 the corporation were authorised to make, store and supply gas, and to sell, manufacture and dispose of coke and other matters, the products of the coal and other materials employed in the manufacture of such gas in such a manner as they might think fit. The plaintiff ordered a ton of coke from the corporation, and their men, in the course of delivering the coke, negligently tipped some of it through the plaintiff's shop window instead of down the coal-hole. More than six months afterwards the plaintiff commenced this action in the County Court, claiming damages for negligence. The corporation pleaded the Act, and the County Court Judge decided in their favour. The plaintiff appealed to the Divisional Court, the appeal being heard by Mr. Justice Lush and Mr. Justice Bray, who differed in opinion. Mr. Justice Lush held that, as the corporation, acting within their statutory powers, had undertaken obligations to a particular individual, and in the course of discharging these obligations had been guilty of negligence by their servant, the case was not one in which they were acting directly in the execution of a public duty, and consequently they were not protected by the provisions of the Act. Mr. Justice Bray, on the other hand, held that, in the sale and delivery of the coke, the corporation were executing a public duty, and that being so they were protected by the statute. The Court of Appeal agreed with Mr. Justice Lush, and allowed the plaintiff's appeal. Lord Justice Buckley, in the course of his judgment, said that the contract to supply the plaintiff with coke was a voluntary contract for the breach of which the plaintiff could not have brought an action based on a breach of a statutory duty owed to him as a ratepayer. If, therefore, in the performance of this contract with the plaintiff as an individual, and not as a member of the public, they were negligent, the privilege claimed did not apply, and the plaintiff was not required to commence proceedings within six months. The appeal was dismissed with costs.

ELECTRIC SUPPLY: CHARGES: UNDUE PREFERENCE.—An important point under the Electric Lighting Act, 1882, was decided in *Attorney-General at the Relation of the Lea and Eatwa Gas Company* v. *Leng Eatwa Urban District Council* (Court of Appeal, October 29th). By sec. 19 of the Act, where electricity is supplied in any part of an area for private purposes, then (except as otherwise provided by the licence, order, or special Act authorising the supply) every company or person within that part of the area is to be entitled to a supply on the same terms as any other company or person. By sec. 20 the undertakers are not to show any preference to any local authority, company or person. The council were authorised to supply electricity by a special Act, which contained nothing varying the above provisions. Up to January 1, 1912, they made the following charges: For lighting, 3d. per Board of Trade unit per quarter for the first 2,000 units, and 2d. per unit afterwards; for power, 1d. per unit per quarter for a supply exceeding 4,000 and not exceeding 6,000 units, and afterwards 2d. per unit. On September 25, 1911, the council issued a circular giving notice of their intention to alter these charges by increasing the charge for power to consumers who took power only, or power and partial lighting, the charge for power remaining unaltered for those who took both power and all their light from the council. The case was tried by Mr. Justice Sargant, who held that the council had failed to discharge the onus of proof that this preference was justified under secs. 19 and 20 of the Act of 1882. This decision the Court of Appeal affirmed.

QUERIES AND REPLIES.

In order to avoid confusion querists are requested to use distinctive words as nome de plume. The letter X, combinations such as X.Y.Z., and words such as "engineer" and "surveyor," should never be used.

ABATEMENT OF NUISANCES IN URGENT CASES.—"Yeovil" writes: My council have had considerable trouble in connection with the chokage of combined drains, and at its last meeting it was suggested that the surveyor, in case of emergency, could take steps to have the combined drains relieved after written notice without waiting to receive instructions from the council. I shall be much obliged if you will kindly advise as to what power the council has, in addition to the powers conferred by secs. 41 and 94 of the Public Health Act, 1875, to enforce the abatement of nuisances in case of emergency by doing the work themselves or otherwise, and the mode of procedure to be adopted. As far as I can see, sec. 41 of the Public Health Act, 1875, only provides for the examination of drains on written complaint of nuisance, and the service of notice after receiving instructions from the council; but my council suggested that the surveyor has power under the Public Health Acts to have the drain relieved on his own initiative—i.e., without waiting, in case of emergency, for instructions from them. Part III. (only) of the Public Health Amendment Act, 1890, has been adopted. I shall be much obliged if you will favour me with your valuable advice and comments on the case as stated.

There do not appear to be any powers for dealing with nuisances in drains, except those contained in secs. 41 and 94 of the Public Health Act, 1875, sec. 19 of the Public Health Acts Amendment Act, 1890 (applicable to "single private drains"), and secs. 34 and 35 of the Public Health Acts Amendment Act, 1907 (which are only applicable in districts in which they have been applied). There is nothing in any of these provisions authorising the surveyor either to give notice or to do the necessary work on his own initiative without the express authority of the council. In case of emergency the council can empower the surveyor to enter and examine the drain without notice, but the work cannot be done by the council until notice has been given to the owner or occupier, and he has made default in doing it, except where the person causing the nuisance cannot be found, and it is clear that the nuisance does not arise or continue by the act, default, or sufferance of the owner or occupier. It must be borne in mind, moreover, that it is not every combined drain that is a "single private drain" within the meaning of the Act of 1890. See *Wood Green Urban District Council* v. *Joseph* (1907, 1 K.B., 182.) A combined drain which is not a "single private drain" is a sewer repairable by the local authority.

SURVEYOR TO URBAN DISTRICT COUNCIL: EXTRA REMUNERATION.—"Watkin" writes: The council are desirous of making a payment to me for the preparation of plans, specifications, and quantities in connection with a housing scheme. Please state the various ways in which such payment may legally be made.

There is no provision authorising the making of an extraordinary payment—i.e., one in addition to salary—to a surveyor to an urban district council. The Local Government Board have suggested in some cases whether the object might not be attained by an increase of salary for a specified period, pointing out that in this case the period must be prospective—i.e., must commence not sooner than the date of the resolution of the council awarding such increase (Lumley's "Public Health Acts," 8th edition, p. 451). In *Regina* v. *Gloucester Corporation* (23 J.P., 709), however, the Court held that a payment of £100 to the surveyor of a local board, for extra services as an engineer, was legal. If the work has not yet been done, the safer method of carrying out the matter would be by an increase of salary for a specified period. Whichever course is adopted, it would be advisable to apply to the Local Government Board for their approval beforehand.

We have to draw the attention of querists to the directions laid down for their guidance in regard to the preparation of diagrams. Rough sketches obviously cannot be made use of, and we should be obliged if correspondents would therefore send only carefully-prepared drawings, preferably about 6 in. in width, and without colouring or wash of any description. Failure to observe these rules will involve the risk of queries remaining unanswered.

Assistants' and Students' Section.

CONDUCTED BY SYDNEY G. TURNER, ASSOC.M.INST.C.E.

All communications in regard to this page must be addressed to The Editor, St. Bride's House, 24 Bride-lane, Fleet-street, E.C. *Envelopes must be marked "Assistants' Section" in the top left-hand corner. Correspondents are invited to submit questions for consideration and answers to the questions which appear. For the contributions considered to be the most meritorious, one or more premiums in books will be awarded monthly. Diagrams must be drawn to scale on separate sheets, ready for reproduction.*

THE MONTHLY PREMIUM.

For [illegible] during [illegible] have been chosen [illegible] accepted [illegible] November by Mr. W. R. Hewlett, [illegible] Geology in Structure and Stratigraphy," by Arthur Meade; published by Longmans & Co.; and by Mr. Bernard Keating, "Practical Design of Reinforced Concrete Beams and Columns" and "Structural Iron and Steel," by W. Noble Twelvetrees; published by Whittaker & Co.

QUESTIONS.

This week answers are invited to the following questions:

445. Cement Testing. Sketch and describe the apparatus necessary for conducting the tensile, weight and specific gravity tests for Portland cement.

446. Materials. What is Mexican bitumen? Is it a natural product like the Trinidad Lake bitumen or is it obtained as a by-product of petroleum refining? If the former, what part of Mexico does it come from? (H. F. W., *Tottenham*.)

447. Geodesy. Explain how the length of a measured base may be checked by triangulation. What is meant by a base of verification?

448. Hydraulics. Explain and illustrate by reference to a stream of rectangular section, 12 ft. wide and 3 ft. deep, the term "hydraulic mean depth"; and state in what manner and approximately to what extent the mean velocity of the stream would be affected by widening it to 24 ft., assuming the depth and inclination to remain the same. (A.M.I.C.E.)

449. Roof Truss. Sketch a light iron roof truss for a span of 20 ft., and give enlarged details of the joints.

[The Editor is at all times glad to hear from readers who desire to submit questions regarding matters of general interest, points of daily practice, &c., for insertion in the "Assistants' and Students' Section." Questions which are published are taken into consideration, as well as other matter, in awarding the Monthly Premium.]

REPLIES TO QUESTIONS.

442. Building Materials. What are encaustic tiles, and how are they made?

The following description of encaustic tiles and their manufacture is taken from Rivington's "Notes on Building Construction," Vol. III., p. 141: Encaustic tiles are those in which the colour is produced by substances mixed with clay—not printed on after the tile is made. Such tiles may be made from ordinary clays and marls, carefully prepared, sometimes mixed with finer clays, and also with different colouring substances, such as manganese for black, cobalt for blue. Those tiles which are ornamented by inlaid patterns of different colours are made in the following manner: The clay used is first very carefully prepared, mixed with the colouring matter, and "slipped"—that is, passed through fine muslin or silk sieves; boiled in the slip-kiln until it becomes plastic, wedged—that is, cut up into pieces—which are dashed against one another to drive out the air and consolidate them; and [illegible] for several months during which fermentation goes on and organic matters disappear. During this time the wedging should be repeated at intervals. After this the clay is [illegible] cut up by means of a wire into long pieces—which are kept always in the same direction. This consolidates the mass and preserves the grain. Each tile generally consists of three layers—the face, which is a slab of very pure clay of the colour required for the ground of the pattern; the body, which is of coarser clay; and the back, to prevent warping, which is formed with a thin layer of clay different from the body. The clay for the face is cut into a pat about ¼ in. thick, and as much larger in area as will allow for contraction in burning. It is then placed upon a plaster-of-Paris slab, upon which the form of the inlaid pattern is left in relief. The face clay pressing upon this receives an indentation corresponding to the form of the pattern required. It is then backed up with the body of the coarser clay, and the thin layer to form the back. At this stage the maker's name is stamped on the back, and also a few holes to make the cement adhere to the tile when it is set. Slip clay of the different colours required, according to the design, is then poured into the different parts of the indented pattern on the face. After this has become hard the superfluous clay is carefully scraped off, leaving it only in the parts originally indented so as to form the pattern. The raw clay tiles are then trimmed, carefully dried, baked in ovens, protected from smoke, &c., by being arranged in large fireclay jars, called seggars. The burnt tiles may then, if required, be glazed by dipping them into a mixture of powdered glass and water, and reheating. Inferior Encaustic Tiles.—A class of pseudo-encaustic tiles is now being largely made, in which the colour, which should be burnt in along with the clay, is merely applied as a transfer printed pattern on the surface. Such tiles are frequently coated in the glass oven with a transparent fritted glaze, and serve for flower-boxes, wall tiles, and such like purposes. To give them the appearance of having true inlaid colours, the edges of these tiles have frequently a little colour applied to them to represent the depth of the insertion of the coloured clay. (Stato.)

443. Vectors. What are vector quantities? Explain how they may be added together graphically.

Certain quantities, such as the weight of a body, a sum of money, the energy of a body, can be denoted by mere numbers which represent their magnitudes in suitable units. For example, a body may weigh 5 lb., a sum of money may be £100, and such quantities are called *scalars*. In contradistinction to such quantities there are certain magnitudes which involve the idea of direction as well, and cannot, therefore, be completely defined by numbers. At the same time the direction must also be stated, for if the magnitude only is given the quantity is not completely specified. All such quantities are called *vector quantities*. Examples of these are found in the conception of velocity or force. A *vector quantity* may be represented by a straight line, which is called a *vector*. The length of the vector represents to a suitable scale the magnitude of the quantity, and the direction of the line its direction. Thus, a line AB (Fig. 1) represents a vector quantity whose magnitude is the length AB, to a certain

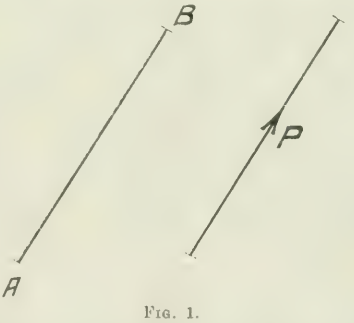

FIG. 1.

BA. This distinction is the *sense* of the direction, by placing an arrow-head on the vector. Another way of showing a vector is shown in Fig. 1, in which

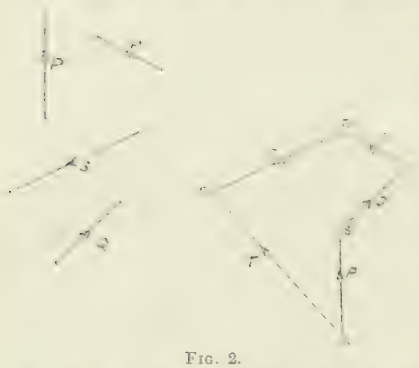

Fig. 2.

It should be noted that it is quite immaterial in what order we take the vectors in performing the addition. The vector T is also called the *resultant vector*, and the polygon ABCDEA is called a *vector polygon*. In adding together two vectors, the resultant vector forms the closing side of a triangle, or the diagonal of a parallelogram, as with the triangle of forces and parallelogram of forces. (T. W. P.,

Note.—Replies to Question 444 will be published in our next issue.—Ed.

PRO PATRIA.

[FIFTEENTH LIST.]

We present herewith the fifteenth list of municipal engineering and sanitary officials who are taking part in the war, and shall be glad to hear of other cases within the knowledge of our readers.

Forbes, A., county road surveyor, Dunfermline District, Fife County Council, 10th Battalion, Royal Scots.

Marlow, G. E., surveyor to the Desborough Urban District Council, Northants Yeomanry (Territorials).

Morgan, Archibald Percy, shorthand clerk, borough surveyor's department, Gillingham, corporal, Royal Engineers Motor-cycle Corps, drafted to the 17th Signal Company.

Negus, F. H., sanitary surveyor to the Meriden Rural

Two deputy inspectors of the Thames Conservancy, Messrs. T. Hawes and C. T. C. Barker, have had their offers to serve the Crown as navigation officers accepted, and have each been given a commission. The board on Monday agreed to allow them full pay while employed by the Admiralty, on the ground that such commissions involved exceptional expenses. The board's decision as to employees generally was, it may be recalled, to pay full wages less the Government allowances.

Wearmouth Bridge.—The Sunderland Corporation on Wednesday agreed to promote a Bill in the present Session of Parliament authorising the reconstruction of Wearmouth Bridge.

LOCAL GOVERNMENT BOARD INQUIRIES.

The Editor invites the co-operation of Surveyor *readers with a view to making the information given under this head as complete and accurate as possible.*

INQUIRIES HELD.

Andover T.C. (December 2nd. Mr. F. O. Stanford). [illegible] in respect of excess expenditure [illegible] and sole [illegible] [illegible] The inspector pointed out that on the [illegible] application for loans the Local Government Board applied [illegible] the expenditure to an equal amount of current account which was a rather large one [illegible] they were asking for now. If [illegible] these amounts had been paid from current account, or else deduct them from the present application. They had not been paid, and so it left nothing for them to borrow. The town clerk said they could not pay it out of revenue, and if the Local Government Board could not help them he did not know how the contractors would get their money. Mr. M. Taylor (engineer) informed the inspector that the corporation had been hit in a very hard way. They were thrust into a law action, and the Local Government Board were very severe upon the corporation in the terms under which they sanctioned the loan for the last work, [illegible] placed the corporation in a very difficult position. All that expenditure had been incurred in order to satisfy riparian owners who were bringing actions against the council, and the work had to be done. The borough surveyor, Mr. R. W. Knapp, stated, with respect to the second application, that it was proposed to take out the old ruined 9-in. surface-water drain and substitute pipes of 15 in. and 18 in.

Cardiff T.C. (December 15th. Mr. Edgar Dudley).—This was an inquiry into the application of the corporation for a Provisional Order giving compulsory powers to acquire the necessary land and property for the widening of Duke-street, through which it is proposed to lay a tram track.—The city engineer, Mr. W. Harpur, said he estimated the total cost of the property at £130,419, and the cost of the works at £2,500. The value of the surplus land which the council would acquire he estimated at £47,250. This, it was explained, would reduce the cost to under £100,000—viz., about £85,750. Mr. Harpur presented a census of the traffic in Duke-street during the last week, showing the congestion in that thoroughfare. It was the narrowest link in the long chain of roads stretching from London to Milford.

Chorley T.C. (December 2nd. Mr. Edgar Dudley).—£3,250 for the purchase of property for the construction of a new street from Devonshire-road to St. [illegible] It was explained that the proposed loan was required for the purchase of trust property for the purpose of the improvement.

Chorleywood U.D.C. (December 3rd. Mr. F. O. Stanford).—£3,875 for road making, and £200 for the purchase of land for the purpose of a soakaway.—The surveyor, Mr. W. H. Scott, stated that the length of roads it was proposed to make up was—Lower-road, 1,500 ft.; South-road, 1,146 ft.; Station-road, 960 ft.; in all, 3,306 ft.

Hartismere R.D.C. (December 15th. Mr. A. W. Brightmore).—£128 for sinking a well at Palgrave.—In the course of the proceedings the inspector stated that expenditure upon such matters was generally brought before the notice of the board before it was incurred, to which the clerk, Mr. Harold Warnes, replied that after the work was commenced the council found they could borrow for that purpose, and had done so in respect of other parishes. Giving details of the expenditure, Mr. Warnes stated the work was carried out by Mr. Smith, of Fingringhoe, the boring costing £103, the pump and fixing £22, while other expenses brought up the total to £127. The site, it was stated, belonged to the council.

Leek U.D.C. (December 9th. Mr. M. K. North).—£3,660 for laying out of Brough Park.—The engineer, Mr. W. E. Beacham, said it was proposed to lay out Brough Park, an open space of 10a. 1r. 17½p., recently presented to the town by Mr. N. S. Brough. The estimate included the following works: Boundary fences, £793; laying out walks, &c., £862; laying down bowling green, £308; shelter pavilion, with conveniences, £440; greenhouse, £20; bandstand and area surrounding, £417; swings, £50; small shelter, £50; seats, £40; shrubs and planting, £200; and the

[illegible] approved [illegible] drainage of [illegible] £48. [illegible] was given in support of the [illegible] and [illegible] [illegible] [illegible]

Municipal Work in Progress and Projected.

The Editor invites the co-operation of SURVEYOR *readers with a view to making information given under this head as complete and accurate as possible.*

The following are among the more important projected works, of which particulars appear below: Buildings—Birmingham, Ealing, Glasgow, Lanarkshire, Nottingham; housing and town planning—Newcastle-upon-Tyne; refuse disposal—Bilston; roads and materials—Lewisham, St. Columb, Teddington, Tilbury; sewerage and sewage disposal—Chipping Norton, Rugby; water, gas and electricity—Greenock, Warrington. Particulars of other works projected will be found in our Local Government Board Inquiries pages.

BUILDINGS.

Birmingham T.C.—The Sites and Buildings Sub-committee recommend the Birmingham Education Committee to approve of plans for submission to the city council for the erection of a new council school at Hall Green. The total cost of the school is estimated at £15,000, plus £900 for furniture and fitting. The accommodation will be for 1,000 children.

Blackburn T.C.—Plans have been submitted to the council for a crematorium with space for sixty bodies.

Bridgnorth T.C.—The council have approved the plans of the borough surveyor, Mr. E. Trevor, for alterations to the council chamber.

Cheltenham T.C.—It has been resolved to build a smallpox hospital at an estimated cost of £1,000.

Dundee T.C.—Ashludie House is to be converted into a sanatorium at an estimated cost of £2,925.

Ealing T.C.—The borough surveyor, Mr. W. R. Hicks, has been instructed to prepare modified plans for a public clock at a cost not exceeding £3,000.

Eccles T.C.—A decision has been reached to build a new fire station.

Failsworth U.D.C.—The council have adopted plans for the proposed public baths.

Glasgow T.C.—The city council have received a report from the Improvements Committee on the competitive plans sent in for the buildings to be erected at the corner of Trongate and High-street in connection with the reconstruction of Glasgow Cross. The examiners placed first and selected for the first premium of £50 or for execution the design numbered 18, second the design numbered 14, and third that numbered 12, and recommended that the premiums of £30 and £20 respectively be paid to the authors of the two last mentioned. The plan of No. 18, they stated, was so arranged as to work in satisfactorily with the buildings already erected on each side. The scheme adopted for the retention of the cross steeple and its support in the isolated position it would occupy was both sound structurally and of excellent effect architecturally, while the proposed cross is also successfully treated in the traditional manner. The cost of the scheme is estimated at £28,512, including £2,500 for the cross and steeple. On the sealed envelopes being opened, the awards were announced as follows: (1) No. 18, Honeyman & Keppie, 257 West George-street; (2) No. 14, John M'Kissack & Son, 68 West Regent-street, Glasgow, and William Friskin, Kensington Park-road, London; and (3) No. 12, Alexander D. Hislop, 124 St. Vincent-street, Glasgow. The council agreed to the recommendation of the committee that the author of the design placed first be employed as architect of the buildings.

Lanarkshire C.C.—It has been decided to erect a new police and fire station at Bishopriggs, at an estimated cost of £7,100.

Leeds T.C.—A garage for trackless cars is to be erected in the vicinity of Worral-street.

Northampton T.C.—Plans have been prepared and are under consideration for the extension of the hospital at Harborough-road, at an estimated cost of £2,270.

Nottingham T.C.—Plans for a new school at Forest Fields have been approved. The estimated cost is £6,800.

Oldham T.C.—The general manager of the tramways has received instructions to report on the advisability of erecting shelters at Rhode Bank and Grains Bar.

Rothwell U.D.C.—The surveyor, Mr. A. Harris, has received instructions to prepare plans for the extension of the municipal offices.

Sheffield T.C.—A scheme has been approved for the extension of the Grosvenor-road public baths at an estimated cost of £2,600.

Stames R.D.C.—Plans have been approved for a smallpox hospital in High Tree-lane.

Tyrone C.C.—A scheme has been approved for the erection of a sanatorium for twenty-eight beds, and for the building of a residence for the tuberculosis officer, at an estimated cost of £4,350.

Widnes T.C.—The Health Committee recommend the council to apply for a loan of £2,250 for a tuberculosis pavilion.

HOUSING AND TOWN PLANNING.

Ayr T.C.—The Housing Committee have received instructions to report on suitable sites for working-class houses, and the burgh surveyor is to prepare plans and estimates of houses of room and kitchen with scullery and single apartment with scullery.

Birkenhead T.C.—A scheme for the provision of workmen's houses is to be carried out on the Gilbrook estate.

Carlisle T.C.—The borough surveyor, Mr. H. C. Marks, has received instructions to prepare plans for the erection of twelve working-class houses in different parts of the town.

Clydebank T.C.—For the purpose of a housing scheme the Streets and Buildings Committee recommend the purchase by the council of 12 acres of ground on the east side of Kilbowie-road, at the cost of £400 per acre, free of all burdens, including tenants' claims. It was also decided to delay further consideration of the offer of ground on the west side of the road.

Falmouth T.C.—The council have approved the plans of the borough surveyor, Mr. J. S. Walton, for erecting workmen's dwellings on a portion of the Penwerris site.

Kirkintilloch T.C.—The plans of one and two roomed houses which had been prepared have been referred back to the burgh surveyor with an instruction to produce a cheaper scheme for single tenement apartment houses. The Gas Committee reported on a proposal to build workmen's houses at the gasworks. It had been found that a room and kitchen house with bath-room and scullery could not be let for less than £21, and the two-room and kitchen houses at less than £25, assuming a rate of interest of 4 per cent and repayment spread over sixty years. In the circumstances the committee did not see their way to make any recommendation in the matter.

Lichfield T.C.—A scheme has been adopted for the erection of twenty workmen's dwellings on a site on Beacon Hill. It is proposed to build the houses in four blocks, two blocks containing six cottages each, the other blocks to contain four cottages each. There will be ornamental forecourts and large gardens at the rear, and the cottages are to be let at 5s. a week. The total cost is estimated at £4,100, including the construction of a new street along the frontage.

Newcastle-upon-Tyne T.C.—The Housing Committee recommend the council to utilise a piece of land at Walker, containing an area of 25¼ acres, in order to erect 600 houses, with gardens attached, of six types of dwellings.

Norwich T.C.—Tenders are to be obtained for the erection of houses for the working-classes at Starling-road. The city engineer, Mr. A. E. Collins, stated that the plans comprised sixteen self-contained houses and eight flats. The council agreed to the scheme in order to give the greatest possible amount of accommodation to families at the lowest possible cost.

Poplar B.C.—The Public Health Committee report that the Local Government Board have decided to accept the scheme of the London County Council for rehousing persons to be displaced by school exten-

cost schemes in Poplar, on the sites in possession of the council, at Tunnel-avenue, East Greenwich.

Warmley R.D.C.—It has been agreed to purchase 61 acres of land for £700 for the Bitton housing scheme, and the sanitary surveyor, Mr. H. M. Bennett, has been instructed to submit plans for eight houses.

PARKS AND OPEN SPACES.

Goole T.C.—A scheme has been approved for laying out the Hooknook recreation ground.

Plymouth T.C.—The Hoe and Parks Committee have been instructed to consider the question of a public park or recreation ground in or near the Mount Pleasant Ward.

REFUSE COLLECTION AND DISPOSAL.

Bilston U.D.C.—The surveyor, Mr. Vincent Turner, has been instructed to prepare plans and estimates of a destructor suitable for the requirements of the district.

ROADS AND MATERIALS.

Bilston U.D.C.—The council made an application to the Local Government Board for sanction to borrow the sum of £13,773 towards the cost of the Holyhead-road improvement. The total estimated cost of the scheme is £20,101, and towards this amount the Road Board have promised a grant of £5,250, and the Staffs. County Council £250.

Cheriton U.D.C.—Private street works are to be carried out in Kent-road at a cost of £450.

Chester R.D.C.—The council have convened a conference with neighbouring authorities and the county surveyor on the subject of constructing a new road from Ellesmere Port to Helsby, by way of Thornton-le-Moors.

Ely R.D.C.—Progress is being made with the negotiations for the construction of a new road from Stretham to Dimock's Cote. The authorities concerned are the Cambs and Isle of Ely County Councils, the South Level Commissioners, and the Road Board. The scheme includes the proposed construction of a bridge over the river.

Haddington C.C.—The Western District Committee have agreed to purchase a boiler for the tar-mixing machine at a cost of £84.

Heysham U.D.C.—A scheme has been approved for the widening of Heysham-road.

Honiton T.C.—The borough surveyor, Mr. A. Tillotson, reported recently that the tar-spraying of the roads during the season had been completed with a considerable saving as compared with previous years. The reduction was undoubtedly brought about by the employment of the council's own workmen and apparatus.

Lewisham B.C.—The council have agreed to an improvement scheme in Sandhurst-road, including laying down tar-macadam, at an estimated cost of £1,267.

Newton R.D.C.—It has been agreed as an experiment to contract only for the supply of stone for six sections of the district roads, and employ a man in each section, at 22s. per week, to spread stone and clear drains. It was stated that more damage was being done now by water running over the roads than was done by traffic.

Penzance T.C.—It has been decided to apply to the Local Government Board for an Order declaring sec. 17 of the Public Health Acts Amendment Act, 1907, to be in force in the district of the urban district council, and that the Highways Committee consider and negotiate for a new road round Lescudjack Hill.

Ripon R.D.C.—The surveyor, Mr. J. W. Plewes, reports that there is a prospect of obtaining a grant from the Road Board in aid of the Markington-road and Fountain-road improvement, the estimated cost of which is £623.

St. Columb R.D.C.—A sub-committee is engaged in preparing a scheme for a new road 2¼ miles in length from Wadebridge to Ruthern Bridge.

Stirlingshire C.C.—It has been agreed to carry out a road improvement scheme at an estimated cost of £2,420.

Teddington U.D.C.—Mr. M. Hainsworth, the surveyor, has been asked to prepare an estimate of the cost of substituting creosoted deal for asphalt for the margins of Kingston-road. The cost will be borne as to one-third by the Road Board, and two-thirds by the Middlesex County Council.

Tilbury U.D.C.—The surveyor's staff are engaged on the improvement of roads leading from Tilbury Fort, for military purposes. This work comprises the strengthening of existing foundations, widening, and metalling the surface. The cost will be approximately £4,000. The entire cost of the South Ward section and 75 per cent of the cost of the North Ward section is to be borne by the Road Board in relief of the War Department. Mr. H. P. Mayoury, M.INST.C.E., manager and engineer to the Road Board, has written the council's engineer asking that the works be completed as expeditiously as possible.

Towyn U.D.C.—The Road Board have notified their willingness to give grants of 75 per cent of the cost of road improvement schemes, estimated at £731, to provide work for relief of unemployment arising out of the war in Towyn and Aberdovey district. The urban council have made arrangements to submit a list of the men unemployed, and the schemes are ready to be carried out.

Youghal U.D.C.—A scheme is to be carried out for widening the main road from Cork to Waterford at an estimated cost of £3,000.

SEWERAGE AND SEWAGE DISPOSAL.

Belper R.D.C.—The surveyor, Mr. R. C. Gordon, reports that the estimated cost of the drainage scheme for the Smithy Houses portion of Denby was £236. With respect to Horsley Woodhouse, it was considered locally that nothing short of a comprehensive scheme of sewerage and sewage disposal would modify the present unsatisfactory condition of affairs.

Birstall U.D.C.—It has been agreed to carry out sewer extensions at a cost of £420.

Bolsover U.D.C.—The council have confirmed the recommendation of the Sanitary Committee for the adoption of the water-carriage system on sixty-five properties.

Chipping Norton T.C.—The contract has now been signed between the corporation and Messrs. Rowell & Sons, contractors, Chipping Norton, for carrying out the extensions to the sewerage and sewage disposal works in accordance with the scheme prepared by Messrs. Berrington, Son & Watney. Messrs. Rowell & Sons' tender for the work is £9,088.

Doncaster R.D.C.—The council have succeeded in obtaining a site for the sewage outfall works at Barnburgh.

Emley (Yorks) U.D.C.—The surveyor, Mr. S. Gill, has been instructed to prepare a scheme for improvements at the sewage beds.

Flaxton R.D.C.—It has been resolved to carry out a sewerage scheme at Heworth Without, at an estimated cost of £648.

Newquay U.D.C.—Subject to sanction of the Local Government Board, the tender of Mr. Horace Clemens has been accepted for the construction of a tunnel sewer in Central-square and Fore-street, at £543, and the construction of 15-in. and 12-in. sewers in Crantock-street, for £356; Messrs. Murrin & Pengelley for a 12-in. sewer in Tower-road, at £254; a 12-in. sewer in Bank-street and Beachfield-avenue, at £261; a 12-in. sewer in Station-road, and Tolcarne-road, and Edgcumbe-avenue, at £635.

Rugby R.D.C.—The sewerage scheme for New Bilton, which the council have resolved to carry out, will, it is estimated, cost £3,200.

South Westmorland R.D.C.—A scheme of sewerage for Haversham is receiving the consideration of a special committee.

Wokingham R.D.C.—Consideration is being given to a drainage scheme for Crowthorne.

WATER, GAS, AND ELECTRICITY.

Axminster R.D.C.—The plans for the building of a new reservoir at Axminster have been forwarded to the Local Government Board for their approval, with a request for sanction to borrow £1,515.

Barrow-in-Furness T.C.—It has been decided to arrange the town into separate water areas, in each of which a waste-detecting meter will be installed. It has also been agreed to provide additional sluice valves.

Belfast T.C.—A resolution has been passed by the

council a committee calling for a reorganisation of the engineering department.

Brampton R.D.C. It is proposed to provide a water supply for Carlatton at an estimated cost of £3,000.

Burry Port U.D.C. It has been agreed to carry out a scheme of sewerage.

Dumbarton T.C.—The council have agreed to extend the gasworks at an estimated cost of £4,000.

Greenock T.C.—The Electricity Committee propose that application should be made to the Secretary for Scotland for power to borrow £30,000 to enable them to meet the increasing requirements of the department. It is expected that there will be extensions of the supplies to local public works and to Port Glasgow.

Holywell U.D.C.—The council have decided that the sewer and draining scheme for which the Local Government Board have sanctioned a loan of £14,000, shall not be proceeded with until a favourable opportunity arises, which, it is understood, will not be until after the war has been concluded.

Lostwithiel T.C.—It is announced that the gas company have agreed to the principle of paying for gas for public lighting as ascertained by meters. The new contract commencing on January 1st would be for a term of three years.

Teddington U.D.C.—Fifteen tenders received for installing electric light at the sewage disposal works have been referred to the engineers for report.

Torquay T.C.—Subject to loans being obtained, the council have agreed to accept the tender of Mr. H. Duke, of Plymouth, at £1,457, for laying the new water main from Hennock to Knighton Heath; that of Messrs. Fothergill Brothers, Exeter, at £1,712, for laying the new main from Knighton Heath to Sandford Orleigh; and that of the Stanton Iron Company, Nottingham, at £12,821, for the main from Hennock to Sandford Orleigh.

Uttoxeter R.D.C.—It has been resolved to make application to the Duchy of Lancaster to provide an improved water supply for Draycott-in-the-Clay.

Warrington T.C.—Consideration is being given to a scheme for the improvement of the water supply at an estimated cost of £10,000.

MISCELLANEOUS.

Leiston U.D.C.—The council have approved the estimate of the surveyor, Mr. C. F. Brown, at £304, for the fencing of the new cemetery.

Saltburn U.D.C.—The surveyor, Mr. Joseph Draper, has been authorised to make inquiries as to the cost of a second-hand pump for the brine baths.

Southwold T.C.—Various schemes were recently brought forward with a view to dealing with unemployment by a committee appointed for that purpose. After a prolonged discussion it was decided that the surveyor, Mr. J. S. Hurst, should prepare estimates for the work.

Surbiton U.D.C.—Owing to the many calls made by the war on the pockets of the residents, the men employed in the highway department have decided not to follow their usual practice of soliciting subscriptions for Christmas fare for themselves. Further, a balance of £3 on this fund has been given to the Surbiton War Relief Fund. High praise is due to the men for their generous self-denial.

Teddington U.D.C.—On Monday the tender of Messrs. Merryweather & Sons was accepted for the purchase, for £1,070, of a Merryweather patent "Hatfield" pattern motor fire engine, with a 50-ft. wheeled escape attached and first apparatus, and the surveyor, Mr. M. Hainsworth, was asked to submit an estimate of the cost of altering the fire station for housing the engine, the cost thereof to be included in the application for a loan. There were three other tenders—from Messrs. Dennis Brothers, £995; Hy. Simonis, £968; and Leyland Motors, £1,160.

Westminster B.C.—The council have decided to insert a clause in all annual contracts for supplies and work hereafter entered into that no German or Austrian goods are to be accepted, also that the council's various sealed samples that are of German or Austrian make be replaced by others, preferably of British make.

Yarmouth T.C.—The borough surveyor, Mr. J. W. Cockrill, is considering a scheme for the installation of fire alarms throughout the town.

PERSONAL.

Mr. Thomas K. Fraser, of Silverwells, Bothwell, has been appointed burgh surveyor and master of works to the Airdrie Town Council.

Mr. J. Paton was on Tuesday last appointed borough surveyor of the enlarged borough of Plymouth for four years, at a salary of £800 a year.

Mr. C. W. Kendrick, sanitary surveyor and inspector to the Bingham Rural District Council, has had his salary increased from £150 to £200 a year.

Mr. Raymond Unwin, vice-president of the Town Planning Institute, has been appointed chief town planning inspector under the Local Government Board.

Mr. H. D. Sowerby has been appointed temporary road surveyor to the Dunfermline District Committee, Fife County Council, during the absence of Mr. A. Forbes on active service.

Mr. Stanley G. Critchell, formerly pupil and assistant to Mr. J. L. Redfern, borough surveyor of Gillingham, has been appointed assistant municipal engineer to the Lagos Municipality. He sailed on September 26th, and has taken up the work.

Mr. J. R. Heath, deputy surveyor of Stoke-on-Trent, who, as already announced in THE SURVEYOR, has been appointed borough surveyor of Swansea, has been presented by his old colleagues with a silver tea service, an oak tray, and a pipe.

FOR OTHER ADVERTISEMENTS
See End of Paper.

COUNTY BOROUGH OF ROTHERHAM.
APPOINTMENT OF BOROUGH ENGINEER AND SURVEYOR.

The Corporation of Rotherham invite applications for the position of Borough Engineer and Surveyor and Waterworks Engineer and Manager. Commencing salary £500 per annum. The maximum salary for this appointment is £700 per annum, subject to satisfactory service approved by the Corporation. Assistants, clerks and offices, and all travelling and office expenses will be provided by the Corporation.

Applicants must be Corporate Members of the Institute of Civil Engineers and Members of the Institution of Municipal and County Engineers, and not more than 45 years of age. The gentleman appointed will be required to perform the duties set forth in the list of duties which has now been prepared, and can be obtained upon application to the Town Clerk.

In addition, he will be required to carry out such other duties as the Council may from time to time determine. He will not be allowed to carry on private practice, but must devote the whole of his time to the duties of his office, and reside within the Borough.

Applications, stating age and qualifications, accompanied by copies of three testimonials of recent date, to be delivered to the Town Clerk, Town Hall, Rotherham, endorsed "Borough Engineer," not later than the 7th day of January next.

Canvassing Members of the Council, either directly or indirectly, will be a disqualification.

(By order)

CHARLES L. DES FORGES,
Town Clerk.

Town Hall,
Rotherham.
December 18, 1914. (2,179)

SURVEYING ASSISTANT and Draughtsman. Wanted, temporarily, in an Urban Council Surveyor's Office in Surrey, a Surveying Assistant, well experienced in the preparation of schemes for Main Sewerage and Sewage Disposal, details, quantities and estimates; must be quick and accurate surveyor and leveller, and good draughtsman. Salary £2 2s. per week. Applications to state age, particulars of training and experience, and to be accompanied by copies of recent testimonials.—Box 1,487, office of THE SURVEYOR, 24 Bride-lane, Fleet-street, E.C. (2,180)

WANTED—New Portable Boiler (with frame and shafts for horse) to supply steam to Ingersol Rock Drill. Capacity 400 to 500 lb. per hour. Working pressure 100 lb.—County Surveyor, Navan. (2,178)

The Future Control and Maintenance of Rural Roads.*

E. S. WOODDISSE, M.Inst.M.E., Surveyor to the Swardint Road District Council.

[illegible] the Institution of Municipal and County Engineers held at Cheltenham [illegible] Mr. Hawkins, county surveyor of Berkshire), no apology is needed for re-opening a subject of such vital importance to the [illegible] of this association, although it has apparently been finally dealt with by the more professional body, and a conclusion arrived at satisfactory at least to those gentlemen who dominate its policy, and to the county surveyors.

That some change in the management of our rural roads is necessary is indisputable, both in the interests of uniformity and of equalisation of cost. The disadvantages arising out of the present system are obvious to all, and need not be enumerated here. It may also be admitted that many small districts exist which, by reason of their restricted area and rateable value, are utterly incapable of taking their place in any national system that may be adopted. Such comic-opera districts as are, however, depicted by Mr. Hawkins (where an increased estimate of £300 would call for a 6d. rate) are the exception to the rule, if they exist at all. These are matters which call for adjustment by the county council boundaries committees, and need not seriously interfere with the retention by local authorities of some measure of control over the whole of the roads in large rural districts.

The contention of the author is that it is essential in the interests of efficiency and economy that local authorities should retain some measure of control over the roads in their area, subject, of course, to a certain measure of national supervision, where assisted by national funds, and in some cases even where not so assisted.

To place the whole of the roads in England and Wales, as has been suggested, into the hands of some sixty county councils, whose multifarious duties are already getting beyond their capability of control, and the local knowledge and interest of whose members is in many cases confined to their immediate division, would inevitably result in practically the whole of the control being placed in the hands of the county surveyor, who would become a sort of county potentate, with powers beyond those which ought even to be vested in one who has had the training in humility of a district surveyor. In fact, but for such training, he might run the risk of becoming a victim of that terrible malady *caput extensior*. The result would be to destroy the initiative and ambition of the rank and file of those surveyors who have been imbued with the highest ideals, and whose experience and local knowledge well fit them to continue the work which in the past they have performed under disadvantages to themselves and the authorities they have served.

That some local authorities take a parsimonious attitude in their highway expenditure is admitted, and the reason is not far to seek. As the collecting authority both for themselves and the county councils, they come most in touch with the man who pays the piper, and who blames them not only for their own tune, but that also of the higher authority, over whose lavish expenditure they have no control, and whose ever-growing demands compel them to curtail their own requirements, however necessary.

The setting up of the Road Board has undoubtedly been a step in the right direction, and the handing over to that body of executive powers over the whole of the road authorities in the country, with full control over the grants proposed to be made to them (which in many cases require to be greatly increased), would inevitably result in the adoption of a more uniform system in the management and control of our roads, while retaining that amount of local supervision which is essential in the interests of true economy and efficiency and compatible with the spirit of local government, and is an important factor in centralising and creating a national system.

[illegible] would thus be obviated so far as desirable, while those of multiplicity of control (so detestable to our county surveyors) could be further minimised by the setting up of boards similar to the old highway boards, having control over the whole of the main and other roads in their area, under direction of the Road Board, and [illegible] from the county and rural councils jointly. Smaller areas could thus be grouped together, inconvenient district boundaries obliterated, and, if desirable, populous and rural areas kept distinct. Small urban areas within such districts could retain control of their roads to such an extent as might be found necessary.

No great change would be necessitated in the existing arrangements of the various county and district staffs. The Road Board would absorb many of the highly trained heads of county council departments, and thus find an outlet for the inexhaustible energies of those gentlemen whose one ambition apparently is to control the highways, byways, and other ways of England.

Probably one of the most desirable results from a professional point of view would be to prevent unqualified persons being appointed, as the Road Board would exercise similar powers to those now exercised by the Local Government Board in the appointment of sanitary inspectors and medical officers, and to fix reasonable salaries in place of those miserable doles now paid by some small councils. A further result would be a specialisation in road construction, as distinct from other branches of the engineering profession.

The author wishes it to be distinctly understood that he is in no way endeavouring to dogmatise, but simply to suggest an alternative scheme to the one put forward by the controlling body of the older association, and apparently acquiesced in by the members of that society.

DISCUSSION OF MR. WOODDISSE'S PAPER

A very brief discussion followed the presentation of Mr. Wooddisse's paper at the recent annual meeting of the Institution of Municipal Engineers.

Mr. G. F. TAYLOR (Warwick), proposing a vote of thanks, questioned whether it would be desirable to hand over the complete control of rural roads to the county councils, having regard to the amount of works which those authorities were already responsible for. None the less, rural surveyors would willingly give their support to any arrangement which would improve the existing conditions, while preserving their own rights. Mr. Wooddisse's paper set out the essential features of efficient highway administration, but these ideals were by no means obtainable at present. However district surveyors tried to adopt what he regarded as the best practice, they found their efforts nullified by the county councils. Bureaucracy was the enemy of efficient self-government, and the handing over of the highways to county surveyors would end inevitably in disaster.

Mr. F. W. POYNTER (Watford) seconded the vote of thanks.

Mr. J. BAILEY (Spalding), while not criticising the county councils, said he was convinced that county councils and their surveyors had in hand quite as much work as they could carry out efficiently. Had rural authorities, however, in years gone by, carried out their duties properly, county councils would not have attempted what they were doing. They were suffering from the lethargy of the past.

Mr. G. B. CHILVERS (Oundle) agreed that it was quite certain many of the rural district councils wanted waking up. Their methods were antiquated, and some had even yet to realise the necessity of steam rolling.

Mr. H. BOOT (Westminster and Tunbridge Wells) commented on the practice that existed of breaking [illegible] roads almost as soon as the latter were [illegible]

at University College, Dundee, and they here present are in plan, as, for example, when used to support the balcony of a theatre. The first part of the book sections. Chapter I. outlines the introductory Chapter II., which deals with the equilibrium of the low-girder. In Chapter III. the torsion of non-circular sections is considered, while Chapter IV. deals combined with bending, and Chapter V. touches briefly upon the general principles of design of a bow-girder exposed to both bending and twisting. The work important and intricate engineering problem.

YEAR-BOOK FOR 1915. Price 6d. nett. Manchester: Emmott & Co., Limited.

The twenty-eighth issue of this useful publication is on the same lines as its predecessors, and consists of a very useful and complete pocket-book of notes limit gauges, and the strength of flat plates. The information in regard to toothed gearing and the gas engine has been revised and considerably extended, while many new tables and additional illustrations have been introduced. The whole forms a concise collection of practical information of great value to those engaged in mechanical and structural engineering work.

* Any of the publications reviewed, or referred to as received, will be forwarded by the St. Bride's Press, Limited, on receipt of published price, plus postage in the case of nett books.

MUNICIPAL ENGINEERS AND THE WAR.

To the Editor of THE SURVEYOR.

SIR,—The letter from Mr. G. Bertram Hartfree in young engineers who have volunteered for foreign service to increase their professional knowledge while in those countries may have particular application to Karachi, through the port of which so many of such engineers will make themselves known, and we shall be pleased to grant facilities for works to be inspected.

We had the pleasure of seeing some sixty of the officers of these battalions at our club last night, and chairman of committees on the Stonehouse Council, Plymouth, and who was able to give me news of Mr. Paton, of Plymouth, one of our respected past-presidents of the Institution of Municipal and County Engineers.—Yours, &c.,

MILLIAM LEA, ASSOC.M.INST.C.E.,
Chief Engineer,
November 12, 1914. Karachi.

WILTSHIRE SURVEYORS' ASSOCIATION.

The first general meeting of the Wiltshire Surveyors' Association was held at the Town Hall, Trowbridge, on Saturday last, the 12th inst., the [illegible] presiding. There were present: Messrs. E. G. Powell (county surveyor), Devizes; A. E. Adams (Chippenham Borough), J. W. Brooke (Melksham Rural), A. O. Crew, Devizes Main Roads), C. G. Moore (Westbury Urban), E. Dunham Davis (Devizes), E. J. Gilling (Bradford-on-Avon Rural), J. Godfrey (Calne Rural), H. G. Nicholson-Lailey (Devizes), A. H. Lapham (Chippenham Rural), A. E. Long (Warminster Main Roads), S. W. Saunders (Devizes Rural), and W. H. Stanley (Westbury Rural).

Letters of regret for inability to attend were received from Messrs. T. V. H. Davison (Tetbury), F. T. Hesman (Axbridge), W. H. Hilton (Malmesbury), D. W. Morrice (Salisbury Rural), H. C. Phillips (Mere), R. A. Skelton (Wilton Rural), and W. Strickland (Bradford).

Mr. H. G. Nicholson-Lailey was voted to the [illegible] and the minutes were confirmed [illegible] the meeting.

President: Mr. J. Geo. Powell, county surveyor.

Members of Council: Messrs. A. E. Adams, J. W. Brooke, A. O. Crew, J. W. Goodwin (Salisbury), J. Hamp (Swindon), H. G. Nicholson-Lailey, A. H. Lapham, and W. H. Stanley, the last-named being elected chairman of council, with Mr. E. Dunham Davis as hon. secretary.

It was resolved to hold [illegible] Trowbridge, on March, May [illegible] and the annual meeting on the last Saturday in October. The March meeting [illegible] to be held at Chippenham.

A Surveyor's Dilemma. In the course of the last meeting of Kidderminster District Council the surveyor said he was [illegible] with regard to labour. He no sooner got men to take the place of those who had enlisted than they followed suit. There [illegible] he had taken on. The chairman: I am rather glad. The surveyor: So am I in a [illegible] The chairman: It will be more serious yet. The surveyor said the assistant surveyor was [illegible] the country, and wished to know if his position would be kept for him. The chairman: Certainly. We will not [illegible]

PORT-OF-SPAIN CITY COUNCIL.

The Council invite applications for the combined posts of City Engineer and Engineer of the Port-of-Spain Water and Sewerage Works.

2. The salary attached to the post of City Engineer is £600 a year and to that of Engineer of Water and Sewerage Works, £500 a year, with travelling allowance at the rate of £75 a year.

3. The intention of the Council being that the [illegible] of "City Engineer" and "Engineer of Water and Sewerage Works" should be held by the same person, every application must be for the two posts combined.

4. The offices are pensionable under the Port-of-Spain Corporation Ordinance, 1914.

5. The appointment, so far as concerns the post of Engineer of Water and Sewerage Works, is subject to the approval of the Governor.

6. Candidates must be corporate members of the Institution of Civil Engineers of England, and must possess experience in the design, construction, and maintenance of waterworks and sewerage systems.

7. Applications, accompanied by not less than three recent testimonials, and stating age and previous experience, must be supported by satisfactory evidence that the candidates possess the qualifications set forth in the preceding paragraph of this notice, and must be forwarded so as *to reach the undersigned not later than the 31st January, 1915.*

8. Candidates must also forward with their applications a medical certificate of fitness for service in the West Indies.

9. The successful candidate will be required to furnish a bond with an approved surety in the sum of £500 for the due performance of the duties of the above offices. He will be required to devote his whole time to the service of the Corporation, and to reside in the City of Port-of-Spain, or within one mile of the limits thereof; and he must be prepared to enter upon the duties of the appointment within one month from the date of the receipt by him of the official notice of his appointment.

JOSEPH ARNOLD LAMY,
Town Clerk.

Town Hall,
Port-of-Spain,
Trinidad, B.W.I. (2,128)

And Municipal and County Engineer.

Vol. XLVI. DECEMBER 25, 1914. No. 1,197.

Minutes of Proceedings.

Limited Dedication of Highways.

One of the leading principles governing the law as to the dedication of highways is that a landowner who dedicates part of his land as a highway may impose reasonable restrictions on the exercise of the public rights. In other words, there may be what is termed a "limited dedication." In this respect the law was left unaffected by the Highway Act, 1835. Sec. 23 of that Act merely altered the previously existing law as to the liability of the parish for the repair of highways (so far as regards roads not previously dedicated), by making formal dedication, in the prescribed method, a condition precedent to such liability. But the Act left untouched the law as to the mode in which public rights over a road may be acquired without formal dedication. The grounds on which the principle to which we have referred is based were stated by Mr. Justice Blackburn in a case heard before him in 1862 (*Fisher* v. *Prowse*, 2 B. and S., 770), and may be thus summarised: It is not obligatory upon an owner to dedicate his land as a public highway, nor is it compulsory on the public to accept it. If it is offered subject to certain reservations, and the public accept it in such circumstances, there can be no injustice in holding them to the terms on which the benefit was conferred. On the other hand, great injustice would often arise if the landowner should be bound to alter the state of circumstances to his own disadvantage and loss. The authorities show, however, that this principle must be construed reasonably, and it is not likely that it would be interpreted as permitting a restriction which was so obviously unreasonable or merely capricious as to be repugnant to the right actually granted.

It will, we think, be of interest briefly to note, by way of illustration of the principle, one or two specific instances of "limited dedication." In the first place, a road may be dedicated subject to an existing erection on or excavation near it, and the dedication will be taken to have been made to the public and accepted by them, subject to the inconvenience or even risk arising from such a state of things. Hence the following drawbacks have been held to be lawful: A cellar-flap projecting slightly above the footway; a flight of steps leading to the door of a house and partially obstructing the way; a bridge so low as to be dangerous to persons driving under it in vehicles; an unfenced declivity; gates and stiles. Secondly, a road may be dedicated subject to rights previously granted by the landowner or his predecessors to other persons. As instances of these may be mentioned the right to hold a market, or to erect booths during a fair, leaving sufficient space for free passage along the highway, and the right of the occupiers of adjoining premises to deposit goods in front of their premises. So a sea wall over which there is a public right of way may be under the control of Commissioners of Sewers or others having statutory powers which are paramount to the public right. Or, again, the rights of the public to use a swing bridge across the entrance to a dock may be limited by the right to hold up the traffic for the passage of ships to and from the dock.

Thirdly, conditions as to the mode and time of the public user of a way may be imposed. For instance, it may be dedicated as a bridleway only (*i.e.*, a way not to be used with carts and carriages), or as a footway; or as a carriageway not to be used as a driftway (*i.e.*, for driving cattle); or even as a carriageway to be used for all purposes save the carriage of coals. So a bridge may be dedicated to be used on foot and with horses at all times, but not with carriages, except in times of flood or frost, when a neighbouring ford may be dangerous or impassable. Fourthly, a dedicating owner may reserve to himself the right of occasionally interfering with the use of the way. Thus a footpath across a field may be dedicated subject to the right to plough it up periodically in due course of husbandry; or a road may be dedicated subject to the right to cut a channel across it in time of flood. Whether an owner can, without a Royal grant or statutory powers, dedicate a road to the public subject to the right to levy tolls seems to be an open question. But where a road has been used and toll paid to the owner of the soil from time immemorial, there being no evidence to show that the public had a right of passage before the toll was claimed, the Court will infer a legal origin for the toll.

The Purification of Dairy Wastes.

ordinary intelligent labourer, and will need very

of works which shall need little attention. He must have in mind not only efficiency of treatment, but also the almost inevitable ignorance and neglect of the person responsible for the

suitable method of preliminary treatment for

attention than natural sedimentation. It is quite true that septic tanks are unsuitable, more particularly because they induce the formation of acid in the liquid, and thus prevent the proper bacterial action in the filters. We are not satisfied that it is difficult to design a tank for natural sedimentation, without the use of chemicals, in which the solids in suspension can be arrested without the formation of acids, and in this connection we do not agree with the recommendation that the total volume of the wastes should be reduced to as small a volume as possible. Rather would we suggest that the skim milk from the feeding apparatus should be mixed with the stronger liquids, so as to dilute them to the greatest possible extent. If this is done, and a *properly designed* tank provided, the matters in suspension can be removed without using chemicals, and a tank effluent produced which will be very suitable for the subsequent treatment on filters.

The construction of percolating filters with a depth of 12 ft., as recommended by Mr. Kershaw, also creates difficulties. In most cases it will necessitate the provision of pumping plant, thus increasing the cost both of construction and for maintenance. Further, if in order to reduce the amount of supervision required the total daily volume of the wastes is pumped up in a short time each day, this will have a harmful effect upon the treatment in the tanks and filters. If, on the other hand, the period of pumping is spread over the whole working period of the creamery, it involves considerable additional supervision. It is not impossible to provide very efficient filtration in a depth of much less than 12 ft., and in this way the whole of the works can be operated by gravitation. As already stated, the problem is beset with difficulties, and we are glad to have had the opportunity of dealing with the subject on the present occasion, as we hope that any of our readers who have had to do with works of this kind will communicate the results of their experience for the benefit of others who may be faced with the problem either now or at some future time.

* * *

Professional Etiquette.

In the discussion of questions of discipline among the members of a profession the ranks of which are not "closed" comparison is often made with the superior position of the "closed" professions in regard to the matter. In making such a comparison, however, the actual sanctions by which discipline may be enforced in the latter case are not always clearly kept in mind. In the first place there is the power of a highly organised public opinion, the fear or pressure of which is in most cases sufficient to act as an effective restraining influence. The ultimate sanction, however, is the power which rests with some legally constituted governing body, consisting of members of the profession elected, to punish those who are guilty of conduct which is scandalous in a professional respect by suspending them from practice. In the case of any profession which, like that of engineering, is an open one, the latter [illegible] is obviously impossible, [illegible] liability may result in expulsion from a professional institution. It would appear, therefore, that all possible steps should be taken to secure that professional public opinion should make itself felt in every possible way. That such public opinion among engineers is not strong enough to secure compliance with a rule of conduct laid down by the Institution of Civil Engineers is shown by the contents of a circular just issued by that body.

In the early part of this year the institution issued a circular deprecating "the practice which exists among local authorities of inviting, by advertisement, engineers to submit in competition with others *their terms* for preparing plans and proposals for certain engineering schemes, accompanied then, or perhaps at a later stage by, estimates of the cost of the works proposed." Within eight months of the issue of this circular the Eastern Valley (Monmouthshire) Joint Sewerage Board issued an advertisement inviting the submission of terms for certain professional engineering services. In spite of the rule laid down by the institution, and in direct contravention of it, a number of corporate members were found ready to reply to this advertisement, and in the circular which has just been issued it has been found necessary to remind them and others that their having done so constitutes an action of professional misconduct, which renders the offenders liable to expulsion from the institution. We agree with one correspondent, who in our issue of last week, under "Things One Would Like to Know," expressed the hope that the culprits were all very junior members of the profession. To them we would say that in engineering, as in every profession, the years of waiting are weary, but if they are passed patiently, and with the firm resolve honourably to uphold the best interests of the profession as a whole, the reward of the future will be both greater and more sweet.

* * *

The Salaries of Limerick County Surveyors.

The Limerick County Council appear to have acted well within their discretion in raising the salaries of their two county surveyors from £300 to £475 per annum, for, as has already been pointed out, the first figure, including as it did all the heavy personal expenses involved in the pursuit of the officers' professional business, was quite inadequate. The council, however, have incurred the ire of a considerable body of ratepayers in making their decision, and especially they have brought down upon their heads the fierce anger of the Kilmallock Farmers' Association, who have presented to the Kilmallock Rural District Council a resolution protesting against the increases. Incidentally it may be mentioned that to describe the vote of the county council as an increase of salary is something of a misnomer. It really amounts to a recognition that the sum hitherto

paid to the county surveyors, seriously diminished as it was by out-of-pocket expenditure, was insufficient for the work performed. We note that at the Kilmallock meeting, at which the vote of the Limerick magistrates was so forcibly expressed, Mr. Bennett, a member of the Limerick County Council, while not saying that the salaries of the county surveyors were adequate, objected to the amount of the increase before the county council could have any assurance that they discharged their duties in a satisfactory manner. Such evidence is hardly the question. At best it would appear to be merely an effort on the part of Mr. Bennett in compromising between his duty as a member of the county council and saying things agreeable to the Kilmallock farmers. It is the prerogative of the Limerick County Council to appoint fit and proper persons to the office of county surveyor, and we have not the least doubt that in this instance they have made their choice wisely and well. It is just as certainly the province of the county council to declare that the office of county surveyor shall carry a salary befitting the importance of the services rendered, and in this regard we hope they have also decided wisely and well. Anyway, it is clearly the duty of the county council to see to it that, having made a fixed for properly remunerating their surveyors, they will not entitle themselves to making concessions to the ill-informed clamour that was voiced at Kilmallock.

* * *

Highway Engineering as a Profession.

The influence of modern mechanically propelled traffic on the methods of road construction and maintenance has been so great, and the problems raised by its advent have been so many and complex, that highway engineering may now fairly be considered as a highly specialised branch of the engineering profession. This fact has been recognised not only by the institution of special examinations, such as that recently undertaken by the Institution of Municipal and County Engineers, but also by the provision of special educational facilities for those desirous of embracing highway engineering as a profession. We have before us as we write the prospectus of courses in highway engineering and allied subjects leading to the degree of Master of Arts at Columbia University in the City of New York. The courses have been arranged with due regard to the convenience of students engaged in practical work who can only go into residence for training leave of absence, and the work of the two sessions necessary to secure the degree has been designed so as to cover every phase of highway engineering both theoretical and practical. Among the subjects dealt with during the first session are road surfaces, highway bridges, mechanical appliances, the mining, manufacture and testing of bituminous materials, and engineering geology; while the second session includes special pavements, highway law, and laboratory courses in the testing of materials both bituminous and non-bituminous. It will be seen at once that such courses of instruction will be of the greatest value, and the scheme has the enthusiastic support of many of the foremost highway officials and engineers in the United States. Would it not be possible for some of our modern universities to undertake similar work?

* * *

The Military and the Roads.

From the time when the war broke out in August last we have repeatedly insisted upon the necessity for local authorities and their engineers doing all in their power to co-operate with and assist the military authorities, and with this object in view our columns have always been open for suggestions as to the forms such assistance should take. At a very early stage our readers were reminded that by strengthening roads likely to be used for purposes of transport, local authorities would not only be assisting directly in the accomplishment of the great task which the nation has in hand, but at the same time they would in the long run be saving the pockets of their own ratepayers. A complaint which was made at the last meeting of the Crowborough Parish Council shows that the advice has not been taken to heart in all cases. The gist of the complaint was that, owing to the heavy military traffic, a certain road had been "done up" and rendered impassable, and that in consequence of this the whole of the traffic had been transferred to another road, which would very shortly get into a similar condition. The member who raised the question very properly pointed out that the whole trouble might have been avoided if the road had been remetalled when the wear and tear first became evident. Now more drastic measures will have to be adopted unless the use of either road is to be denied both to the military and the public. These are eminently cases in which "a stitch in time saves nine."

* * *

City of London Sanitary Company.

An appeal is being made for recruits for the 1st London (City of London) Sanitary Company (T.F.). Men of the company have been at the Front for some time past, and further sections are at present under orders for duty with the Expeditionary Force. These sections, which consist of an officer, a staff-sergeant, two sergeants, two corporals and twenty men, are going fully equipped for laboratory work, examining and sterilising water, disinfection and general camp sanitation work. The formation of the sections has absorbed the Imperial Service Company and the majority of the 1st Reserve Company, and it is therefore necessary to raise further reserve companies, sections of which will have the prospect of going abroad almost immediately. All recruits must be prepared to sign on for Imperial Service, and men from municipal engineers', architects', and public health offices, or from similar private offices, who possess satisfactory sanitary qualifications, are eligible for immediate promotion to N.C.O. rank. Pay is at the usual Army rates, with additional corps pay. Applications should be made, either personally or by letter, to the officer commanding 1st London (City of London) Sanitary Company (T.F.), Room B6 (Turk's-row entrance), Duke of York's Headquarters, Chelsea, S.W.

* * *

An Architects' and Surveyors' Training Corps.

The council of the Surveyors' Institution have been asked by the promoters of the Architects' Volunteer Training Corps to give it their official recognition, and to bring its objects to the notice of their members. The council are persuaded that the corps is fulfilling a useful office, and urge all members in the London district and suburban area who are eligible, and who have not already joined a military organisation, to give it their support. Even those who are unable to train can render assistance by becoming members and by assisting the corps to obtain and classify recruits, and advise men wishing to join the Regular Forces of the units most suitable to their knowledge and physical ability. It is proposed that the title of the corps—whose headquarters are 18 Tufton-street, Westminster—should be changed to "The Architects' and Surveyors' Training Corps," but this still lacks official confirmation.

The Purification of Dairy Wastes.—(1).

By G. BERTRAM KERSHAW, M.A.M.Soc.C.E., M.INST.C.E., Late Engineer to the Royal Commission on Sewage Disposal.

In few, if any, industries has there been more expansion during the last few years than in the dairying industry. There is still room for further expansion, and with the advent of fresh depots, creameries, &c., it is important to see that the wastes produced shall be purified before admission to a stream or river. Before describing the various wastes it may be well to state briefly the various classes into which the industry may be divided.

In this country the industry may be classified as follows: Dairies, creameries, cream-separating stations, and butter factories.

Creameries may be defined as places where [illegible] is made. There are two varieties. In the British Isles a creamery is a depot where milk is taken from the farmers, centrifugally separated, and the cream therefrom churned into butter. Such a depot in the Australian Colonies would be termed a milk factory. A creamery in Australasia usually means a factory where cream (mostly centrifugally separated) is received from the farmers and is made into butter.

In Ireland a central creamery usually receives cream from one or more separating stations established in the surrounding district for the convenience of the milk suppliers.

At cream-separating stations the cream is separated from the milk, the cream being sent to a creamery for churning.

At butter factories blending of butter takes place, the butter being sent to the factories by farmers.

In addition, at some branches cheese-making and the manufacture of condensed milk is carried out, while one or more of the different classes of the industry may be found at one depot.

In the States the dairy industry comprises dairying, skimming stations (corresponding to the English cream-separating stations), milk depots creameries (including butter factories), milk sugar factories, and renovated butter factories.

In many of the foregoing branches very polluting waste liquids are produced, and some of them are difficult to treat.

In the case of small dairies, such as may be found attached to small farms, the wastes are mainly derived from the washing of various utensils which have been used for holding and transferring milk, while other by-products—*e.g.*, separated milk, &c.—are fed to stock on the farm. Further, the wastes derived from the washing of utensils are small in volume, and can always, or nearly always, be disposed of by distribution on grass or garden land, and nuisance is not likely to arise from pollution of streams.

At cream-separating stations the cream is separated from the milk, to be subsequently conveyed to the creamery or churning station, the separated milk being returned to the farmers for feeding calves and pigs. It may be mentioned, in passing, that the usual mixing of the various blends of separated milk at the separating station cannot be viewed as satisfactory, since, in the event of infected milk being supplied, the whole of the separated milk returned to the various farmers may easily become contaminated unless Pasteurised.

Large volumes of waste liquids are produced at creameries, some of them polluting—*i.e.*, capable of absorbing large quantities of dissolved oxygen from water—while part of the used water is practically clean, and can be either discharged without treatment, or utilised for diluting the stronger liquids, if this should be deemed desirable.

The polluting liquids consist mainly of washing-water used in connection with separators, coolers, tanks, butter-workers, and churns, together with the rinsings of milk cans, &c.

These liquids are capable of taking up very large quantities of oxygen, and if discharged without purification into a small stream are liable to cause considerable nuisance from smell and fungoid growths in hot weather, besides rendering the water of the stream unfit for purposes involving the use of clear water.

The worst of the wastes is usually the first washing from the churning operations.

Coming to the non-polluting wastes. These consist of refrigerator and cooling waters; and, unless it is desired to dilute the stronger wastes with them, they can be turned into the rain-water drains. As a general rule, however, they are mixed with all the other waste liquids.

The combined liquid wastes from a creamery have the appearance of milky water, and they soon become highly putrefactive, containing casein, albumen, fat, lactic acid, and milk sugar.

The volume of wastes produced at a creamery varies in volume at different seasons of the year, being greatest in the warmer months; again, the volume is largely affected by the presence of a plentiful water supply, or the reverse; also whether clean waters are mixed with the dirty wastes.

Generally speaking, the total volume of waste liquid produced at a creamery varies from about two-thirds to four-fifths of the raw milk dealt with, while it sometimes equals it in volume; thus it is generally safe to assume for purposes of calculation that a creamery working under normal conditions, and dealing with, say, 6,000 gallons of milk a day in the "flush" season, will have some 5,000 to 6,000 gallons of waste liquid per twenty-four hours to be dealt with.

Regarding the composition of the various wastes derived from the dairy industry, Mr. Walter Thorp, F.I.C., the well-known authority on dairy products, gives the following figures of analysis as being representative of a strong dairy sewage, where the volume of clean water used is kept as low as possible:—

	Parts per 100,000.
Nitrogen in suspended matter	26·32
Nitrogen in soluble matter	12·40
Total nitrogen	38·72
Suspended solids	235·00
Dissolved solids...	385·00
Total solids	620·00
Total chlorine in solution	19·25

The following figures* refer to representative analyses of creamery wastes from various sources in America:—

PARTS PER 100,000.

Nature of sample.	Oxygen consumed	Organic N.	N. as free ammonia.	Acidity to phenol-phthalein.	Suspended matter.
1. Composite sample from cream-separating stn.	96·6	24·9	·40	51·8	—
2. as above	284·5	25·0	1·70	—	—
3. as above ..	75·1	11·5	1·40	23·0	—
4. as above ...	49·4	5·8	·16	14·2	—
5. as above .	10·7	5·2	1·6	30·3	—
6. Composite sample from butter factory	18·0	8·0	·25	54·4	247·5
7. Chance sample	51·2	1·8	·21	—	—
8. Equal parts skimmed milk and water ...	780·0	198·0	6·00	--	
9. One part skimmed milk and 35 parts water ...	42·5	24·0	1·05		
10. Average sample, butter factory	147·0	48·0	·21	24·0	—

* *I.e.*, "Average."

From the foregoing figures it will be seen that dairy wastes comprise liquids varying considerably in character and strength, and these variations must be provided against in any purification scheme.

The uniform attainment of a standard having limiting figures of, say, 3 to 4 parts per 100,000 of suspended matter, and similar figures for dissolved oxygen taken up from water in five days at 80 deg. Fahr. (27 deg. Cent.), should be within the reach of all concerns possessing a properly designed purification plant, and also competent supervision.

The writer, when engineer to the Sewage Disposal Commission, visited many dairy purification plants, and in every case which came under survey it was apparent that works had been put down under the assumption that a liquid similar to ordinary domestic sewage had to be dealt with, instead of a

* The Disposal of Wastes from the Dairy Industry. A. Elliott Kimberley. Quarterly Bulletin. Ohio State Board of Health.

liquid of extremely complex and variable character, many times stronger in most respects than the strongest of domestic sewages.

It cannot be too clearly realised that the satisfactory treatment of most trade wastes stands in an altogether different category from sewage treatment, and that the policy of putting down purification works which have elsewhere proved successful for totally different types of liquid to the one in question on the "standard" principle is one which is bound to end in failure.

In dealing with trade wastes, a good practical working knowledge is needed of the whole subject, since in dealing with a particular waste knowledge acquired in treating other wastes may often prove beneficial. Further, special regard must be had to local conditions, and it is quite useless to install expensive apparatus requiring constant supervision in country districts far removed from towns.

A good deal has been done in other countries, particularly in America, concerning the purification of creamery wastes, but in this country few systematic investigations appear to have been made.

It may be well, before going further, to mention briefly some of the work done in connection with dairy wastes.

In America Mr. V. L. Kimberley, as the result of investigations carried out at the instance of an Ohio Commission, found that, if the river receiving the waste was about thirty times the volume of the waste liquors, dairy wastes could be discharged after treatment in settling tanks holding a two days' supply, while in other cases dairy wastes might be purified by intermittent sand filtration at a rate not in excess of 20,000 gallons per acre per twenty-four hours, until incapable of putrefaction.

In Germany irrigation of land by dairy wastes is often employed, the wastes being first settled in tanks, sometimes with the addition of chloride of lime.

Guth states that not more than a cubic metre (about 220 gallons) of liquid should be applied to half a cubic metre (about two-thirds of a cubic yard) of filtering material, while Dunbar considers that an effluent from a dairy, if not too concentrated, can be purified by ordinary biological processes, and most successfully by means of continuous percolating filters.

Harm appears to have obtained good results by precipitation with acid silicates.

Dr. H. M. Wilson considers that about 5,000 gallons of fairly strong waste can be treated per acre of suitable grass land per twenty-four hours.

The writer has made experiments on the treatment of dairy wastes, employing precipitation with certain precipitants as a preliminary process, the resulting tank liquor being passed through a small clinker filter 12 ft. deep, at the rate of about 30 to 40 gallons per cube yard per twenty-four hours.

The effluents obtained by this means were quite clear, almost free from suspended solids, and took up less than 2 parts of oxygen per 100,000 from tap water in five days. In other words, the effluents would have come well within a standard of the stringency recommended by the Sewage Commission in their Eighth Report.

The main point in the treatment of dairy waste lies in the preliminary treatment, which should be thorough, and it is probably practically useless to attempt sedimentation without the aid of precipitants; further, all precipitants are by no means of equal efficiency for dairy wastes. Septic tank treatment has been tried, but it seems far preferable to remove the solids as far as possible by good preliminary treatment, rather than to liquify the various substances in a septic tank, and thereby produce a very much stronger liquid.

The results obtained by septic tank treatment of dairy wastes are by no means sufficiently authenticated to warrant the adoption of this process in preference to precipitation.

It has been urged that precipitation involves a considerable amount of trouble and labour, but this need not be the case, and if it is possible to provide the supervision essential for the successful carrying on of a creamery, it is surely possible to provide the small amount of supervision needed for precipitation, especially if costly litigation arising from pollution of streams is thereby avoided.

It may be noted in passing that no tank process by itself will produce a liquid other than one which will subsequently putrefy, and to comply with the standard previously suggested the tank liquor must be subjected to biological filtration through a properly constructed percolating filter, the material of which is durable and of a suitable size. It should be observed that, unless due precautions are taken, a tank liquor derived from dairy wastes is apt to become extremely acid, particularly if it is an effluent from a septic tank, and this acid liquor will rapidly break down unsuitable filtering material. Good precipitation with the right precipitants minimises this acidity.

In certain cases dilution of the tank liquor may be advisable before it is filtered.

With regard to the type of filter, there is little doubt that the best form is that of the deep percolating filter, since first-class oxidising power is needed in a filter called upon to treat a liquid which absorbs large quantities of oxygen.

Distribution should be good in order to obtain the best results. In many districts peat is obtainable, and may be used as a distributor for certain types of filter; it requires, however, frequent attention and renewal when necessary if satisfactory results are looked for. The used peat possesses good manurial properties.

With regard to the treatment of dairy wastes upon land, it is desirable that there should be some form of preliminary treatment before the liquid is treated on the land, in order to remove solids which would otherwise tend to choke the pores of the soil.

A very excellent material is found to be fine peat arranged in the form of an embanked bed; the peat acts as a mechanical strainer, and after a certain time it requires removal and renewal.

Concerning the rate of treatment of dairy wastes upon land, much will depend upon the quality of the soil and subsoil; but with land of medium quality, from 3,000 to 4,000 gallons per acre per twenty-four hours of settled or strained liquid is probably a safe dose. Much, however, depends upon the nature of the intermittency of the irrigation.

Grass land is especially benefited by the careful application of dairy wastes.

Objection is often raised to the admission of dairy wastes direct to the sewers, and unquestionably, in the majority of cases, preliminary treatment should be given before discharge from the dairy premises, otherwise greasy solids are apt to coat the sewers and cause nuisance in hot weather.

No effort should be spared to bring the total amount of waste liquid to as small a volume as practicable before tank treatment, and it would seem that full use is not at present made of by-products, these being often regarded as wastes.

Separated milk is somewhat largely used on the Continent to form a constituent of certain insecticides, the milk causing the other chemicals to adhere slightly to the leaves and branches of shrubs and trees.

Casein has been used now for some time to make a substance resembling celluloid, and suitable for forming combs, knife-handles, &c.

Proposed Reconstruction of Wearmouth Bridge.—The Sunderland Town Council have agreed to promote a Bill to authorise the corporation to reconstruct the Wearmouth Bridge, and conferring on the corporation the necessary powers with regard to carrying out the scheme.

International Engineering Congress.—A report having recently been circulated to the effect that the International Engineering Congress was to be abandoned, we are desired to state that this is not correct, and that the congress will be held in San Francisco as arranged, from September 20 to 25, 1915. A detailed circular of information regarding the publications of the congress has been prepared, and will be sent upon application to the Secretary, Foxcroft Building, San Francisco.

Roadside Hedges and Trees.—The highway surveyor to the Cuckfield Rural District Council, Mr. A. McArthur, in a report recently to that authority, stated that he had commenced his annual campaign on hedges and trees cutting, and hoped that those concerned would not fail to see that in giving this work the attention it deserved, the muddy road, the inevitable result of overgrown and neglected hedges and trees bordering on the highways, would disappear, and instead a clean and well-preserved road would ensue. The exclusion of light and air had a notoriously ill effect on the life of a road, and in the proportion that deterioration by this cause was arrested or removed, so was the cost of maintenance reduced, a matter of no little consideration where many miles of highways had to be maintained.

CRYSTAL PALACE OLD STUDENTS' SOCIETY.

ANNUAL GENERAL MEETING.

[redacted]

[redacted]

The Provision of a Municipal Water Service.*—(3).

By LEWIS MITCHELL, Minst.C.E., F.G.S., Waterworks Engineer, Bolton.

It is, however, when we come to the second-named [illegible] principal source of supply viz., [illegible] dependent upon the yield of drainage areas that the greatest engineering knowledge and skill are called into exercise in the selection of a suitable drainage area, the determination of the available yield of such drainage areas, the choosing of eligible sites for the storage reservoirs, and the construction of such reservoirs.

In regard to the drainage area or gathering ground, it is desirable that it should be at such an elevation as to command the district of supply by gravitation; in some cases this is not possible—as at Leicester and Rotherham, where the water is first collected in the reservoirs and then pumped to the required height. Peat-covered moors should, as far as possible, be avoided, because of the discoloration and humic acid [illegible] liability to plumbo-solvent ability. The water supplied to some towns—such as Kilmarnock and Tynemouth—is so tinted with peaty infusion as to resemble weak tea or even porter. So important is this consideration that the precaution should also be taken of removing all beds of peat within the area of the reservoir itself; from the Delph reservoir (now being completed for the corporation of Bolton) not less than 100,000 cub. yds. of peat have been taken out, and from the area to be covered by the Alwyn reservoir (Birkenhead) over 1,000,000 cub. yds. of peat have been so removed.

Above all it should be free from pollution, and removed as far as possible from contaminating agencies. With the increase of population and the growing demands for wholesome water, together with the raising of the standard of purity insisted upon, many of our large towns and centres of population have gone long distances to tap such sources of supply, involving considerable expense, rather than continue to have recourse to the use of a more convenient and accessible but doubtful supply. Thus Manchester has gone to Thirlmere (a distance of 96 miles); Glasgow to Loch Katrine; Liverpool to Vyrnwy (66 miles); Birmingham to the Elan Valley (80 miles); Leicester, Nottingham, Derby and Sheffield to the Peak District; Bradford to the Nidd Valley; Edinburgh to the Talla; Birkenhead to the Alwyn (Mid Wales); and Fylde Water Board to the Hodder (a source suggested for Bolton). London, however, still takes the bulk of its supply from the rivers Thames, Lee and New River, whose drainage areas above the intakes are admittedly polluted, although as long ago as 1874 the Rivers Pollution Commissioners in their report on the "Domestic Water Supply of Great Britain" recommend "that the Thames should, as early as possible, be abandoned as a source of water for domestic use, and that the sanction of your Majesty's Government be in future withheld from all schemes involving the expenditure of more capital for the supply of Thames water to London"; further, "that the Lee should also be abandoned as a source of potable water," but "this measure is less urgent than the relinquishment of Thames water." Moreover, in 1895 the Water Committee of the London County Council prepared a scheme for supplying water from a series of reservoirs to be constructed in the uncontaminated drainage areas of the Wye, Usk and Towy, in the counties of Radnor, Brecknock, Carmarthen and Montgomery, from which 415,000,000 gallons per day could be obtained; but they are still content to drink water which is, on the authority of their medical expert adviser, "reasonably safe."

If the drainage area is not considerably remote from inhabited centres, it is difficult, and becoming increasingly so, even when absolute control has been secured by purchasing the lands, to entirely prevent pollution. In such a case it is essential, since cultivation of the land and ordinary farming operations are incompatible with the preservation of the purity of the water, to clear off the farms from the catchment area, remove all human habitations therefrom, and prevent, or reduce as far as practicable, the incursion of the public over it. But since it is also desirable to encourage farming operations and cultivation of the soil, which are already too much neglected in this country, and considering that facilities should be given to the toiling masses of our towns to become more intimately acquainted with the beauties of the surrounding country and to breathe the purer and health-giving air of the hills and moors, so that every public right of access thereto should be preserved, and having regard to the multifarious interests, private and public, which are usually associated with or arise from such an area, it is generally preferable, under all circumstances, to impound water upon a [illegible] uncontaminated and comparatively unrestricted area, notwithstanding the extra cost involved in connection with the longer aqueduct necessary. It has to be admitted that in the past too great discretion has not always been exercised in selecting gathering grounds, the quantity available rather than the quality of the water, and the proximity of the source to the district of supply permitting it to be provided at a comparatively low rate being the principal considerations. In view, however, of the bearing which these remarks might be taken to have upon any water undertaking in particular, it should be pointed out that Parliament would not readily grant to an authority powers sought by them under a Bill for the construction of waterworks and the appropriation of gathering grounds, the waters from which did not naturally flow towards that authority's town or district of supply, until it had already exhausted, or within a reasonable time would fully utilise, all available sources near at hand.

Compensation Water.

Having fixed upon a suitable gathering ground above the site of an intended reservoir, and having determined the quantity of water to be provided for the town, and the available yield or run-off which may be expected, having regard to the rainfall and extent of the catchment area, it is necessary to take into account in the calculations another factor, owing to the compensation water which has to be afforded to the streams below the site of the intended works or point of abstraction. On this matter Parliament is most insistent, and provides that, before application is made for a Bill whereby it is proposed to abstract water from a stream, notice in writing must be given by its promoters to the owners or occupiers of all mills and manufactories or other works using the waters of such stream or river of which it is tributary for a distance of 20 miles below the point at which it is intended to abstract the water, or down to a point on such river where its waters are navigable.

When Parliament authorises a corporation (or undertakers) to take water from a watershed, it is the invariable practice to provide for compensation for injury likely to be caused by the abstraction of water which would otherwise find its way into the streams or rivers fed by the watershed. This compensation may be in kind, or, especially if there are few millowners, in money, or in both, and in rare instances the injury likely to occur to particular works on a stream may be so great that a clause may be inserted requiring the water authority to purchase the mills or works of petitioners if they can prove to the satisfaction of an arbitrator that the business cannot be satisfactorily carried on by reason of the construction or maintenance of the works.

The measure of water compensation given by Parliament is usually one-third of the mean available rainfall of three consecutive dry years, and provision is generally made for the regular, equal and continuous supply of this water to the streams and rivers during the twenty-four hours, or twelve hours of each day. In exceptional cases a less amount has been allowed. Thus, in the great schemes of Thirlmere for Manchester, and Elan and Caerwen Valleys for Birmingham, the compensation water given was calculated upon one-fourth instead of one-third of the mean available rainfall, and in the case of Vyrnwy for Liverpool it is even somewhat less. The statutory obligations placed upon Bolton Corporation in respect to the compensation waters from their Wayoh and Belmont reservoirs are in some respects unique, inasmuch as the quantity is not less than 37 per cent in excess of the water available for the town (an inequity which is not perpetuated by the Bolton Corporation Act, 1905), and also by the fact that part of the compensa-

* Lecture delivered recently at Bolton.

[illegible] water in the Wayoh reservoir must be filtered [illegible] conditions which are not only singular, but glaringly [illegible]. In some cases a corporation undertakes to [illegible] supply from their own reservoirs, or dedicates to the millowners a separate drainage area [illegible] extent of that proposed to be appropriated for the town supply, on which they agree to construct a reservoir of a definite capacity to be [illegible] of the millowners and riparian proprietors.

The latter is unquestionably the more equitable, as it releases the corporation from the obligation to send down the stream or river a fixed quantity at all times, whether it may be required or not, and it places the management of the compensation reservoir in the hands of millowners, who can control and regulate the discharge therefrom to their own satisfaction, while both the corporation and the millowners stand upon an equal footing as regards the fluctuations of the seasons, and the conditions arising from prolonged droughts. The effect of the last-mentioned incidence will be apparent when it is pointed out that under the former arrangement a corporation is, as a rule, placed under a considerable penalty in case of failure, neglect or default to discharge the full statutory [illegible] of compensation water. Under the Act of 1905 the Bolton Corporation will be liable to a penalty not exceeding £25 per day in the event of the compensation waters from either the Delph, Eagley, Belmont, Wayoh or Broadhead reservoirs being less than those stipulated and will further be liable to make compensation for any loss, damage or injury sustained by any millowner or other person interested in any case where such loss, damage or injury arises from an avoidable cause or the neglect of the corporation; whereas, in the event of a drought, no responsibility whatever devolves upon them now in regard to the amount sent from their Rumworth, Wayoh and Belmont compensation reservoirs.

ACT OF PARLIAMENT.

The next step to be taken by a water authority or company is to secure powers to take the water, construct works, and acquire lands and easements by promoting a Bill in Parliament and obtaining an Act. In modern water Acts the following are among the usual matters inserted:

(1) Power to make arrangements with owners.
(2) Incorporation of Acts (the Waterworks Clauses Acts, 1847 and 1863, and the Lands Clauses Acts).
(3) Power to make works.
(4) Limits of deviation.
(5) Power to take water.
(6) As to compensation water.
(7) Power to hold lands for protection of waterworks.
(8) By-laws for preventing pollution of water.
(9) Corporation not bound to supply several houses by one pipe.
(10) By-laws for preventing waste of water.
(11) Supply to houses partly used for trade.

The procedure taken in obtaining a Private Act is briefly as follows: A plan showing the intended works and lands to be acquired, together with a book of reference thereto, is deposited for public inspection at the office of the Clerk of the Peace for the county in which the works are proposed to be made, and in the Private Bill Office of the House of Commons on or before November 30th immediately preceding the application for the Bill; notice giving a description of the proposed works and their locality is published in the months of October and November in the *London Gazette* (the *Edinburgh Gazette* for Scotland, and the *Dublin Gazette* for Ireland), and once in each of two successive weeks, with an interval of not less than six clear days, in some newspaper of the county in which the principal office of the corporation is situate. In compliance with the Borough Funds Act of 1903 it is essential that the Bill be submitted to a public meeting of electors, notice of which must be given by placards and advertisements in two successive weeks. At this meeting the mayor presides, and either he or an officer of the council gives such explanation of the Bill as he considers expedient. The decision of the meeting expressed by a single resolution in favour of the whole Bill, or by separate resolution in favour of any part or parts, is final, unless a poll is demanded by not fewer than 100 electors or one-twentieth of electors, whichever may be the lesser. If, however, the decision of the meeting is against the resolution, the council may require a poll, which would be conducted in accordance with the regulations of the Local Government Board. A copy of the Bill is deposited before December 18th at the office of His Majesty's Treasury and at the General Post Office; the office of the Secretary of State for the Home Department, and at the Local Government Board; at the offices of the Board of Trade and the Board of Agriculture and Fisheries; and if any streets or roads are to be interfered with in the laying of conduits, at the office of the Road Authority. On or before December 31st there are deposited at the Private Bill Office and office of the Board of Trade or Local Government Board copies of the estimates of expenditure on the intended works, together with a statement giving (*a*) area of the district, (*b*) population at last census, (*c*) rateable and assessable value, (*d*) rates made in the district during the last preceding financial year, (*e*) the sum of the balances of outstanding loans contracted by the local authority. The petitions for Private Bills are examined, and if the examiner considers the Standing Orders have been complied with, he endorses them and reports accordingly to the House. The chairman of the Committee of Ways and Means or the counsel to Mr. Speaker, on or before January 28th, seeks a conference with the chairman of Committee of the House of Lords or with his counsel, and they determine in which House of Parliament the respective Private Bills shall be considered. Referees, who are, of course, Members of the House, are appointed by Mr. Speaker, and they decide upon all petitions against Private Bills or Provisional Orders as to the rights of the petitioners to be heard upon such petitions—[illegible] as to their *locus standi*. At the commencement of every Session a Committee of Selection, consisting of eleven members, of which three constitute a quorum, is appointed, before whom copies of all Private Bills are laid by the parties promoting the same. They form the Bills into groups, fix the time for holding the first sitting of every committee, and refer every opposed Private Bill, or group of such Bills, to a chairman or referee and three members. Before this committee evidence is led by the witnesses for the promoters, and afterwards in opposed Bills by witnesses for petitioners against the Bill who have been given a *locus*. During the hearing of the case clauses are not infrequently amended or entirely withdrawn, and provisions are inserted for the protection of parties whose interests might, by the operations of the Act, be prejudicially affected, and after full consideration has been given to the representations made by all parties the preamble is proved, the Bill is promoted from the House in which it has been first presented to the other House, and when the Committees of both Houses, aided by expert witnesses and counsel, have shorn it of all inequalities and given it their approval, it receives the Royal Assent and becomes an Act of Parliament.

LANDS TO BE ACQUIRED.

Armed with the powers of an Act of Parliament the corporation acquire, by agreement when they can, or compulsorily and by the process of arbitration, the lands upon which the works are to be constructed, and lease or acquire those forming the watershed so as to give them absolute powers of control. Notices to treat, showing by plan the lands or easements to be taken, with a description thereof, are first served upon the owners and occupiers, and in due course claims are submitted which, if not accepted, are referred to arbitration. As a rule the lands so required are always specially valuable, and suddenly assume an enhanced value from the unwilling seller's point of view, and much ingenuity has been evinced by the variety and comprehensiveness of the claims made, which not unusually are as modest as that propounded by the late president of a republic, "for moral and intellectual damages." One of these is known as "special adaptability," and in the well-known case of *Ossalinsky (Countess) v. Corporation of Manchester*, raised in connection with the extension of the water area of Thirlmere, where a portion of the lands submerged belonged to Countess Ossalinsky, the principle was established that, in estimating the value of land and easements to be acquired by a corporation or company for the construction of a reservoir, the natural and peculiar adaptability for the construction of a reservoir of the lands in question is a fit and proper matter for consideration as an element in the value thereof in the assessment of compensation. The same point was raised and decided in the case of an arbitration between Gough and Aspatria, Silloth and District Joint Water Board. Such a claim ought not, however, in equity to be allowed, at least until the site has been proved to be

specially adapted, for a number of instances where the claim has been met it has afterwards been found necessary to abandon the site for [illegible] considerations.

CAPACITY OF RESERVOIRS.

In order to ensure a continuous supply of water to the town, or to provide the statutory amount of compensation water to the millowners, or both combined, it is necessary, with a limited drainage area, to construct reservoirs to impound the floods which at certain seasons flow off in volumes too large for the demands, and pay out the required amount during dry seasons or when the flow in the streams falls below such requirements. The function of a reservoir is to equalise the fluctuations of the yield of a watershed due to the ever-changing seasons, or to impound water in times of plenty, and dole it out in seasons of deficiency. The primary question as to the capacity of the intended reservoir must now be settled, and obviously its determination is dependent upon two circumstances—the extent of the drainage area and the climatic conditions. In this country it may be taken as a general rule that where the rainfall is least there the greatest amount of storage is required, and in hilly districts, especially in Wales and on the western side of England and Scotland, where the rainfall is greatest, the storage accommodation need not be so large as in the case of reservoirs built on the eastern and southern sides of this Island. In this district 180 days' supply is ample, but in certain places 250 and even 300 days' supply may be required.

RESERVOIRS.

In the selection of the site for a reservoir there are three principal considerations—the elevation, the configuration of the ground, and the foundations—the ideal site being at a sufficient altitude to ensure the gravitation of the water to the district of supply, and a sufficient pressure in the distributing mains at every point therein, and such that a large basin can be enclosed by embanking across a narrow, impervious defile or gorge.

Before finally deciding upon a site and the type of structure to be adopted, it is essential to prove the foundation as far as possible. Things are not always what they seem, and a site which on the surface may appear to be ideal may, on further investigation, prove to be altogether geologically unsuitable. It might not be uninteresting, if time permitted, to refer at some length to cases of disappointment and failure in reservoir construction arising from neglect to thoroughly investigate the foundations before proceeding with the works. The cases are so numerous in which it has been found necessary to excavate the puddle trench to depths greatly in excess of what had been anticipated or even to abandon the site after considerable expense had been incurred. Mr. Bateman, in his "History of the Manchester Waterworks," tells us that, in the case of the Woodhead reservoir (Longdendale Valley), the excavations disclosed a foundation so different from what had been expected that the first site selected had to be abandoned. At the Yarrow reservoir (Rivington) similar conditions led to the sinking of the puddle trench to a depth of 168 ft. below the surface of the ground; and so with Cant Clough (Burnley), sunk to a depth of over 200 ft.; Glengavel reservoir (Mid Lanarkshire); Dunton reservoir (Kilmarnock; Glenquoich reservoir (Dunfermline) for the naval base at Rosyth, on the Forth; and others. Many selected sites have been discarded before the commencement of the works on the evidence of borings or trial pits that a sound bottom could not be found within a practicable depth—*e.g.*, that for the intended reservoir in the Colsterdale Valley (Leeds), for the construction of which Parliamentary powers had been obtained, and which, on the evidence of several leading geologists, was an excellent site, was given up as being altogether unsuitable; and there are others which might be mentioned in respect of which large sums had been paid for the acquisition of the sites because of their presumed special adaptability.

The character of the foundation as well as that of the material available in the vicinity of the site are the chief factors to be taken into account in determining the kind of embankment which can most advantageously be adopted. Embankments are of two kinds—masonry and earthwork. While the earthen embankment is the older form (some of those built by the ancient Egyptians and Indians still remain), and fewer failures of this type have resulted, there are circumstances which leave an engineer no option in deciding which is the more suitable, because he is bound to utilise the materials which Nature has provided in the locality in which the proposed work is to be constructed. In clay and earth we know that there is an abundance of rock, or if the latter is so to increase that it is necessary, in providing for the escape of flood waters, to utilise the whole length of the dam as a waste-weir, or if the depth of the valley is greater than the height to which it is practicable or desirable to build an embankment of earthwork, or if the climate is extremely variable, and at times so hot that earth embankments built on a large scale would be liable to be seriously affected by the formation of deep cracks due to excessive evaporation, then a masonry dam is unquestionably the proper type to adopt.

There are excellent examples of both types in this country, such as the masonry dams of Burrator (Plymouth), Vyrnwy (Liverpool), Rhayader (Birmingham), Gouthwaite and Angram, in the Nidd Valley (Bradford), and the earthen embankments such as Woodhead reservoir (Manchester), Scout Moor and Ogden (Bury), Entwistle, Wayoh and Delph reservoirs (Bolton).

A detailed description of the method of constructing reservoir embankments is here quite impossible, but, briefly, a large earthen embankment may be described as consisting, in general, of a bank of earth formed across a valley to a height of not less than 5 ft. above top-water level, with a top width of at least 12 ft., and sloped downwards from the top on each face sufficiently below the natural angle of repose of the material forming it as to prevent slipping. The inner face, which is exposed to the action of waves, is protected by stone pitching. The watertightness of the embankment, on which the success of the work depends, is secured by a wall of retentive clay puddle which is carried from a solid stratum of rock, indurated shale, or boulder clay from below the base of the embankment right up through the centre of the bank to above the top water level. In some examples the trench is wholly filled with concrete, or, as to Delph reservoir works, the lower portion, which is narrower than the upper portion, is filled with concrete, and the upper section and wall are formed of impermeable clay. During the construction of the embankment the waters of the streams are carried off by means of a tunnel of sufficient area to cope with the largest expected flood, and which is ultimately utilised for discharging compensation water, and for receiving the conduit for conveying water to the town. From a tower the water is drawn off from the reservoir through valves fixed therein at different levels, so that the upper and most clarified waters may always be taken for consumption. An overflow or waste weir, wide enough to deliver the full run-off from the drainage area without endangering the stability of the embankment, is provided, and a bywash channel for excluding the first rush of flood waters from the reservoir itself is considered essential in all modern works.

In masonry we have a more reliable material than earthwork, and one in which the strains and pressures can be brought within the power of calculation and exact mathematical demonstration. There can be no doubt that if the depth of water to be retained exceeds 100 ft., a masonry dam is far safer, though probably more costly than an earthen embankment. It is, however, an essential condition of stability that the foundation be on a continuous impermeable rock; it would obviously be imprudent to attempt to construct a rigid masonry dam on a clay or gravel foundation, or upon one partly on rock and partly on soft shale; to do so would be to court disaster.

(To be concluded.)

Widening of Putney Bridge.—The Improvements Committee of the London County Council recommend that the preliminary works in connection with the proposed widening of Putney Bridge be undertaken at an expenditure of £1,500. The total cost of the complete improvement is estimated at £230,000.

Birmingham Sanitary Engineers.—A meeting of the Birmingham and Midland Centres of the Institute of Sanitary Engineers was held at the Exchange Restaurant recently. Mr. W. E. Farrer presided, and introduced Mr. C. E. Shackle, the new president, who thereupon took the chair. Mr. Shackle, who is the local resident engineer of the Great Western Railway, read a paper on "Timbering in Tunnels and Trenches."

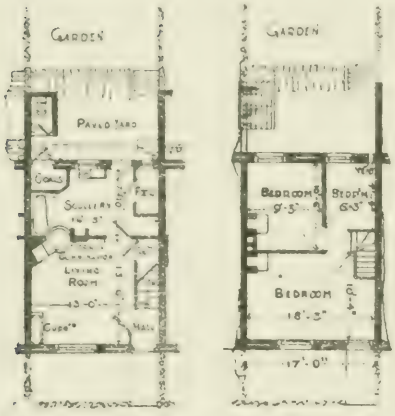
Each mortal spirit freely to his own
Concerning anything, or anybody
—MASSINGER. "The Fatal Dowry," Act II., 2

HOUSING OF THE WORKING CLASSES.

To the Editor of THE SURVEYOR.

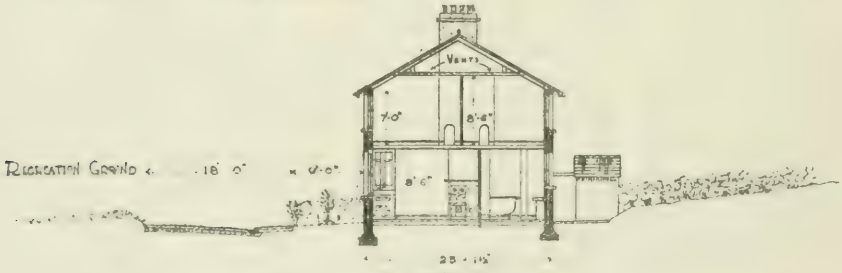
SIR,—I have perused your editorial comments on [illegible] Housing of the Working Classes [illegible]



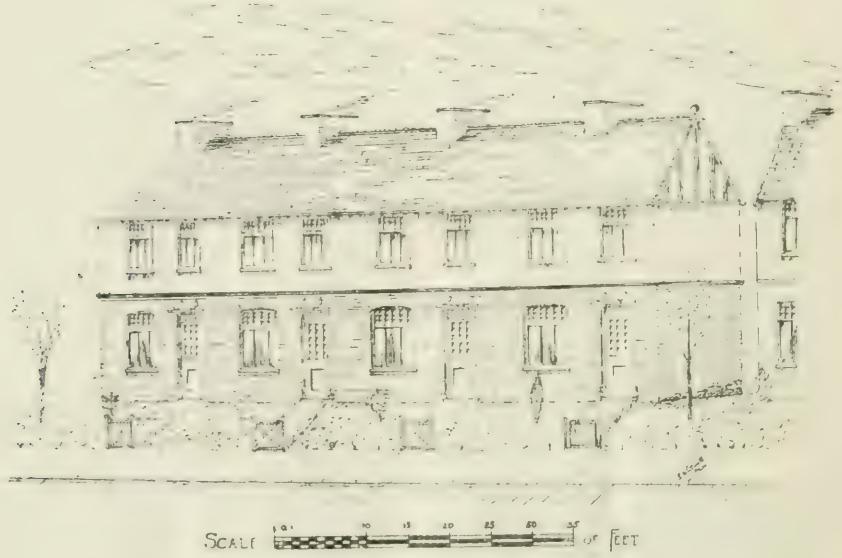
Ground Floor Plan. First Floor Plan.

In the first place, with regard to the closing of [illegible] the difficulties of which you state you have experienced in the Act of 1909, this was certainly a step in the right direction, but I am not disposed to attribute [illegible] any authority to have attempted in the past [illegible] that date to close up the accommodation of a character which would have been [illegible] to the requirements as would be [illegible] to contemplate—and this no council has attempted. Neither in the period referred to has [illegible] in any rapidly growing [illegible] done so much as to provide for the new requirements, much less to fully provide for the substitution of the old; therefore my contention holds good, that the shortage in a large number of districts has gradually become more acute and has done much to prolong the life of slumdom.

With regard to your disagreement "that good, serviceable, attractive houses may be built at a rental quite within the reach of those people for whom they are intended," and to your subsequent opinion, may I point out that my remarks cannot be interpreted as indicating too broad a generalisation? In my introductory remarks at the meeting of the Institution of Municipal Engineers I emphasised the fact that possibly many authorities were prevented from erecting cottages for labourers to let at rentals so high even as 4s. 9d. and 5s. 6d. by reason of a prevailing low wage, and that if such were the case the question became an economic one; in such case the health or the welfare of the tenants should not be sacrificed by the reduction of those necessary adjuncts to proper housing in order to bolster up and thus help to perpetuate a faulty economic system. What I desired by the reading of my paper was to emphasise the need of local authorities aiming at a much higher standard when undertaking housing schemes, and to indicate that many



Section.

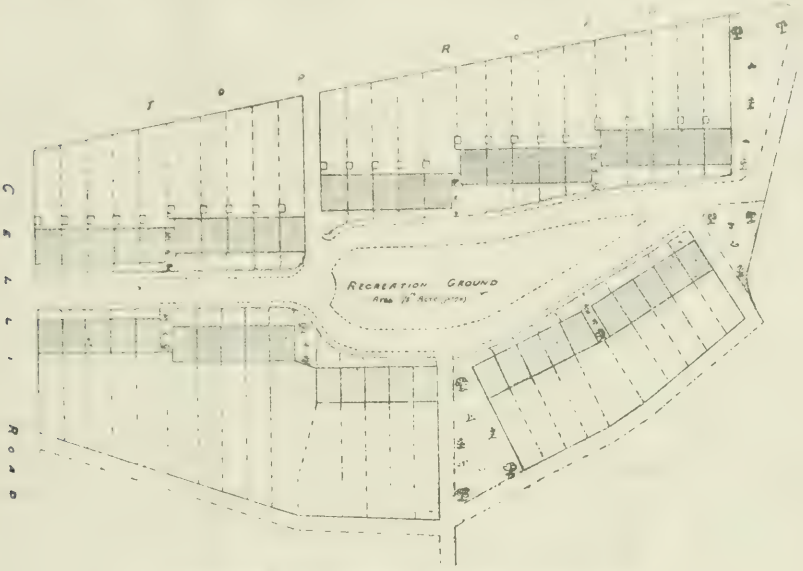


ABERSYCHAN WORKING-CLASS DWELLINGS.

and shall be obliged if you will allow me to make a few remarks thereon.

of the ideas of town-planning experts ... could be realised, and in some districts were ... more economically attractive than by following the stereotyped, monotonous structures of past working-class dwellings. As I said later, though at Abersychan not quite all the desired features had been secured, some idea of what has been done may be gathered from the accompanying set of plans, comprising (1) block plan of one scheme, (2) plan of house, and (3) the perspective of one block in another scheme. In the schemes for 200 houses now in course of preparation, I hoped to induce my council to aim at still better results. That something has been effected in the right direction your readers may form some opinion from the plans, and that some successful results have been attained may be gathered from the fact that at the end of the last financial year not one penny of rent was outstanding.

To sum up in a few words, the house which can be erected to let at 5s. 6d. per week, or at any other figure, in any district, may be just as economically provided by following the outlines I have given as



ABERSYCHAN WORKING-CLASS DWELLINGS—BLOCK PLAN.

by laboriously copying the monotonous structures and environments of the past generations.—Yours, &c.,

E. WHITWELL.

Abersychan, Mon.
December 15, 1914.

[Mr. Whitwell is to be congratulated upon his scheme, which has proved to be such a great success, from the point of view both of design and finance. As regards the effect of the closing order sections of the Act of 1909, a perusal of the editorial note in our issue of December 11th and of the above letter shows that we are really in agreement. Regarding the possibility of municipal building of cottages to let at economic rents, Mr. Whitwell has succeeded where many others have failed, a fact which he points out was noted in the earlier part of his paper. Our thanks are due to him for the drawings accompanying his letter.—ED.]

CONCRETE ROADS.

To the Editor of THE SURVEYOR.

SIR,—Adverting to the letter from the worthy president of the Institution of Municipal Engineers which appears in your current issue, I am quite aware that some sections of reinforced-concrete road surfaces have been laid in the ancient city on the Dee, and do not think it is claimed that those which are at present being laid in Kent are the "Alpha and Omega."

The reason it was specified for wet sand to be laid on the surface was because it was originally anticipated that the work would be done in warm, dry weather, and specially slow-setting cement is being used.

If Mr. Jones will look at your issue of the 4th inst. he will see that the surface dressing of sections Nos. 2, 3 and 4 is to consist of tar and ¼-in. limestone chippings, and not 1¼-in. chippings, but that the latter was a misprint; also that the surface of section 1 is not to be treated or dressed.—Yours, &c.,

H. T. CHAPMAN,
County Surveyor.

Maidstone.
December 19, 1914.

To the Editor of THE SURVEYOR.

SIR,—With reference to the experimental sections of concrete roads which are now being laid down in various parts of the country, might I say that concrete roads have been in use in the Edinburgh and Leith districts for at least thirty years?

They have been laid in various ways, some being finished with a rough surface composed of 2-in. road metal and cement, while others have had a smooth finishing coat of ¼-in. granite and cement.

The rough-finished concrete is open to the objection that stones here and there are knocked out by the action of the horses' hoofs, and the resulting holes soon become enlarged unless they are at once repaired. The smooth-finished cement wears much better, but does not afford such a good foothold for horses, though it is better than asphalt in that respect.

Concrete roads cannot be laid without joints, and herein lies their weakness. In course of time the edges of the joints become frayed owing to the action of the wheels and the horses' hoofs, and once the "skin" is broken the joint rapidly enlarges. To satisfactorily repair a concrete road necessitates keeping the traffic off for a week or ten days in order to allow the cement to harden properly. This is a serious drawback on a busy road. For side streets, with light traffic, concrete makes an excellent road, which is clean, dustless and comparatively noiseless. I have no experience of reinforced-concrete roads, as I believe reinforcement is unnecessary for light traffic; but concrete roads of any kind will, I believe, be found unsuitable for heavy traffic. In city roads, where the surface is being continually broken up to allow of the laying or repair of underground pipes, reinforcement will, I feel sure, be found to be unsatisfactory.—Yours, &c.,

J. R. FINDLAY.
Burgh Surveyor and Master of Works.

Leith.
December 22, 1914.

Institution of Municipal Engineers.

MEETING AT MANCHESTER AND SALFORD.

On Saturday, the 12th inst., a meeting of the Institution of Municipal Engineers was held at Manchester and Salford. Members assembled at the Midland Hotel, Manchester, and proceeded in a body to the offices of the Salford Corporation flag-making and cleansing works. Some seventy-five members, including their wives and friends, attended, among those were Aldermen A. Worsley (Manchester), Salford Corporation), Alderman J. Hulton (chairman, Cleansing Committee, Salford Corporation), Councillors G. Billington (chairman, Electricity Committee, Salford Corporation), W. M. Duxbury (Salford), S. Potter (Salford), T. Hargreaves (Salford), R. Hopwood (Salford), R. Williamson (Salford), Mr. W. H. Hamblett (superintendent, lighting and cleansing department, Salford), Alderman R. Grundy (mayor, Heywood Corporation), Alderman J. Hoyle (chairman, Health Committee, Heywood Corporation), Alderman F. P. Dixon (Carlisle), Messrs. W. Matthews Jones (city surveyor, Chester, president of the Institution), Horace Bell (London, past-president), A. R. Bleazard (Clitheroe, vice-president), Arthur Bowes (Newton-in-Makerfield, vice-president), W. Finch (Cumberland County, vice-president), John Robinson (Darlington, vice-president), G. W. Bayne (South Cleveland), J. Murray Kilbride, J. T. Davies (Little Hulton), J. Seddon (Prestwich), F. C. Martin (Blackburn), J. T. Sould (Blackpool), W. B. Butler (Cumberland County), Chas. Hinchliffe (Slaithwaite), G. H. Hopkinson (Chorley), J. W. Sunderland (Norden), F. W. Platt (Salford), J. S. Garment (Chorley), J. W. Gibson (Heywood), L. Walker (Stretford), A. Elder (Oldham), J. W. Wiles (Manchester), J. A. Wright (Great Crosby), A. Dempsey (Eccles), S. R. Aspinall (Manchester), and W. Briggs (Stockport), members; J. A. Robertson (Salford), H. J. Wilcox (Eccles), G. Dyson (Stocksbridge), John Park (Kirklinton), R. Stockbridge (Kirklinton), E. Johnson (Little Lever), J. Morris (Salford), G. Morris (Eccles), N. Clarke (Manchester, J. Blewitt (Urmston), S. T. Dunn (Eccles), and E. Ryder (Manchester), visitors; and R. J. Mess, Hyperion (late district secretary North Western District), and B. Wyand (secretary of the institution).

At the flag-making works the members were received by Alderman Hulton, chairman of the Cleansing and Lighting Committee of the corporation, who said that he thought they would see something good in the flag plant, and hoped it would be interesting and educational to them. He could not do more than give them a cordial welcome to all that they would see; but he would ask Mr. Hamblett, their superintendent of the Cleansing Department, to explain the [illegible] that connection was connected with the mechanical parts of the works, and Mr. Platt (who was one of the institution members) with the building portion. He was certain that both gentlemen would explain matters perfectly.

Mr. W. H. Hamblett, superintendent of the Salford cleansing and lighting department, said it would afford him great pleasure to show members of the institution the flag-making installation they were now visiting. For that building, the engine-house, and all the buildings necessary to the making and working of the hydraulic machinery the plans were prepared by their building surveyor, Mr. Platt. That gentleman also prepared the quantities, and it was pleasing to know that the works were completed at a figure below the approximate estimate which had been prepared on the instructions of the committee and the council. The mechanical portions of the works were arranged for and the designs carried out by their humble servant. He did not wish to take up their time by a description of the machinery, but thought a practical demonstration would serve a more useful purpose than anything he could say on the matter.

The following notes on the flag-making works-

PARTICULARS OF THE SALFORD CORPORATION FLAG-MAKING WORKS.

BUILDING SECTION.

At the February council meeting, 1911, the council gave authority, on the recommendation of the Lighting and Cleansing Committee, for application to be made to the Local Government Board to borrow money for the erection of the necessary building and chief-matic plant at Agecroft, and on February 24th the Building and Bridges Committee acceded to the request of the Lighting and Cleansing Committee to allow the building surveyor, Mr. F. W. Platt, to prepare the plans, &c., of the buildings.

In preparing the plans, consideration had to be given to the type of foundation, and the building surveyor recommended that reinforced concrete should be largely used, both in the foundation floors and in the retaining wall. The plans were then put in hand, and on May 8, 1911, they were approved by the Swinton and Pendlebury District Council. The building surveyor then took out the quantities. The tenders were advertised for; that of Messrs. Gerrard's was the lowest, and was accepted by the council at the December meeting, 1911.

Application was made to the Local Government Board in the following month, but the consent of the Local Government Board to proceed with the work was not received until July 3, 1912. The builders commenced their work—namely, the erection of five buildings and the boundary wall—on August 29, 1912.

The contract comprised the erection of seven buildings, a boundary wall, and a retaining wall. All the walls rest upon reinforced-concrete foundations, and all the floors are of reinforced concrete. These buildings contain the first reinforced-concrete floors constructed in any building owned by the corporation. At the mixing-house the suspended reinforced floor has a span of 27 ft. without an intermediate column, so that the press can freely work. The retaining wall near the boiler-house and the boiler-house have been built by the committee's own workmen. The wall is the first reinforced counterfort concrete retaining wall that has been erected by the corporation. Had it been constructed in ordinary concrete it would have needed to be at least three times its present thickness. It is strong enough to carry a motor lorry up to 30 tons in weight on four wheels—a great deal heavier than anything which will pass up the present roads.

By the culverting of a watercourse 400 yds. of land have been rendered available for the use of the depot, as well as giving access to a part upon which the drying shed has been erected. All the building work has been carried out under the direct supervision of the building surveyor.

ENGINEERING SECTION.

The machinery erected in the various buildings is as follows:

In Block 4 a clinker crusher with elevators to raise the crushed clinker to a perforated-iron screen, which screens the crushed clinker into three different sizes. The finest grade of clinkers is passed through rollers and ground to a sufficient fineness for the purpose of slab making, the other screened clinkers being of such sizes as can be put to economical uses in the borough.

In Block 2 the fine clinker is passed over a metallic separator, and raised from the point of discharging the clinker up to a mixing pan into which there is delivered the proportion of cement necessary for the making of concrete slabs. Both the clinker and cement supply are automatic, and discharge into the mixing pan in the proportions actually required. The mixture of clinker and cement having been completed, it is discharged through an aperture in the wall into a press-house (Block 1), where the three-mould press is situated.

The discharge mixture of cement and clinker is conveyed by a trolley from the point of discharge to the mould press. The press, which is worked by hydraulic power, is under complete control by valves, manipulated by a man standing at the side of the press. The working power of the press, mixers, crushers, screen and elevator is provided for as follows:

The clinker crusher, elevator, screen, and crushing rolls in Block 4 are worked by a horizontal steam engine in building adjoining, the steam being provided direct from the boiler fixed in connection with the refuse destructor.

The power for driving the metallic separator in Block 2, also elevator and mixer, is provided direct from the engine and dynamo in large engine-house

to a motor in Block 3, which will also drive the pumps required for the water supply to the accumulator, which is fixed in Block 3a. The upper portion of the buildings in Blocks 1 and 2 are used as stores for granite and cement. The granite is mixed with the cement for the purpose of forming a granite setting for the clinker slabs, and necessary tools are provided for the easy delivery of both materials from the hopper to the lower floor.

The engine for driving the dynamo is a high-speed vertical compound engine of 90 h.p. coupled to a Lancashire dynamo of the same power, and from these is obtained all the power necessary for working the pumps, mixer, metallic separator, elevator and accumulator; also the electric power necessary for lighting the depot, offices and stables. The steam for the engine is derived from the refuse destructor.

The following are particulars of the slabs: Granite face, $\frac{3}{4}$ in. thick; clinker, $1\frac{1}{2}$ in. thick; total thickness, $2\frac{1}{4}$ in. thick; mixture, 3 to 1; pressure on slabs, 2,240 lb. per square inch.

The corporation electricity works on Frederick-street, Pendleton, were next visited, and the members were received by the chairman of the committee, Councillor G. Billington, and Mr. J. A. Robertson, the electrical engineer.

Here Mr. Robertson particularly described a new 6,000-kw. steam turbo-generator which the corporation have recently installed. As the details of this installation were made public only a week ago, it is not necessary to go into them. It is sufficient to say that the visitors found this great engine working smoothly and satisfactorily.

RECEPTION AT SALFORD TOWN HALL.

After the inspection of the different works the members were accorded a civic reception at the Salford Town Hall by the mayor (Alderman A. Worsley). The members having signed his Worship's visiting book, the party adjourned for tea in the town hall canteen. Alderman J. Hulton presided, and at the commencement of the post-prandial proceedings the PRESIDENT said there was one sorrowful matter that he would like to bring before the members before they commenced the social programme. The members of the Northern District, in particular, were well acquainted with Mr. Pegge, the first president of the institution. Some six or eight months ago Mr. Pegge entered into matrimony, and it was with deep regret that they now learned that his wife had passed away. Were it not for this trouble Mr. Pegge would have been with them, and he thought they could not do less than send a note of condolence to him. Therefore he moved, with great regret, that such a note be sent.

Mr. H. BOOT (the ex-president), with a similar expression of sorrow, seconded the motion. Mr. Pegge, as their first president, had done much valuable work for the institution, and the members deeply sympathised with him in his bereavement.

The vote was carried in silence.

The CHAIRMAN said this was rather a melancholy commencement of their festive gathering, but he fully sympathised with their organisation in their sorrow at so great a bereavement in the family of their distinguished member.

Following the loyal toasts, Councillor DELVES proposed the health of the president, at the same time expressing wonder that such a task should have devolved upon him at a gathering of that kind. Perhaps it was because they were all brothers—were all engaged in trying to do what they could for the benefit of the communities in which they lived. He thought there was no greater work in which civil engineers or municipal engineers could be engaged than that which they were doing in the lighting, cleansing, tramways, gas, water and other undertakings of our various municipalities. He was glad to know that throughout the country—throughout municipal England—the death-rate of the various centres of the population was gradually, but surely, decreasing. It was an evidence of the grand and good work in which municipal engineers were engaged. He knew they did not want long speeches, but he wished both the members of this institution and all civil engineers to know that the members of the various councils of the country were largely dependent on the advice they gave with respect to adopting schemes and measures which would tend to the betterment of the various boroughs and cities in which they worked. The country owed a deep debt of gratitude to its municipal engineers, and therefore the borough of Salford was pleased to give an enthusiastic welcome to them. He asked them to drink to the president, Mr. Matthew Jones, and the Institution of Municipal Engineers.

The PRESIDENT said he could not refrain from saying how much and how deeply they felt the kindness extended to them on their thanking Mr. Delves for the very kind expressions he had used in regard to their profession. The Institution of Municipal Engineers was now in its sixth year, and they had a membership including members and associates—of about 900. Last year, when their friend Mr. Boot was president, they had at their annual gathering in London the Lord Mayor and Lady Mayoress of London, and, moreover, eighteen other mayors and mayoresses attended the function. On that occasion the Lord Mayor expressed the view that in the very near future no gentleman would be appointed to hold an official position under a council unless he was a member of an institution such as theirs. The members of the institution met to benefit each other, and to-day he thought it would be agreed that what they had seen at the works they had visited had taught every one of them something that they could take back to their own cities, boroughs or urban district councils, and bring to their notice with advantage. They could not only bring them to the notice of their own respective councils, but, if possible, try to improve on what they had seen, or get them to adopt something on similar lines. They did not always meet to have politics—or this kind, but they did meet to consider the best thing they could do for the benefit of the councils which they represented. He again thanked Mr. Delves very sincerely for proposing the success of the institution, but before he sat down he had another duty to perform. This was to propose the health of his Worship the Mayor of Salford. He thought his Worship would be aware that borough surveyors generally were not what they in Cheshire called "possessed of the gift of the gab." They could not talk in public—it was not their line. But if he got his Worship in his own office, talking on the business of a surveyor, he would guarantee to prove quite as capable at it as any member of a council. And he thought it was the duty of every member of that institution to make himself capable of talking on these occasions—in other words, thoroughly to understand his business and know what he was talking about. He should be able to discuss promptly and readily any matters that came before him and give his judgment without any "humming and hawing"; in short, he ought to be at a position to say at once what was right or wrong, and advise his committee accordingly. They had seen at the Salford works two very large undertakings, and he was sure that the greatest credit was due to the officials who had been responsible—and were still responsible—for the running of these works. They had the control and management of many thousands of pounds' worth of building and machinery in their hands, and only capable men such as they had got in their corporation could run such great works. He thanked his Worship again for the way in which he had received the institution, and assured him that it gave them great hope to know that they might take home the knowledge they had gained that day, and be able to distribute it among their fellow members through the medium of papers and speeches.

The MAYOR, responding, assured them that the little he had done in extending to them a welcome he did with great cordiality and pleasure to himself. He felt it his duty to extend any hospitality he could to such representatives of municipal institutions as were present, and he should have been very sorry indeed if on a visit to Salford any such important body of public servants had not received a civic welcome. He was glad they had seen the new turbo-generator which he had had the privilege of starting last week, and which the Electrical Committee claimed would save a lot of money for Salford, besides supplying electricity at about cost price. He wished every success to the institution.

Mr. H. BOOT (past-president) proposed success to the Salford Corporation undertakings, committees and officials, including Alderman Hulton (chairman Cleansing Committee), and Councillor Billington (chairman Electricity Committee). To realise the value of the undertakings they had seen that day they needed to go back many years before the great wave of municipalisation came about, when our streets were in darkness, when our children were

ward in the interests of the ratepayers—energies which were rarely appreciated—and gave their services for nothing. With regard to their day's visits, their thanks were due to their chairman for the kind way in which he had allowed them to inspect what [illegible] to trespass on their time by going into figures, but it was sufficient to know that the machinery they [illegible] become much larger in the future. His friend Mr. Billington, the chairman of the Electricity Committee, had always taken the greatest interest in that undertaking. He could remember the time [illegible] state of efficiency, but Salford then had not realised that if they wanted the best men in the engineering line they must pay for them. They had, however, [illegible] get a municipal man who would work for the municipality with the same devotion as he would for himself, they must pay him well, and that if they had not a really good man it was very difficult to get rid of him. (Laughter.) Some years ago the reputation of the Salford electricity undertaking was notorious in the engineering world, and its recovery from that position of disgrace to one of high efficiency now was largely to the credit of Councillor Billington. He had been chairman of the committee for five or six years, and had had a very uphill [illegible] companies, who would have liked to have swallowed up Salford's undertaking, and probably would have done so but for the strenuous opposition of Councillor Billington. They had recently started a very large turbine, and they had only to consider it and compare its capital outlay with that of its predecessors to realise what great economies were being effected in the manufacture of electricity. The cost of electricity in future must come down by leaps and bounds—an opinion in which he was sure their new engineer, Mr. Robertson, would uphold him. He congratulated the borough on having secured the services of his old friend Mr. Robertson, and he advised the borough to stick to him. He had made a great name for himself in Greenock, where he was most highly respected, and if ever they were foolish enough to let him leave Salford he would leave an even greater reputation behind him. They were also indebted to Mr. Hamblett and Mr. Platt for the admirable buildings and mechanical plant they had shown in their department. Their perfect equipment showed that, in the appointment of such able men as their officials, the mayor, aldermen and council of Salford showed great wisdom, and knew how to use the great power which, as citizens of the Empire, was vested in them.

Acknowledging the toast, Councillor GEORGE BILLINGTON observed that when they looked at the wonderful strides which were being made in engineering, it was not surprising that machinery soon got out of date. Happily, they were now getting away from their bad reputation. He was sure those interested in electricity would learn something from seeing their new unit, the 5,000-kw. turbine. They would have learned that it was possible to generate as much current, and have the same consumption throughout the whole of Salford from the one unit as from all their other generators combined, and this, moreover, at a price of £14 per kilowatt compared with £28. That would have a tendency to reduce the prices of current. He believed if they generated current at the lowest possible prices it would induce the owners of large works to come into the town, and so bring more labour and the circulation of more money. He could assure Mr. Boot that Salford knew they had in Mr. Robertson one of the best engineers of the country, and he was going to bring Salford out on top in matters of electricity. It was now about the fifth from the top throughout the country, whereas it was once the fifty-fifth. He could assure them that his committee greatly appreciated such visits as theirs very highly, especially when the visitors were engineers who understood the subject.

Alderman HULTON, replying on behalf of the Cleans[illegible] referred to the [illegible] time when the mayor, Mr. Hamblett and himself first entered the council, Salford's death-rate had gone down from 28 in the 1,000 to 15, and he thought the cleansing department had had some part in reducing the death-rate. He was glad to hear that they had learned something in their inspection of the slab-making plant, which he believed was one of the best in the country. They had visited many towns and seen other plants and improved on them, and in this connection he would like to say how gratifying it was that corporation officials and corporations throughout the country were always ready to impart their knowledge to others, so that the whole community should benefit from their experience. Their council had recently agreed to submit their slabs to certain tests, and he was glad to say that they had come through them with far better results than they had anticipated. It might interest them to know that Salford was the first town in the country to put into operation the Free Libraries Act, and was one of the first to light the streets by gas, besides being the actual first to intercept sewage.

Mr. A. R. BLEAZARD (Clitheroe), chairman of the North-Western District, proposed the health of Mr. McKenn, the district secretary, who, in the course of a suitable acknowledgment, said he had worked the more keenly to make that evening a success, because, though he now belonged to Heywood, he was on his native heath. He was born and educated within a stone's-throw of that building. He urged upon members the necessity of attending more closely to their duties as members of that institution, and said it was only by doing so that they could achieve the greatest benefits for themselves and those whom they served.

Mr. HAMBLETT, acknowledging the remarks on his department, said if the time ever came when he should have to leave his present office, nothing would give him greater pleasure than again to enter the council and give his services free to the community. Proceeding to describe the slab-making works, he said they had secured in the plant which they had seen a very profitable asset. Though they saw a large amount of unused clinker on the tip, they did not feel alarmed or fear that they would not soon get rid of it, and as many slabs as they could possibly convert it into. Some towns with slab plants had made the mistake of using clinker too quickly after it left the destructor furnaces, and another mistake they made was in not taking out the iron. Their slab-plant buildings had cost £4,000, and the plant itself something like £3,000. When they applied for powers to manufacture and sell slabs and mortar, the Government inspector told them they could not get powers to sell, but happily they were able to tell him that two days previously they had obtained Parliamentary powers to do so. They could therefore sell either to other municipalities or private firms. Their installation was the best and most economically worked in the country, and they hoped eventually to sell to such profit that they would be able to pay over something towards the relief of the rates. They were able to sell them to their own corporation committees at 2s. 8d., and to outsiders the charge would be a little more. If they honoured him with inquiries, he would be glad to quote prices. He advised them never to use a slab until it was twelve months old, and if they could get it three years old all the better. In the tests that had been made at the Manchester School of Technology their twelve-months'-old 2-ft. slab was found to have a central breaking load of 5,970 lb., while used as a beam it bore a load of 4,300 lb. Mr. Platt, their building surveyor, who was a member of that institution, regarded this as a very satisfactory test. A slab made from pure clinker, without cement facing, bore a breaking load of 4,920 lb., and 3,140 lb. used as a beam. These latter could be sold cheaper than 2s. 8d. In manufacture they had tried, as far as possible, to do away with the human element, and in a little time, when the business got thoroughly going, he was confident they would be able to show good results that would be satisfactory to their council. They were now making per day an average of 350 2-ft. slabs, 300 2-ft. 6-in., and 270 3-ft., and those results were got without harassing the men, who worked in a quiet, steady manner without any sweating. Referring to the imitation granite walls which had been seen at the works, Mr. Hamblett said they hoped shortly to instal a plant with which they would improve on that artificial stone, and be able to produce from the destructor clinker, and very little else,

The Surveyor
And Municipal and County Engineer.

a pure, strong, white stone, with which they would be able to build bright, clean houses, and bring about brighter and cleaner towns.

Mr. J. A. ROBERTSON acknowledged the remarks made about the electricity department which he controls. He did not agree with the view that a few years ago that town deserved its notorious reputation in regard to electricity. He believed the verdict was [illegible] Anyhow they were now taking steps which would bring them into line with the best in the country, and that would enable them to supply electricity at a price so low that all manufacturers would want it. He had had some conversation as to the objects of their institution, and he had come to the conclusion that it could only be beneficial to the various branches of municipal activity in which they were engaged as engineers. They would hear more of the use of electricity in all industries in future, and he was glad that the municipal engineers of different departments were among the first to recognise and adopt its uses.

During the evening vocal contributions were given by the Heywood Orpheus (Male Voice) Glee Party, while two of its members, Messrs. T. Fogg and C. K. Holden, contributed a number of songs and duets.

Water-softening Plant.—The gratifying increase of activity in many of the manufacturing industries during the past three months is well exemplified by the large number of orders now being placed in this country for water softeners and purifiers, feed-water heaters, &c.—a sure index of works extensions on a large scale. We are informed that since the outbreak of war Messrs. United Water Softeners, Limited, the well-known makers of "Lassen-Hjort" and "Permutit" water softening and purifying plants, have entered into contracts to erect over 100 installations, totalling several millions of gallons daily, for firms in the United Kingdom. Prominent among those who have placed orders for softening plants are the Admiralty (30,000 gallons per day), Vickers, Limited (14,000), Armstrong, Whitworth & Co., Brunner, Mond & Co. (500,000), the *Daily Chronicle* Paper Mills (240,000), Bickershaw Collieries (Ackers, Whitley & Co., 360,000), the North-Eastern Railway (96,000), British Portland Cement Manufacturers (12,000), Merryweather & Co. (8,000), Curtis & Harvey (19,000), Sir Joseph Lyons & Co. (24,000), and the Erith Oil Works (192,000). The considerable extent to which such labour-saving and waste-eliminating appliances are adopted in this country is in itself a refutation of the oft-repeated assertion that British manufacturers are backward in utilising scientific methods of economy in their works processes.

THINGS ONE WOULD LIKE TO KNOW.

(Contributed.)

When will the Local Government Board take a more enlightened view as to the life of reinforced concrete? Has not the time arrived when it might be suggested to those in authority that it would be well to appoint a Departmental Committee to investigate the question thoroughly, to hear witnesses, to inspect various works, to obtain information by correspondence, and generally to investigate the matter on practical and scientific lines? Would not a report from such a committee be of extreme value to engineers and others?

* * * *

Is not the district council of Kidderminster to be heartily congratulated on the manner in which they deal with those of their employees who enlist? Would it not be well if all local authorities were to follow the example of Kidderminster, and encourage enlisting by their servants in every possible manner?

* * * *

In view of the evident unfairness of charging for water supply on the basis of the rateable value of the premises so supplied, why should not all water be supplied in the same manner as gas or electricity—viz., by measure? Is it not rather a bogey to assume that if water were supplied by meter an insufficient quantity for sanitary purposes would be used? Would not such a method of supply largely curtail the enormous waste of water that is going on by day and night throughout the country? Is it not difficult to break down habit and custom?

* * * *

Is it not evident, in following Dr. Boobbyer's annual report of the health of Nottingham, that enteric fever clings to the dwelling houses where "pails" and not water-closets are installed? Does it not seem curious that, although the council of Nottingham give a subsidy of £2 10s. for every pail-closet converted into a water-closet, there should still be more than 34,000 houses in Nottingham provided with these obsolete obscenities? When will the Local Government Board be sufficiently stiff-backed to pronounce the so-called dry system of "interception" as absolutely insanitary, and set their official face dead against it?

* * * *

Is it any cause for surprise to see by the daily papers that the roads in Northern France have entirely given way under the stress of battles, and that they are to be reconstructed temporarily with sleepers—in fact, made into American corduroy roads? In addition to the thousands of picks and wheelbarrows that it is said are to be sent from England at once, would it not also be well to send about half-a-dozen civilian road experts as well to advise as to what should be done?

* * * *

Is it a fact that the Baltic timber trade is mainly controlled by Germans—not merely at the moment by reason of the blockade they have declared, but in ordinary times? Of course, this will be true so far as shipments from Dantzic and Memel go, but it is stated on good authority that the ubiquitous German has controlling capital interests both in the principal Russian and Swedish timber companies and in timber shipping. If this is so, will the effect not be detrimental to the future use of wood blocks for paving purposes, having regard to the fact that these are mainly cut from timber emanating from Baltic ports? Is it not to be hoped that it may prove possible, by means of the new powerful Canadian ice-breakers which are now at work trying to maintain an open passage through the ice to the White Sea, for timber shipments to continue to come in sufficient quantities from Archangel? But is it a fact that, as a rule, trees grown in such far northern latitudes do not mature to sufficient size to be suitable for cutting wood blocks?

* * * *

As "it is an ill wind that blows nobody good," may not one result be that we shall encourage Colonial timber growers to meet our requirements? Should not Canada be able to furnish suitable timber for wood paving blocks at a reasonable price? May it not also mean a revival of favour for Australian wood? Anyway, is it not certainly desirable that our money should go into the pockets of our Colonial cousins rather than to support aliens—enemies or otherwise?

Assistants' and Students' Section.

CONDUCTED BY SYDNEY G. TURNER, ASSOC.M.INST.C.E.

All communications in regard to this page must be addressed to The Editor, St. Bride's House, 24 Bride-lane, Fleet-street, E.C. *Envelopes must be marked "Assistants' Section" in the top left-hand corner. Correspondents are invited to submit questions for consideration and answers to the questions which appear. For the contributions considered to be the most meritorious, one or more premiums in books will be awarded monthly. Diagrams must be drawn to scale on separate sheets, ready for reproduction.*

QUESTIONS.

This week answers are invited to the following questions:—

445. Cement Testing. State, and describe the apparatus necessary for conducting the tensile strength test specified for Portland cement.

446. Materials. What is Mexican mahogany? Is it a typical pine? Is Lebanon cedar known as a specially valuable timber? Is the best white pine from Mexico? (H. F. W., *Tottenham.*)

447. Geodesy. Explain how the height of a mountain may be calculated by triangulation. What is meant by a "base of verification"?

448. Hydraulics. Explain and illustrate by reference to a channel of rectangular section, 12 ft. wide and 3 ft. deep, the terms "hydraulic mean depth" and "slope," as used in connection with the flow of water, and approximately to what extent the mean velocity of the stream would be affected by widening it to 24 ft., assuming the depth and inclination to remain the same. (A.M.I.C.E.)

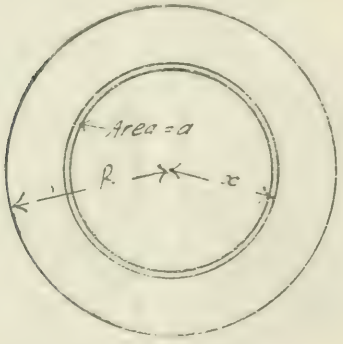
449. Roof Truss.—Sketch a light iron roof truss of a span of 20 ft., and give enlarged details of the joints.

[The Editor is at all times glad to hear from readers who desire to submit questions regarding matters of general interest, points of daily practice, &c., for insertion in the "Assistants' and Students' Section." Questions which are published are taken into consideration, as well as other matter, in awarding the Monthly Premium.]

REPLIES TO QUESTIONS.

444. Strength of Shaft.—Find the relation between the stress on a twisted shaft and the moment producing it. Find the least diameter of a solid steel shaft to transmit 269-horse power at 150 revolutions per minute, the stress being limited to 9,000 lb. per square inch.

Take the case of a solid circular steel shaft subjected to a twisting moment or torque T lb.-in. To determine its moment of resistance, first consider the force on an elementary ring infinitely small in thickness, of radius x in. and area a sq. in.



Let f_1 = shear stress on element.
f = shear stress on the extreme fibres, lb./in.^{2}
l = radius of shaft, inches.

Now the strain varies directly as the distance from the axis of revolution—*i.e.*, the centre of the shaft; also provided the limit of elasticity is not exceeded, the stress varies directly as the strain; hence—

$$\frac{f}{R} = \frac{f_1}{x} \quad \therefore \quad f_1 = \frac{f}{R} \cdot x$$

The total force on the element $= a \cdot \frac{f}{R} \cdot x$

The moment of this force about the centre of the shaft $= \frac{f}{R} \cdot a x^2$, and consequently the moment of the internal forces over the whole cross-section

$$= \sum_0^R \frac{f}{R} \cdot a x^2 = \frac{f}{R} \sum_0^R a x^2 \quad \text{But} \quad \sum_0^R a x^2 = I_p \text{ the moment}$$

of inertia or second moment about the axis.

The twisting moment = the moment of resistance $T = I_p \frac{f}{R}$. Now for a solid circular shaft it can easily be proved that $I_p = \frac{\pi R^4}{2}$ and $T = \frac{\pi R^3}{2} \cdot f$, the formula required.

The horse power H = the torque (lb.-ft.) × angular velocity (radians per minute) ÷ 33,000.

The torque $= \frac{T}{12} = \frac{\pi R^3}{24} \cdot f$ lb.-ft.

and the angular velocity $= 2 \pi n$ radians/min.

$$\therefore H = \frac{\pi R^3 \cdot f}{24} \cdot \frac{2 \pi n}{33{,}000} = \frac{\pi^2 R^3 \cdot f \cdot n}{396{,}000}$$

$$R = \sqrt[3]{\frac{396{,}000\ H}{\pi^2 \cdot f \cdot n}}$$

By inserting the numerical values given in the question we get

$$R = \sqrt[3]{\frac{396{,}000 \cdot 269}{10 \times 9000 \times 150}} = 2 \text{ inches}$$

∴ diameter of shaft = 4 inches.

(H. F. W., *Tottenham.*)

Let Fig. 1 represent two pieces of shafting provided with disc coupling as shown, one disc being

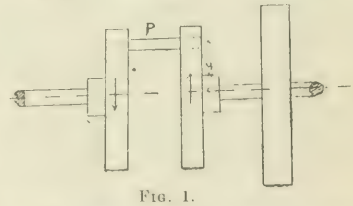


FIG. 1.

driven from the other through the pin P, which is obviously in shear. Let the shearing resistance of pin = S.

Then from the figure $W l = S y$.

If area of pin $= a$, and shearing stress on pin $= f$, we have $W l = f \cdot a y$.

Referring to Fig. 2, in which there are two such pins, the case is

$$W l = S y + S_1 y_1 = f a y + f_1 a_1 y_1$$

The dotted circles in Fig. 3 are to represent the position of the pinholes in the other disc.

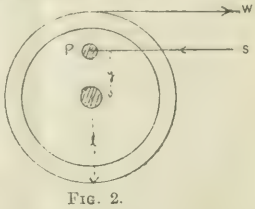

FIG. 2.

Before the force W was applied, the pinholes coincided, and were exactly opposite each other; but after the application of W the shear of the pins

caused a small movement of the one disc with respect to the other.

It is evident that the strain varies directly as the

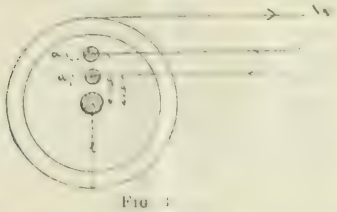

Fig. 1.

distance from the centre of the shaft.

When the material is elastic, by Hooke's law (strain = the stress varies directly as the strain).

$$\frac{\text{stress}}{\text{strain}} = \text{or} = \frac{f_s}{\theta}$$

Substituting, we have

$$W = \frac{\pi}{32} \cdot \frac{d^4}{d} \cdot f_s \cdot \frac{2}{d}$$

$$= \frac{\pi}{16} \cdot \frac{d^3}{d} \cdot f_s \quad (\text{i.e., } \frac{I_p}{y} \cdot f_s)$$

Let $\frac{I_p}{y} = Z_p$

Then, if the pins be equal in area, so that $a = a'$,

$$W = f_s a r + f_s \frac{a r^2}{d} = f_s a r (1 + \frac{r}{d})$$

It is interesting to note from this result that the addition of the pin has only increased the strength by one-quarter.

Take next a like arrangement of pins, but in this case let the number be great—such a number as to make a solid or hollow section.

Let the area of each pin or element be a, a', a'', &c., distant r, r', r'', &c., respectively, from the axis of revolution.

As above, we have

$$W = \frac{f_s}{r}(a r^2 + a' r'^2 + a'' r''^2 + \text{&c.})$$

But the quantity in brackets is the polar moment of inertia of the section.

Let it equal I_p.

Then we have

$$W = \frac{f_s I_p}{r} = f_s Z_p$$

f_s = the maximum or skin stress on the material, and r is the distance of the skin of the shaft from the axis of revolution.

Also $\frac{I_p}{r}$ = polar modulus of section

$= Z_p$

The above result can be stated as follows:—

Twisting moment = skin stress × polar modulus of the section.

The formula for a solid shaft is—

$$63025 \frac{\text{H.P.}}{N} = \frac{\pi}{16} f_s D^3$$

where H.P. = horse power to be transmitted

N = number of revolutions per minute of shaft

f_s = maximum stress allowable in shaft in lb. per sq. in.

D = diameter of shaft in inches.

In this case we have (by substitution)

$$\frac{63025 \times 269}{150} = \frac{3{\cdot}142 \times 9000 \times D^3}{16}$$

$$\therefore D^3 = \frac{16 \times 269 \times 63025}{150 \times 3{\cdot}142 \times 9000}$$

$$\therefore D = \sqrt[3]{\frac{16 \times 269 \times 63025}{150 \times 3{\cdot}142 \times 9000}}$$

$$= \sqrt[3]{61}$$

$\therefore$ D = 4 inches

$\therefore$ required diameter of shaft = 4 inches.

(B. K., *Hons.*)

The Proposed Trent Navigation Improvement. Although the requisite parliamentary steps had been taken, the Nottingham Corporation have declined to proceed further with the proposal to spend £150,000 in improving the navigation of the Trent.

SALARIES IN DEVON.

"OVERPAID" ON £120 A YEAR.

At the last meeting of Bideford Rural District Council Mr. W. Hore presiding, the Highways Committee reported that the salary of the surveyor, Mr. L. Turner, be increased from £120 to £150 per annum, as from 1st January last, in accordance with the recommendation of the Finance Committee, and that he be paid £30 per annum for his services commencing from 31st inst.

Dr. Stevenson, who moved the adoption of the report, said they could not get away from the fact that they were not overpaying their surveyor.

Mr. Slee said it was not twelve months ago that the surveyor's work was reduced by all the main roads in the district being taken over by the county council, and their surveyor was now better paid than he was before when he had to look after the roads, for only £20 more.

Mr. J. T. Jewell said the salary was ample for what the surveyor did.

Mr. J. Vanstone thought the surveyor could get about more among the men and not write them letters to say when he was coming.

The recommendation was defeated by ten votes to five, and the chairman informed the surveyor of the result.

Mr. Turner: I have nothing to thank the council for, then, have I?

DEATH OF MR. DAVID BALFOUR.

Mr. David Balfour, M.Inst.C.E., senior partner of the firm of Messrs. D. Balfour & Son, Newcastle-on-Tyne, died on Tuesday, we deeply regret to learn.

Mr. Balfour carried out a very large number of engineering works in many parts of England and Scotland, including bridges, sewerage and sewage disposal works, water supplies, tramways, railways, shipping stathes, and shipbuilding yards. For a number of years, however, the work of the firm has been carried on by his son, Mr. David Balfour, junr., M.Inst.C.E.

Mr. Balfour gave evidence before many Royal Commissions, and contributed a number of papers to different scientific societies in both England and Scotland.

Midland Municipal Schemes.—The Smethwick Corporation have decided to promote a Bill in Parliament for authority to execute a score or more of street widenings to accommodate tramway and motor traffic; for enlarged powers with respect to streets and buildings, gas, abattoirs, tramway waiting-rooms, and the public library rate. The Wolverhampton Corporation seek further powers with respect to the construction of waterworks in Staffordshire and Shropshire. The Stafford Corporation ask for the confirmation of a Provisional Order to authorise the extension of the borough boundaries and for further powers in regard to the gasworks. Bills are also being promoted by the Shropshire County Council and the West Gloucester water undertaking.

A Footpath Action. In the Chancery Division on Monday, Mr. Justice Sargant delivered his reserved judgment in the action brought by the Attorney-General, at the instance of the Knottingley Urban District Council and by the council, against Mr. Fred Roe, coal merchant, Knottingley, for a declaration that it was the duty of the defendant, as proprietor of a worked-out limestone quarry adjoining a public footpath known as England lane, to erect and maintain a wall or other obstruction to prevent the path subsiding into the quarry to the danger of the public. It was explained that a considerable portion of the original wall had collapsed, with the result that a section of the footpath had fallen into the quarry, constituting a grave nuisance and danger to the public. The action was not defended, but, his lordship feeling some doubt as to his power to grant the relief claimed, the case was argued at length by Mr. Romer, K.C., for the plaintiffs, and judgment was reserved. Mr. Justice Sargant now said he was satisfied on the authorities that the plaintiffs were entitled to the relief sought, and made a mandatory order on Mr. Roe to abate the nuisance by removing the footpath and erecting a retaining wall or similar obstruction to safeguard passengers using the path. The defendant was ordered to pay the costs of the action.

LOCAL GOVERNMENT BOARD INQUIRIES.

The Editor invites the co-operation of Surveyor readers [illegible] to forward for publication [illegible] as complete and accurate as possible.

INQUIRIES HELD.

Bridgwater T.C. (December 14th. Mr. W. M. [illegible] the officials in attendance, and it was stated by the [illegible] district concerned, to get the sanction of the board [illegible]

Darlington T.C. (December 15th. Major J. [illegible] at the Bank Top Mart. The scheme was opposed by the [illegible]

East Riding C.C. (December 15th. Mr. A. S. [illegible] £4,000 to purchase Raywell House for the purposes of carrying on the site a sanatorium for the treatment of tuberculosis.—It was stated on behalf of the council that Raywell House was the most suitable site for the purpose available. It stood 225 ft. above the sea level. There was an ample water supply on the premises, but to avoid any possible danger of pollution it was proposed to obtain a supply from the Hull Corporation. The provision of an adequate [illegible] drainage would be a serious expense, and in consideration of that the vendor had agreed to reduce the purchase price from £9,000, the original figure, to £5,400.

Lowestoft T.C. (December 16th. Mr. A. W. [illegible] £5,000 for the construction of a new road from the Waveney-drive to the ice works, and £500 for works of piling at the Waveney-drive Embankment.—The borough surveyor, Mr. G. W. Hamby, submitted the plans of the proposed scheme.

Manchester T.C. (December 17th. Mr. W. O. E. Meade-King).—£14,110 for works of private street improvements.—Mr. Heath, deputy town clerk, appeared for the corporation, and evidence in support of the application was given by Alderman Jones and Alderman Turnbull, the chairman and the deputy chairman of the Paving and Highways Committee, and Mr. Meek, deputy city surveyor. There was no opposition.

Yarmouth T.C. (December 8th. Mr. R. H. Bicknell).—£800 for the purchase of land at Caister-on-Sea for the extension of the cemetery.—The borough surveyor, Mr. J. W. Cockrill, stated that the nearest well to the existing cemetery was 160 yds., and another 200 yds. from the new portion. The distance from the nearest inhabited part of the borough was 3 miles. The medical officer of health, Dr. A. N. Stephens, said he considered the site a suitable one for a burial ground.

York T.C. (December 21st. Mr. W. H. Collin). —£6,214 for the purchase of 48 acres at Hewarth, for the purpose of providing working-class dwellings.—The city engineer, Mr F. W. Spurr, stated that the land, which belonged to the Ecclesiastical Commissioners, was the best obtainable. There was other land, but the price was prohibitive.

APPLICATIONS FOR LOANS.

Barrow-in-Furness T.C. £1,500 for works in connection with a public park.

Beckenham U.D.C.—£710 for making up Arrol-road.

Goole U.D.C.—£6,000 for a sewerage scheme, and £1,000 for [illegible] works.

Lichfield T.C.—£4,100 for twenty working-class dwellings.

Meriden R.D.C. [illegible] the Hampton-in-Arden sewage disposal scheme.

Newton R.D.C.—£3,100 for a water supply for [illegible]

Nuneaton T.C.—£600 for a steam cart for stone [illegible]

Paignton U.D.C.—£235 for concreting footpaths.

Rathdrum R.D.C.—£700 for sewerage works.

Southampton T.C.—£300 for laying out a burial ground, and £60 for sewerage works.

Stoke-on-Trent T.C.—£12,230 for the purposes of [illegible] undertaking, and £1,141 for the purposes of a [illegible] for a refuse destructor.

Westhoughton U.D.C. — £1,400 for a refuse pulveriser.

LOANS SANCTIONED.

Cardiff T.C.—£28,000 for new mains and services.

Carlisle T.C.—£885 for a new street.

Clitheroe T.C.—£1,200 for road improvement.

Croydon T.C.—£60,131 for paving works.

Ealing T.C.—£2,000 for the extension of the destructor at the southern sewage works.

Eccles T.C.—£3,000 for electricity mains, and £450 for a coal conveyor and [illegible]

Esher and Dittons U.D.C.—£1,250 for making up two roads at Claygate.

Hayward's Heath U.D.C. £500 for laying out a cemetery.

Holywell U.D.C.—£14,000 for a water and drainage scheme.

Hungerford R.D.C—£1,500 for the erection of working-class dwellings.

Hunsworth U.D.C.—£4,700 for a sewerage scheme.

Mansfield T.C.—£4,000 for gas stoves.

Middlesex C.C.—£1,460 for a tuberculosis hospital and dispensary at Hounslow.

Portland U.D.C. — £5,162 for the erection of municipal offices.

Yarmouth T.C.—£4,140 for public baths, and £4,500 for the construction of a promenade and lawn.

The Sportsmen's Corps.—Attention is drawn to the advertisement in another column of an appeal on behalf of the Sportsmen's Corps, for which a second battalion is being raised. The first battalion is in training under excellent conditions at Gray Towers Park, near Hornchurch, Romford, and Mr. Walter Maughan, hon. examiner to the Institution of Municipal Engineers, is desirous of emphasising the advantages of the corps to municipal surveyors and their assistants, in the hope of eventually forming a Surveyors' Company. The corps consists almost exclusively of sportsmen and professional men.

Municipal Work in Progress and Projected.

The Editor invites the co-operation of SURVEYOR *readers with a view to making any information given under this head as complete and accurate as possible.*

BUILDINGS.

Banbridge (Co. Down) U.D.C.—The council have [illegible]

Devon C.C.—It is proposed to purchase Egglesford [illegible] as an asylum for mentally defective patients.

East Ashford R.D.C.—The sanitary surveyor, Mr. T. H. Wilde, submitted recently the plans and specifications for a proposed [illegible] at Mersham, mentioning that the well excavations had reached 6 ft., and [illegible]. The specifications and plans were approved, and the council decided to advertise for tenders directly the county medical officer had signified his approval.

Flintshire C.C.—It was stated at a council meeting that [illegible] bridge will have to be erected at [illegible] Ferry to connect Flintshire with the Wirral Peninsula. The cost will probably be about £22,000.

Lockerbie T.C.—A scheme has received approval for the erection of public slaughter-houses at an estimated cost of £1,200.

Ramsgate T.C.—It is proposed to expend £1,300 in [illegible] for bathing huts.

Rhyl U.D.C.—Mr. Carey, of London, has reported upon the plans prepared by the surveyor, Mr. A. A. Goodall, for the partial reconstruction and strengthening of the promenade pier. On the plans as a whole he considered the scheme satisfactory, but suggested certain alterations in detail. The surveyor was empowered to consult with him in London, with a view to arriving at an agreement for the adoption of his suggestions, and this, it was now reported, he had done, the additional cost of the alterations recommended by the engineer being £750. The plans as approved by Mr. Carey were approved by the council, and the surveyor was requested to proceed with the preparation of the final scheme as now confirmed.

Scarborough T.C.—The council have approved the plans of the borough engineer, Mr. H. W. Smith, for the erection of two blocks of bungalows (twenty in number) and a shelter in the South Cliff Gardens, at an estimated cost of £1,260.

Skipton U.D.C.—It has been decided to build a generating station at an estimated cost of £13,000, to include plant.

Southend T.C.—The Highways and Works Committee have been authorised to provide a women's convenience at Bell Wharf, Leigh, at an approximate cost of £105.

Truro T.C.—In connection with the recent fire at the [illegible] buildings by [illegible] estimated at about £1,500, and it is stated that £1,300 has been [illegible] by the insurance company. It is proposed to make improvements in the course of restoration of the destroyed buildings.

Worcestershire C.C.—In order to provide employment it has been agreed to proceed with the erection of new schools in Watt-close and Stourbridge-road, Bromsgrove; new [illegible] at Droitwich; and new offices at the Shire Hall, Worcester.

Wigton R.D.C.—The surveyor, Mr. T. B. Simmons, has been asked to prepare a plan for a 15-ft. bridge at Caldbeck. It was explained that the county surveyor, Mr. William Finch, had expressed an opinion in favour of a 25-ft. bridge. In the discussion which followed it was generally thought that 25 ft. was too wide for the bridge, and Mr. Lowson said the proposal was ridiculous. The chairman, Mr. W. Williamson, said [illegible] towards the cost of the bridge it would have to be [illegible].

HOUSING AND TOWN PLANNING.

Blofield R.D.C.—Plans are being prepared for the erection of cottages at Acle.

Dorking R.D.C.—A scheme is being prepared for the provision of workmen's cottages in the parish of Effingham.

Warmley R.D.C.—The surveyor, Mr. H. M. Bennett, has received instructions to prepare plans for eight working-class dwellings.

Woking U.D.C.—The council are taking up a loan of £5,500 for a housing scheme.

PARKS AND OPEN SPACES.

Frinton U.D.C.—The surveyor, Mr. E. M. Bate, is preparing a scheme for the improvement of the field [illegible] Park.

ROADS AND MATERIALS.

Bath T.C.—The city surveyor, Mr. C. R. Fortune, reports that when the work now in hand in Boatstall-lane, and the street works, executed by their own staff, between Bridge-street and the south-east corner of the Empire Hotel, were completed, there would be a small excess of expenditure over the £2,400. The work of levelling the old concrete laying on the floor space between the stone pillars supporting the roadway, and works necessary to be done to drain and repair Boatstall-lane to prevent [illegible] cost, but this could be done by workmen of the corporation. Several members of the Surveying Committee declared that the road was a credit to Mr. Fortune and his [illegible].

Crowle U.D.C.—At the request of the county council the urban council have prepared and forwarded an estimate of the cost of widening 3 miles 32 chains of the main road from the new Keadby Bridge to Doncaster to a width of 20 ft.

Edinburgh T.C.—It is intended to take advantage of the erection of the new electric light station at Portobello to cut off the corner at King's-road and the High-street, and make the turn at that point more rounded. It is also proposed to widen High-street and the whole of King's-road right down to the beach.

Hornsey T.C.—The Middlesex County Council have agreed to contribute towards the proposed resurfacing of Muswell Hill-road, Endymion-road, Upper Tollington-park, and Hampstead-lane, district roads in Hornsey. They will pay one-third (£3,122) of the annual instalments of principal and interest on the loan, and the Road Board will contribute a similar sum. In respect to the proposed improvement of Hornsey-lane, Crouch End-hill, and Tottenham-lane, subsidised roads in Hornsey, the county council have agreed to pay annual loan charges not exceeding £2,924, which will represent two-thirds of the cost to the Hornsey Town Council.

Neath R.D.C.—A proposal has been made for the construction of a new road to give work for the unemployed, and the Road Board are to be asked to make a grant in aid of the cost.

Norfolk C.C.—The county surveyor, Mr. T. H. B. Hyslop, reported recently to the Eastern Highways Committee that in various parts of the county they had been obliged to use increased quantities of materials, owing to the heavy traffic entailed by military operations. He had been asked by the Officer Commanding the Royal Engineers in the district to supervise the making up of the roads in the various military camps. His hands were already fairly full in attending to the construction of the new military road across the county, and in other works, but if it was the committee's desire he would undertake this additional duty. The chairman said he had no doubt that the committee wished the [illegible] undertaking [illegible]

[illegible]—It has been agreed by the Western Highways Committee to carry out the proposed improvement to the Hunstanton and Wells main road at [illegible], the Government having given the necessary grants in aid for widening.

Rowley Regis U.D.C.—The Road Board have stated that they are prepared to make a grant of £270 being half the estimated cost of improving the main road at Oldbury-road, Black Heath, as a means of providing work for the unemployed during the war, and that the balance of the expenditure should be borne by the county council and district council in equal proportions.

Southend T.C.—The council have agreed to apply to the Local Government Board for sanction to a loan of £135 for the purpose of slab-paving the footpath of London-road, between Trinity Church and Ashburnham-road; also for sanction to a loan of £103 for the purpose of slab-paving the footpath on the east side of Seaview-road between Boscombe-road and Southchurch-road, and between Guildford-road and the houses north of Coleman-street. A resolution has also been passed to make up Sandbagh-road, Westcliff, under the Private Street Works Act; and it was reported that a portion of Riviera-drive, Southchurch, had been placed on the list of streets to be made up.

Swansea T.C.—It is understood that sufficient property has now been obtained for rounding off the Castle-Temple streets corner, and that the cost to be incurred will be (including the £6,000 originally expended) not more than £12,000. It is stated that difficulties of an insurmountable character were encountered in regard to a proposal that at the same time Temple-street should be widened.

Truro R.D.C.—The surveyor, Mr. S. Gilbert, has prepared an estimate for a new road commencing at a junction with the Perth-ker-Tolverne road, near Trevean Cottage, and terminating at Coombe.

Tyrone C.C.—Upon the recommendation of the surveyor for the Southern Division, it has been resolved to acquire a quarry by the Clogher rural district at Tullyvar, at a cost of £1,620.

Wolverhampton T.C.—The council have accepted the following tenders of Mr. Arthur Holloway in connection with the construction of new streets: £1,131 for Ashmead-street and Gower-street, £1,168 for [illegible]-street, Greenacre, and £491 for Argyle-road.

Worcestershire C.C.—In connection with the proposed work owing to the war, several road improvement schemes have been adopted, including putting in slag foundations and remaking roads at Kidderminster, Oldbury, Stourbridge, and Stourport.

SEWERAGE AND SEWAGE DISPOSAL.

Bulkington U.D.C.—Some months ago an inspector of the Local Government Board visited the district to inquire into sanitary and other matters, and as the outcome of his report the local authority were called upon to proceed with a sewerage scheme. Mr. F. C. Cook, engineer and surveyor to Nuneaton Town Council, was called in to advise the Bulkington Council, and, acting in conjunction with the local surveyor, a scheme was prepared. Owing to the natural formation of the district, various difficulties and obstacles had to be overcome, and this made a considerable difference to the expense. A scheme with an outfall to the west of the London and North-Western Railway was placed before the Local Government Board, and they have given their sanction to the proposal and to the raising of a loan of £8,500.

Dewsbury T.C.—A letter has been received from the West Riding Rivers Board stating that unless plans and scheme for the extension and improvement of the Thornhill sewage works are submitted to the Local Government Board by January 31st next legal proceedings will be considered.

Hunsworth U.D.C.—The council have accepted the tenders of Messrs. R. Slinger & Sons, at £3,804, and the Sandix Engineering Company, at £375, in connection with the sewerage scheme.

Longridge (Lancs) U.D.C.—The tender of Ames-Crosta Sanitary Engineering Company, Limited, Nottingham, has been accepted for the supply of a patent "Simplex" rotary sprinkler.

Nuneaton T.C.—The tender of Ames-Crosta Sanitary Engineering Company, Limited, of Nottingham, has again been accepted for a further installation of their patent "Simplex" rectangular sprinklers.

Ossett T.C.—Under the local Act of Parliament it has been resolved by the council to make a charge for the admission of trade effluents into the sewers of 1½d. per 1,000 gallons for crude sewage, 1d. for partly treated sewage, and ½d. where the millowner complied with all the requirements as to the provision of tanks and filters.

Southend T.C.—Authority has been given the Highways and Works Committee to accept the lowest satisfactory tenders for the making up or sewering of Southsea-avenue and Vernon-road, Leigh; St. George's Park-avenue, Westminster-drive, and a back passage at Westcliff; and Gloucester-terrace, Thorpe Bay.

WATER, GAS, AND ELECTRICITY.

Bedwellty (Mon.) U.D.C.—The surveyor, Mr. D. H. Price, has submitted terms from the Rhymney and Aber Gas and Water Company for supplying Blackwood with water over Twynffald, and including the construction of a surface reservoir on the high ground between Pwllglas and the top of Gordon-road or Plas-road. The estimated cost of the works is £3,500. The consideration of the matter has been deferred.

Hampton U.D.C.—The council have passed a resolution stating that, as at present advised, they are unable to support the proposed electricity scheme of the London County Council, and suggesting the better course would be to postpone the matter until after the war, in order that it may be more fully and fairly discussed in all its bearings.

Rhyl U.D.C.—With respect to the water supply to St. Asaph from Rhyl sources, of which complaint has been made by the St. Asaph Rural District Council, it has been agreed by the Rhyl Council to lay a new main to Abergele, the rural council to pay for a new 4-in. main from that town to their district, and Rhyl agreeing to reduce the charge for water to 1s. from 1s. 3d. per 1,000 gallons. This will do away with the proposed pumping plant.

Settle R.D.C.—A scheme has been approved for the extension of the water supply at an estimated cost of £3,400.

Selby R.D.C.—A letter was read last week from the Local Government Board with reference to the decision of the council to hold in abeyance the proposed water supplies to the villages in the council's area, owing to the present high prices for materials. The Local Government Board said they could not regard the reasons given as sufficient to justify the council in postponing the provision of the supplies. It was agreed that the clerk should state, in reply, that the rural council would reconsider the question, and that the surveyor, Mr. R. F. Braithwaite, had received instructions to commence the preparation of estimates and particulars.

Walton-on-Thames U.D.C.—The surveyor, Mr. R. Wilds, reported recently that the Metropolitan Water Board were seeking powers to purchase certain fields and land on the nearer side of the Apps-court pumping station, for the purpose of filter-beds.

West Penwith R.D.C.—Negotiations are proceeding for the provision of a water supply for Carbis Bay.

Wolverhampton T.C.—It has been agreed to make electricity main extensions at a total estimated cost of £1,277.

MISCELLANEOUS.

Southend T.C.—It has been decided to make up the paths at the sanatorium, erect a new coal store, cart shed, and bathroom, and pave the yard, at a total cost of £313.

Wolverhampton T.C.—It was decided last week to accept a tender for the supply of four 25-horse power chassis. It was explained that the town's motor 'buses had been taken off the streets owing to the chassis having been secured by the War Office.

The Civic Engineer's Who's Who, compiled by the editor of The Surveyor and Municipal and County Engineer, **for a second annual issue is remarkably complete. The biographical matter is full and methodically arranged. The book is published by the** St. Bride's Press, Limited.—*Liverpool Courier.*

PERSONAL.

Mr. F. Lloyd, assistant surveyor to the Brownhills Urban District Council, has resigned.

Mr. L. E. Moore has been appointed assistant surveyor to the Manchester Urban District Council.

Mr. W. L. Carr, surveyor to the Ruislip-Northwood Urban District Council, has had his salary increased by £50 per annum.

Mr. Isherwood, Skelmersdale, surveyor to the Uxbridge Rural District Council, has resigned after twenty-eight years' service.

Mr. James Vevers (Accrington), surveyor and inspector, South Queensferry, has been appointed burgh surveyor and inspector of Keith.

Mr. Leslie Rosevear, borough engineer of South Shields, was at a special meeting of the Institution of Civil Engineers, on the 15th inst., transferred from the class of associate member to that of full member.

Institution of Water Engineers.—The concluding instalment of our report of the recent winter meeting of this body will appear in next week's issue.

Sheffield Municipal Schemes.—The Sheffield City Council have decided to promote in Parliament the Derwent Valley Water Bill and the Sheffield Tramways Bill.

Coast Sand Dunes (By Gerald O. Case, St. Bride's Press, Limited, 24 Bride-lane, E.C., price 5s.).—**The rapid increase of sand wastes around our coasts is indeed a serious one, and Mr. Case has done a valuable work in the writing of this book.**—*Southport Guardian.*

Coventry Town Planning Scheme.—A conference has taken place between the committee of the Warwickshire County Council and representatives of Foleshill District Council with reference to the Coventry town planning scheme. So far the Foleshill authorities have asked the county council to assist them to secure that in any order made by the Local Government Board the local body shall have the power of passing or otherwise dealing with, plans relating to their area.

West Riding Rivers Board.—At a meeting of this board on Friday last it was decided to notify the Keighley Corporation that the board cannot consent to any postponement of the scheme of sewage pumping, and that the board hoped to hear within a month or so that the work had been commenced. It was also decided to bring pressure to bear upon a number of other authorities, including Golcar Urban District Council, Barnsley Rural District Council, Doncaster Corporation, Halifax Corporation, Rothwell Urban District Council, and Wombwell Urban District Council, in respect to the carrying out of their works.

Farmers' Objection to Tar-spraying.—Dulverton Rural District Council recently received a letter from the Somerset county surveyor, Mr. E. Stead, asking the council to make application for the usual grant towards tar-spraying the main roads for 1915-16. Farmer members of the council refused to vote for tar-spraying, contending that it was absolutely dangerous for horses, who could not keep their feet on tar-surfaced gradients. That was the experience of practically every farmer in Devon and Somerset. The clerk, Mr. R. Barrow, was backed up by the highway surveyor, Mr. E. Groves, formerly of Liskeard in his contention that tar-surfaced roads were a boon to all living near the highway, and cost less to maintain.—The farmer members were in the majority, and application for the grant will not be made.

FOR OTHER ADVERTISEMENTS

See End of Paper.

THE SANDGATE URBAN DISTRICT COUNCIL

invite applications for the offices of Surveyor, Inspector of Nuisances, Inspector under the Petroleum Acts, and Inspector of Omnibuses and Hackney Carriages.

The duties are to be taken up on 1st February, 1915.

The total salary will be £109 per annum (£50 as Inspector of Nuisances being £50). The appointment as Inspector of Nuisances will be subject to the approval of the Local Government Board.

Offices and clerical assistance are provided. The officer will be required to give his whole time to his duties, and not be allowed private practice. He must reside in the district, give approved security, and enter into an agreement in the form required by the Council.

The duties include those of Surveyor or Engineer in all matters in which the Council may require the services of a surveyor or engineer, including preparation of plans, specifications and estimates, and the carrying out of works; the keeping of accounts relating to the officer's department, and works under his charge, including the main road accounts; the supervision of the foreshore and charge of the main roads, and the Council's waterworks and the sea defences.

Applications (marked "Surveyor" on the envelope), stating age, qualifications, experience, and present employment, and accompanied by copies (which will not be returned) of not more than three recent testimonials, must reach me not later than 9 a.m. on 12th January, 1915, the day fixed for making the appointment.

No forms of application or further information will be furnished. Canvassing will disqualify.

Dated 22nd December, 1914.

J. SHERA ATKINSON,
Clerk to the Council.

Council Offices,
Sandgate, Kent. (2,192)

THE SANDGATE URBAN DISTRICT COUNCIL

invite applications for the offices of Collector, Clerical Assistant in the Office of their Surveyor, and Assistant Overseer for the Parish of Sandgate.

The total salary will be £90 per annum. The Officer will be required to give his whole time to his duties, unless the Council consent to his undertaking other duties.

He must reside in the district, give approved security, and enter into an agreement in the form required by the Council.

The duties will include the collection of general district rates and any other rates levied by the council, and the keeping of the Council's stores accounts, wages books, and main road accounts.

Applications (marked "Collector" on the envelope), stating age, qualifications, experience, and present employment, and accompanied by copies (which will not be returned) of not more than three recent testimonials, must reach me not later than 9 a.m. on 12th January, 1915.

No forms of application or further information will be furnished. Canvassing will disqualify.

Dated 22nd December, 1914.

J. SHERA ATKINSON,
Clerk to the Council.

Council Offices,
Sandgate, Kent. (2,193)

NEWMARKET RURAL DISTRICT COUNCIL.

SOHAM WATER SUPPLY.

TO WELL BORERS AND CONTRACTORS.

The above Council invite Tenders for the Sinking of Well and Borehole, also test pumping to obtain a supply of water for the Parish of Soham.

Specifications of the works proposed may be obtained from the Engineers, Messrs. Sands & Walker, Milton Chambers, Nottingham, on payment of Two Guineas, which will be returned on receipt of *bonâ-fide* Tender (not afterwards withdrawn) and the return to the Engineers of all documents lent to the Contractor.

The accepted Contractor will be required to provide a guarantee bond for £200 from an office approved by the Council.

The lowest or any Tender not necessarily accepted.

Sealed Tenders, endorsed "Boring," to be sent to the undersigned on or before the 11th day of January, 1915.

By order,
F. J. BLACKBOURN,
Acting Clerk to the Council.

Dean Chambers,
Newmarket.
December 21, 1914. (2,191)

A Recent Development of the Sewage Problem.

DISCUSSION AT WORKS MANAGERS' ANNUAL MEETING.

[illegible] Meeting [illegible] Sewage Disposal Works [illegible] Mr. [illegible] Ardern, M.Sc., presented a paper on the subject of [illegible]

The Chairman (Dr. [illegible]) remarked that [illegible] the author in the matter of introducing air or oxygen to sewage. After all the sewage problem consisted of two things: either bring air to the sewage or the sewage to the air; the latter was done by way of filters, the former by the way described that evening.

Mr. S. Lowcock, as one who years ago had done a good deal of work in connection with the oxidisation of sewage, agreed that it did not make any difference, as far as principle went, whether they treated the sewage in the presence of what was really activated sludge on the grains of the filter, or blew air through the sewage, which was not at all a new idea. Dr. Angus Smith used mechanical air purification of sewage thirty-two years ago, and showed the formation of nitrates were so facilitated, just as the author and Dr. Fowler now contended. He keenly appreciated the system, which obviously would be an exceedingly useful thing where there was not room for filters. He had not the slightest doubt it could be done satisfactorily; but to his mind the whole question was one of cost. If they adopted quiescent treatment, and took 20 per cent of the tank capacity for activated sludge, then they would have largely to increase their tank accommodation, and in many cases there would be large engineering difficulties in filling and emptying the tanks within a reasonable time. The author had said nothing as to the cubic feet of air which had to be supplied at some definite pressure. With this information they might be able to form some idea of the cost.

The Chairman reminded the meeting that the American experiments in this direction had produced negative results at first. Oxidisation by means of warm air was a rather recent idea, but they all knew that nitrification took place more readily in summer than in winter. This had also been noted in India. The American experiments were all based on the idea that there should be some medium which should be a contact material between the air forced in and the sewage itself, and a good many of the earlier experiments on introducing air directly so as to bring about oxidisation failed to realise that important point. The first method was only that of blowing air through, but as water would only hold a certain amount of oxygen, there had to be a continual series of treatment.

Dr. G. J. Fowler said the reason he felt sure that this was going to be a success was that the process described was not in the nature of a lucky shot. It was really the coping stone of years of investigation—the culminating result of a large number of experiments in various places. He described in some detail his own work at Manchester, where he was obsessed with the idea of oxidising everything. It never occurred to him to separate the clear liquid from the sediment; in fact, he threw away the baby with the bath. In America he was much impressed with what had been done in the St. Lawrence laboratories, where they had more or less oxidised sewage in a twenty-four hours' blow, and when he returned he spoke to the president of the Sewage Commission suggesting it was rather a good thing to try something on those lines; but the president of the commission said that it was just the old percolating filter over again. They thought of chemicals, but with 1,000 million gallons a day to deal with the cost was prohibitive. The only practicable idea then was sludge steamers; but they set to work to try to develop a process which should be independent of surface in the ordinary sense. The result rather came to this, that for practical purposes all that aëration could do was to render the sewage a little more stable; still the idea was to work with aëration alone, and sufficient attention had not been paid to the sludge matter present. Having described the progress of his experiments with Captain Mumford, he remarked that what was important in them was that they demonstrated the possibility of absolute clarification without any filter at all, and the deposit which they got from settled domestic sewage contained at least 10 per cent of nitrates. The reason he thought the new process was going to be a success was because it was a process which dealt with the whole subject and not a part of it. He reminded Mr. Lowcock that in any filter there was a certain imperfection of action, but in Mr. Ardern's work the whole sewage was completely purified. They were all aware that there were points of engineering details which would have to be settled, but they were rapidly being settled; but all they wanted to do at present was to emphasise the fact that the principle was proved. It would be premature to go into engineering details. He insisted that for the first time there was really a possibility of tackling the nitrogen question.

Mr. S. E. Melling, county analyst (Cheshire), gave a short account of the work at Salford following on the Manchester experiment, and explained the roughing filters designed by the late borough engineer, Mr. Corbett, whose function was to remove the suspended matter left in the tank effluent before passing on to the percolating filter. The sewage question was acute in Salford, and faced with expense; they desired to keep down cost as much as possible. The only rational method seemed to him along the lines of the Manchester experiment. With a twelve-hour blow they got results similar to those in Table 4, and the question was cutting down the time of aëration. In the end they cut down the time to two hours, and got from 85 to 87 per cent of purification with a highly clarified effluent.

Mr. W. H. Duckworth (Salford) said with a three hours' blow they got results which were some justification for what they were doing. He further explained the tables, and said that a feature of the work was that the plant they had used had been intended for something entirely different. They made no claim at all that it was the best plant, for it was only a beginning. He had no doubt that somebody in the near future would design something infinitely better, and perhaps infinitely cheaper. He explained the method of blowing the air, and opined that it was pregnant with possibilities. There was no secret about the matter, and he invited, on behalf of his committee, anyone to go and see what was being done. He particularly called attention to the clear definition of the line of demarcation between the liquid and the sludge.

Mr. W. J. Lockett desired publicly to express his appreciation of the work of Mr. Melling and Mr. Duckworth, and said he considered the results achieved at Salford were very valuable.

Mr. A. P. I. Cottrell (Westminster and Bristol) said he felt the greatest respect for those who were carrying on these experiments, which he hoped would continue. As an engineer, he was always ready to have his preconceived notions upset. He agreed that the system described was really a new application of an old principle which produced the changes described. He wondered, however, if it could be applied on any large scale at a reasonable cost. No figures had been given them. Tank accommodation would doubtless have to be 20 per cent greater. One point interested him greatly—viz., they were told that the resultant sludge was very much more valuable than sludge obtained in ordinary works. Sir Wm. Crookes had pointed out that we were pouring £15,000,000 a year into the sea, and if they could save some of that waste by this system it was of the utmost importance.

Mr. E. Mather (Salford) expressed his appreciation of the attention which the association was giving to the subject. In view of the large sums vainly spent on sewage works in the past, sanitary authorities were rather shy of new methods which cost much money. He suggested the advisability of an expert committee being appointed to go into the question as a whole.

Mr. J. H. Abbott (Chiswick) asked how many weeks of blowing it took to get the sewage into the initial stage of activity.

The Chairman, referring to Mr. Mather's remarks, said the time was hardly ripe for a committee. The

Royal Commission was still sitting, and no one knew how much longer they would sit. As to more actual details, these would take some time to complete, and there would be further opportunities of discussing the problem.

Mr. ANDREWS, replying to the debate, thanked the meeting sincerely for the kind way they had received his paper. It was essential that the sewage should be in addition to dealing with the sewage dealt with. He was not in a position to state the question of cost, which was the question of course. The idea of increased tank accommodation was the reverse of what obtained. With a certain class they could get so many gallons per day and so on by increasing the tank accommodation, this system would tend to reduce it. When they got superior results the cost was relatively much smaller. In their experiment they had not used more than 6 gallons per square foot of tank area per hour. They were something definite that would enable them to form some approximate calculation as to the cost. On that basis the cost should not exceed the cost of present chemical treatment. As to sludge tanks with greater pressure [illegible] of dealing with a larger volume of sewage that remained to be worked out; but in considering maintenance they must not lose sight of the tremendous reduction in capital outlay. There would be a very wide margin. They had no specific data as to the value of the sludge beyond the raising of its characteristics. It was absolutely granular, and the water left it rapidly. It could be handled easily by simple straining filters. Mr. Abbott had touched a weak spot, the initial production of the activated sludge. It depended on the strength and character of the sewage; the original experiments took five weeks, and three weeks with pure domestic sewage. On this point more information was required, without doubt.

SOCIETY OF ENGINEERS.

ANNUAL GENERAL MEETING.

The 54th annual general meeting of the Society of Engineers (incorporated) was held at the offices of the society, 17 Victoria-street, Westminster, on Monday, December 14th.

The awards of premiums made in respect of papers published in the Journal of the Society during 1914 were announced as follows:

The President's Gold Medal to Mr. A. S. E. Ackermann for his paper on "The Utilisation of Solar Energy."

The Bessemer Premium, value £5 5s., to Mr. A. S. Buckle for his paper on "Cylinder Bridge Foundations in the East."

The Clarke Premium, value £3 3s., to Mr. S. M. Dickinson for his paper on "Mechanical Appliances for the Painless Killing of Animals."

The premium, value £3 3s., for members of affiliated societies, to Mr. R. H. Cunningham (Crystal Palace Engineering School) for his paper on "Irrigation in India."

A society's premium, value £2 2s., to Mr. James Lodge for his paper on "Uses of the Hydraulic Mining Cartridge."

The report of the council, which was adopted, referred to the amendments that are being made in the articles and by-laws, and stated that the financial position of the society was satisfactory. A list of members of the society serving with the Allied Forces was included in the report. The scrutineers of the postal ballot reported that the following had been elected as members of the council and officers for 1915: President, Norman Scorgie; vice-presidents, Percy Griffith and Henry C. Adams; members of council, Henry Adams, C. T. Walrond, S. Cowper-Coles, B. H. M. Hewett, F. H. Hummel, G. A. Becks, F. L. Ball, W. B. Esson, G. O. Case, and W. N. Twelvetrees; associate-member of council, C. E. May; hon. secretary and hon. treasurer, D. B. Butler.

Messrs. Begbie, Robinson & Cox, chartered accountants, were reappointed as auditors for the year 1915. Votes of thanks to the council and officers for 1914, and to the scrutineers of the ballot lists for the election of the new council, were passed unanimously.

Golder's Green Crematorium.—During the twelve months ended October 31st last, 651 cremations were carried out at Golder's Green, as against 598 in the preceding twelve months.

DIARIES AND CALENDARS.

Messrs. Rees of Nottingham [illegible] their diaries for 1915. One [illegible] at an [illegible] bound in black leather, and is of a size that permits it to be carried in the coat-pocket. The other is the firm's popular scribbling [illegible] with blotting paper, [illegible] worth. The price of the first-mentioned diary is not [illegible].

The Lancashire and Lancashire Fire Insurance Company, Limited, Liverpool, have issued a wall calendar [illegible] variety of useful information, space for daily memoranda [illegible].

The diary of Messrs. Hay and Bird [illegible] 187-201 Union-street, Borough, London, S.E., [illegible] and machine production. It comprises [illegible] to the above purpose, and [illegible] descriptive of the firm's numerous specialities, among which may be mentioned their well-known pavement, floor and roof lights, prismatic glazings and reflectors, fireproof staircases, ventilators, casements, lead glazing and steel skylights and domes. Full particulars as to prices are given.

A vividly drawn fire picture is an appropriate feature of Messrs. Merryweather & Sons' wall calendar for 1915. On the back of the calendar the firm call attention to the [illegible] and pumps which they have issued, and which are obtainable on application to them at their works, at Greenwich, S.E.

Prestwick Sewerage Extension. The work of extending the main outfall sewer at Prestwick, Ayrshire, to include a new drainage district, has just been completed at a cost of over £5,000.

INSTITUTION OF MUNICIPAL AND COUNTY ENGINEERS.

NOMINATIONS FOR COUNCIL, 1915-16.

The attention of members and associate-members of the Institution of Municipal and County Engineers is directed to By-law 11, and particularly to the following portions thereof:—

". . . each member or associate-member of the institution shall be at liberty to nominate one member or associate-member for the council. . . . Members' or associate-members' nominations must be received by the secretary not later than 1st February in each year, and must be accompanied by the written consent of the nominee. . . ."

It should also be noted that, under the provisions of By-law 10, no nomination paper or ballot list will be sent to any member or associate-member whose subscription for the year commenced May 1, 1914, remains unpaid.

(By order of the council)
J. W. DUDLEY ROBINSON,
Secretary.

92 Victoria-street, S.W.
December 21, 1914.

APPOINTMENTS VACANT.

OFFICIAL AND SIMILAR ADVERTISEMENTS RECEIVED UP TO 4.30 P.M. ON THURSDAYS WILL BE INSERTED IN THE FOLLOWING DAY'S ISSUE, *but those responsible for their despatch are recommended to arrange that they shall reach* THE SURVEYOR *office by noon on* WEDNESDAYS *to ensure their inclusion in the weekly list of summaries. Such advertisements may, in cases of emergency only, be telephoned (City No. 1046) subject to later confirmation by letter.*

PARKS SUPERINTENDENT. December 26th. Corporation of Manchester. £500 per annum. Mr. T. Hudson, town clerk.

SURVEYOR'S ASSISTANT.—December 27th.—Wath-upon-Dearne Urban District Council. £85 per annum.—Messrs. Nicholson & Co., clerks.

CLERK OF WORKS.—December 28th.—Gower Rural District Council. £3 per week.—Mr. H. J. Ind, clerk, Central Buildings, Fisher-street, Swansea.

BOROUGH SURVEYOR.—December 29th.—Corporation of Sandwich. £150 a year.—Mr. E. C. Byrne, town clerk.

CITY ENGINEER AND SURVEYOR.—Ladies [illegible] Mr. J. [illegible] Head, Port-of-Spain, Trinidad, B.W.I.

ASSISTANT ENGINEERS [illegible] Secretary, Crown Agents for the Colonies, 4, Millbank, London, S.W.

ASSISTANT ENGINEERS [illegible] Secretary, Crown Agents for the Colonies, 4, Millbank, London, S.W.

BOROUGH ENGINEER AND SURVEYOR AND ASSISTANT SURVEYOR [illegible]

MUNICIPAL COMPETITIONS OPEN.

OFFICIAL AND SIMILAR ADVERTISEMENTS RECEIVED UP TO 3.30 P.M. ON THURSDAYS WILL BE INSERTED IN THE FOLLOWING DAY'S ISSUE. [illegible] THE SURVEYOR office by noon on WEDNESDAYS is earnestly requested in order to ensure their insertion in the current issue. Such advertisements may, in cases of emergency only, be telephoned (City No. 1076) subject to later confirmation by letter.

[illegible]

HOVE.—ASSISTANT [illegible]

LIVERPOOL.—January 25th.—Designs [illegible] for the corporation.—Premiums £100, £50, and £25.—Mr. E. R. Pickmere, town clerk.

WALTHAMSTOW.—Plans [illegible] at an estimated cost of £16,000, for the urban district council.—Mr. C. S. Watson, clerk, Town Hall.

BRADFORD.—Designs for the re-planning of streets in the central area of the city, for the corporation.—Mr. Reginald Blomfield, R.A., has been [illegible] Mr. F. Stevens, town clerk.

MUNICIPAL CONTRACTS OPEN.

OFFICIAL AND SIMILAR ADVERTISEMENTS RECEIVED UP TO 3.30 P.M. ON THURSDAYS WILL BE INSERTED IN THE FOLLOWING DAY'S ISSUE. [illegible] for their despatch are recommended to arrange that they shall reach THE SURVEYOR office by noon on WEDNESDAYS in order to ensure their insertion in the current issue. Such advertisements may, in cases of emergency only, be telephoned (City No. 1076) subject to later confirmation by letter.

Buildings.

WEST STOW.—December 28th.—For the [illegible] Mr. W. L. Jenkins, county surveyor, Shire Hall, Bury St. Edmunds.

NANTWICH.—December 29th.—For the erection of eight workmen's houses, for the rural district council.—Mr. C. E. Davenport, architect, 152 Hospital-street, Nantwich.

EAST STOW.—December 30th.—For the erection of working-class dwellings, for the rural district council.—Mr. H. E. Wilkes, clerk, Council Offices.

BEBINGTON.—December 30th.—For the erection of a school, for the Sub-committee for Education.—Messrs. E. Kirby & Son, architects, 5 Cook-street, Liverpool.

UPTON-UPON-SEVERN.—December 31st.—For the construction of water supply works, for the rural district council.—Messrs. Willcox & Raikes, Union Chambers, 63 Temple-row, Birmingham.

DOCKING.—December 31st.—For the erection of six houses, for the rural district council.—Mr. J. A. Stoughton, clerk, Fakenham, Norfolk.

UXBRIDGE.—December 31st.—For repairs to hospital buildings and the erection of a laundry, for the Joint Hospital Board.—Mr. W. L. Eves, surveyor, 54 High-street, Uxbridge.

SURREY.—December 31st.—For the provision and erection of permanent buildings of light construction for school clinics and tuberculosis dispensaries, for the county council.—The Surveyor, County Education Offices, Penrhyn-road, Kingston-upon-Thames.

BATTERSEA.—January 1st.—For the erection of [illegible] for the borough council.—Mr. W. Marcus Wilkins, town clerk.

PORTHCAWL.—January 4th.—For the construction of about 3¼ miles of cast-iron mains, and other minor works, for the urban district council. The Surveyor.

ALICANTE.—January 5th.—For the construction of the first section of the provisions market, for the municipality.—Commercial Intelligence Department of the Board of Trade, 73 Basinghall-street, London, E.C.

CHEPPING WYCOMBE.—January 5th.—For the construction of a ferro-concrete bridge on the Hennebique system, and laying a short length of sewer and surface-water drain, for the corporation.—Mr. T. J. Rushbrooke, borough engineer and surveyor.

BINGHAM.—January 6th.—For the erection of six workmen's houses, for the rural district council. Mr. C. W. Kendrick, sanitary surveyor, Bingham.

FAVERSHAM.—January 7th.—For laying cast-iron pumping main, supply mains, with all necessary fittings, and the construction of a new service reservoir, for the rural district council.—Mr. H. Howard Humphreys, engineer, 28 Victoria-street, Westminster, S.W.

WANDSWORTH.—January 9th.—For [illegible] to a public library, for the borough council.—Mr. P. Dodd, borough engineer, 215 Balham High-road, S.W.

BRISTOL.—January 11th.—For the erection of a ferro-concrete tobacco warehouse, for the Docks Committee.—Mr. W. W. Squire, engineer, Cumberland-road, Bristol.

BOMBAY.—March 7th (date extended).—For the erection and equipment of a refuse destructor, for the Municipal Commissioner.—Messrs. Henry S. King & Co., 65 Cornhill, London, E.C.

Iron and Steel.

BURY.—December 28th.—For the supply of cast-iron castings, for the Joint Water Board. Waterworks Manager, Parsons-lane, Bury.

SEVERN.—December 31st.—For providing, laying, and jointing about 4¼ miles of cast-iron water mains, with valves, hydrants, air valves, and the construction of engine-house and reservoir, for the rural district council.—Messrs. Willcox & Raikes, Union-chambers, 63 Temple-row, Birmingham.

DUNDEE.—December 31st.—For the supply of structural steelwork, for the corporation.—Mr. H. Richardson, manager and engineer, electricity works, Dudhope, Crescent-road.

BIRMINGHAM.—January 6th.—For the erection of the constructional steelwork comprised in boiler-house, engine-house, switch-house, and offices at Nechell's generating station, for the Electric Supply Committee.—Messrs. Harrison & Cox, Council Chambers, 109 Colmore-row, Birmingham.

CONWAY.—January 7th.—For the provision and laying of cast-iron 6-in. and 4-in. water mains, with valves, hydrants, air valves, and chambers, for the rural district council.—Mr. T. L. Oliver, engineer, Stanley Buildings, Conway.

Roads.

STOWMARKET.—December 28th.—For the supply of 69 tons of tar, for the urban district council.—Mr. G. W. Lingwood, surveyor, Butter Market, Stowmarket.

BILLERICAY.—December 28th.—For making up roadways and pathways, for the rural district council.—Mr. H. R. Bird, architect, St. Thomas's-gate, Brentwood.

ELGIN.—December 29th.—For the supply of road materials, for the county council.—Mr. E. D. Jameson, county clerk, Elgin.

HARWICH.—December 30th.—For the supply of 1,000 tons broken granite, as required from time to time, for the corporation.—Mr. F. Harold French, borough surveyor, 41 Church-street, Harwich.

HARWICH.—December 30th.—For steam rolling as required during the year, for the corporation.—Mr. F. Harold French, borough surveyor.

FLINTSHIRE.—December 31st.—For the supply of road materials, tar and cartage, for the county council.—County Surveyor, Mold.

BOGNOR.—December 31st.—For the supply of flat, straight granite kerbing, ditto circular, and composition paving slabs, for the urban district council.—Mr. J. Jubb, clerk.

SOMERSET.—December 31st.—For surface-tarring main roads, for the county council.—Mr. Edward Stead, county surveyor, Wells.

DERBYSHIRE.—December 31st.—For the supply of granite, basalt, slag, limestone, tarred macadam, tarred chippings, and other suitable materials, for the county council.—Mr. J. W. Horton, county surveyor, County Offices, St. Mary's-gate, Derby.

PORTHCAWL.—January 1st.—For making up private streets, for the urban district council.—Mr. A. J. Oborn, surveyor.

CANNOCK.—January 1st.—For the supply of refined tar prepared in accordance with the specification of the Road Board, for the urban district council.—Mr. R. Blanchard, engineer and surveyor.

BROMLEY (Kent).—January 4th.—For works to be executed in the part widening of Mottingham-lane, for the rural district council.—Mr. R. Craig, highway surveyor, Farnborough, Kent.

NORMANTON.—January 4th.—For work of widening and improving, for the urban district council.—The Surveyor.

HUDDERSFIELD.—January 4th.—For the supply of a motor-driven street sweeping machine, with collecting van attached, for the corporation.—Mr. K. F. Campbell, borough engineer and surveyor.

BEXLEY.—January 5th.—For the supply of highway materials and stoneware socketed pipes.—Mr. W. T. Howse, surveyor.

EASTHAMPSTEAD.—January 5th.—For the supply of granite, slag, limestones, and flints, for the rural district council.—Mr. J. E. Treadwell, surveyor, Council Offices, Bracknell.

MIDDLETON.—January 6th.—For the supply of about 1,000 tons of 4 best granite setts, for the corporation.—Mr. William Welburn, borough surveyor.

GLOUCESTERSHIRE.—January 9th.—For the supply of stone for main roads, for the county council.—Mr. E. S. Sinnott, county surveyor, Shire Hall, Gloucester.

SOMERSET.—January 9th.—For the supply of about 70,000 gallons of refined tar, prepared in accordance with the specification of the Road Board, for the county council.—Mr. Edward Stead, county surveyor, Wells.

LINTHWAITE.—January 11th.—For work of paving with granite setts on concrete, kerbing, flagging, asphalting, and other incidental work, for the urban district council.—Mr. Albert Mallinson, surveyor.

TRING.—January 11th.—For the supply of 12,000 gallons of refined coal tar complying with the Road Board's specification, for the urban district council.—Mr. S. S. Gettings, surveyor.

WOODSTOCK.—January 11th.—For the supply of best hand-picked unbroken stone, best broken stone (2-in. gauge), best double-screened nuts, and binding chippings, for the rural district council.—Mr. A. G. Higgs, clerk.

WORCESTERSHIRE.—January 15th.—For the supply of blast-furnace slag, delivered to railway stations and canal wharves, for the county council.—Mr. C. F. Gettings, county surveyor, Worcester.

UCKFIELD.—January 13th-22nd.—For the supply of road materials, for the rural district council.—Mr. E. W. Ray Johnson, surveyor, Buxted, Sussex.

EAST GRINSTEAD.—January 20th.—For the sale of a steam roller, No. 2,711, by Aveling & Porter.—Mr. Charles Turton, surveyor, 6 High-street, East Grinstead.

CLUTTON.—For the supply of about 10,000 gallons of coal tar complying with Road Board specification, No. 5, specification for tar, No. 2, for the rural district council.—Mr. J. Sumner Dury, clerk.

GLOUCESTERSHIRE.—For surface tarring about 80 miles of main roads at various places, for the county council.—Mr. E. S. Sinnott, county surveyor, Shire Hall, Gloucester.

Sanitary.

DONCASTER.—December 29th.—For scavenging privies and ashpits, and the removal of house refuse, for the rural district council.—Mr. H. Thirlwall, inspector, 7 St. George-gate, Doncaster.

WOKING.—December 30th.—For sewering certain districts, for the urban district council.—Mr. R. Mossop, clerk.

ASHFORD.—January 1st.—For works of drainage of the horse playing field, for the managers of the West London District Schools.—Mr. J. L. Gosling, superintendent.

BULKINGTON.—January 2nd.—For the removal of nightsoil, for the urban district council.—Mr. H. W. Wilson, surveyor, Attleborough, Nuneaton.

MANCHESTER.—January 4th.—For the supply and erection of Venturi meters, cast-iron pipes, valves, and contingent works at Davyhulme sewage works, for the corporation.—Secretary, Rivers Department, Town Hall.

DOVER.—January 4th.—For the collection and disposal of house refuse, for the corporation.—Mr. W. C. Hawke, borough engineer.

GREAT HARWOOD.—January 9th.—For alterations and extensions at sewage disposal works, for the Joint Sewerage Board.—The Engineers, Martholme, Great Harwood, Lancs.

KILKENNY.—January 16th.—For the construction of main drainage, for the corporation.—Mr. J. F. Reade, engineer, 29 Baronstrand-street, Waterford.

DARLASTON.—January 21st.—For the construction of stoneware pipe sewers, manholes, cast-iron pipes, tanks, filters, and other works, for the urban district council.—Messrs. Dodd & Dodd, County Chambers, Corporation-street, Birmingham.

CHAILEY.—January 29th.—For works of sewerage, for the rural district council.—Mr. H. Bertram Nichols, engineer, 11 Victoria-street, Westminster, S.W.

Stores.

HASTINGS.—December 28th.—For the supply of manhole covers, gullies, ash-collecting tubs, brooms and brushes, for the corporation.—Mr. P. H. Palmer, borough engineer.

SUNDERLAND.—December 29th.—For the supply of street lamps, fire hydrants, gullies, manhole covers, asphalting, kerbing, sanitary pipes, and disinfectants, for the rural district council.—The Surveyor.

WOMBWELL.—January 1st.—For the supply of wrought-iron steam tube and fittings, main cocks, pendants, brackets, brass fittings, brooms, and other sundries, for the urban district council.—Mr. P. D. Walmsley, engineer and manager, Gasworks, Wombwell.

WANDSWORTH.—January 1st.—For the supply of blue bricks, castings, cement, disinfectants, road materials, salt-glazed ware pipes, street lamp columns, vans, carts, woodpaving blocks, and house refuse collection, for the borough council.—Council House, Wandsworth, S.W.

SLOUGH.—January 2nd.—For the supply of gas mantles, Portland cement, distilled tar, screened shingle, and prepared tar-macadam, for the urban district council.—The Surveyor, 4 William-street, Slough.

JANUARY.

6. Institute of Sanitary Engineers: Mr. A. P. I. Cotterell, M.INST.C.E., delivers his presidential address. Caxton Hall, Westminster. 8 p.m.

TENDERS WANTED.

OFFICIAL AND SIMILAR ADVERTISEMENTS RECEIVED UP TO 4.30 P.M. ON THURSDAYS WILL BE INSERTED IN THE FOLLOWING DAY'S ISSUE, *but these responsible for their despatch are recommended to arrange that they shall reach* THE SURVEYOR *office by noon on* WEDNESDAYS *to ensure their inclusion in the weekly list of summaries. Such advertisements may, in cases of emergency only, be telephoned (City No. 1046) subject to later confirmation by letter.*

BOROUGH OF PLYMOUTH.

Notice is hereby given that, after the expiration of 10 days from the date hereof, the Corporation intend to enter into Contracts for the supply of the following Goods and Materials for one year:

Schedule No. 3.—Section A, Paints.
Section B, Varnishes.
" 6.—Ironwork.
" 7.—Petroleum Oil.
" 8.—Breeziheads.
" 9.—Household Brushes.
" 10.—Rope.
" 11.—Iron and Steel.
" 13.—Pitchpine, Deals, Flooring, &c.
" 14.—Carbolic Powder.
" 15.—Portland Cement.
" 16.—Lubricating Oils.
" 17.—Tar and Pitch, includes Refined Tar for use in the construction of Tarred Macadam Roads and for Tar-spraying.
" 18.—Painters' Brushes.
" 19.—Explosives.
" 22.—Soap.
" 23.—Wood Blocks, Soft.
" 24.—Creosote.
" 28.—Disinfectant Fluid (Bacteriological Test).
" 29.—Granite Kerbs, Setts, &c.
" 30.—White Lead, Red Lead, Linseed Oil, and Turpentine.
" 31.—Refilling Machine Revolving Brooms.
" 33.—Benzoline and Motor Spirit.
" 34.—Tools.
" 35.—Indiarubber Goods, Hose, &c.
" 36.—Ship Chandlers' Goods (Sundry Oils, Waste, Grease).

Tenders must be based on the whole of a Schedule (with the exception of Schedules Nos. 3, 22, 29 and 36), and not on any particular item contained therein.

(Separate Tenders will be considered for Sections A and B of Schedule No. 3.)

Schedules may be obtained on payment of a deposit of £1 in cash for each Schedule. The deposits on the Schedules will be returned, provided *bonâ-fide* Tenders are received on or before the 16th January, 1915. Should the Contractor withdraw his Tender, or fail to send in one, the amount of his deposit will be forfeited, and the Contractor who applies for the Schedules must do so on the distinct understanding that he is willing to abide by the terms of this advertisement.

The lowest or any Tender will not necessarily be accepted.

Tenders to be delivered not later than Saturday, January 16, 1915, addressed to the undersigned.

JAMES PATON,
Borough Engineer and Surveyor.

Municipal Offices,
Plymouth.

THE SPORTSMAN'S BATTALIONS
ROYAL FUSILIERS

[illegible]

A second Battalion of Sportsmen and their friends is now being formed. Application to join the Sportsman's Battalion should be made personally at the Recruiting Office, [illegible] Kingsway, between the hours of 10 a.m. and 4 p.m. [illegible]

join, every effort will be made to allocate to them [illegible] training and while on active service.

Most authorities are paying part or all the salaries [illegible] their King and Country in this hour of need.

Both Battalions are housed and trained in private [illegible] branches of sport and professional gentlemen are being drilled under the best possible conditions by experts and officers who enjoy the confidence of both the [illegible]

Applicants [illegible] at present town.

Fall in now with your colleagues in this famous Regiment, which will probably be among the very first to go to the Front.

For further [illegible] apply to

W. MAUGHAN,
Assistant Recruiting Officer.

The Sportsman's Battalions,
Royal Fusiliers,
[illegible] W.C. 2,190.

APPOINTMENTS OPEN.

PORT-OF-SPAIN CITY COUNCIL.

The Council invite applications for the combined posts of City Engineer and Engineer of the Port-of-Spain Water and Sewerage Works.

2. The salary attached to the post of City Engineer is £[illegible] a year and to that of Engineer of Water and Sewerage Works £[illegible] a year, with travelling allowance at the rate of £[illegible] a year.

3. The intention of the Council being that the two posts of "City Engineer" and "Engineer of Water and Sewerage Works" should be held by the same person, every application must be for the two posts combined.

4. The offices are pensionable under the Port-of-Spain Corporation Ordinance, 1914.

5. The appointment so far as concerns the post of Engineer of Water and Sewerage Works, is subject to the approval of the Governor.

6. Candidates must be corporate members of the Institution of Civil Engineers of England, and must possess experience in the design, construction, and maintenance of waterworks and sewerage systems.

7. Applications, accompanied by not less than three recent testimonials, and stating age and previous experience, must be supported by satisfactory evidence that the candidates possess the qualifications set forth in the preceding paragraph of this notice, and must be forwarded so as to reach the undersigned not later than the [illegible] January, 1915.

8. Candidates must also forward with their applications a medical certificate of fitness for service in the West Indies.

9. The successful candidate will be required to furnish a bond with an approved surety in the sum of £500 for the due performance of the duties of the above offices. He will be required to devote his whole time to the service of the Corporation, and to reside in the City of Port-of-Spain, or within one mile of the limits thereof; and he must be prepared to enter upon the duties of the appointment within one month from the date of the receipt by him of the official notice of his appointment.
